| <b>Preface</b>  | <b>v</b> |
| <b>Introduction</b>   | <b>1</b> |
| <b>Chapter I    General properties of nonlinear operators of Fejér type</b>         | <b>3</b> |
| 1    The main classes of nonlinear mappings . . . . .                               | 3        |
| 1.1    (Quasi-)nonexpansive and pseudo-contractive<br>operators . . . . .           | 3        |
| 1.2    Structure of the set of fixed points . . . . .                               | 7        |
| 1.3    Existence of fixed points . . . . .  | 8        |
| 2    Strong convergence of iterations for quasi-nonexpansive<br>operators . . . . . | 9        |
| 2.1    The case of demi-compact operators. . . . .                                  | 10       |
| 2.2    The case of a linear operator . . . . .                                      | 11       |
| 2.3    Iterative processes for linear equations of the first<br>kind . . . . .      | 12       |
| 3    Properties of iterations for the pseudo-contractive mappings                   | 16       |
| 3.1    The main theorem on convergence of iterations. . .                           | 16       |
| 3.2    Superpositions of pseudo-contractive operators. . .                          | 19       |
| 3.3    Examples of the pseudo-contractive operators . . .                           | 20       |
| 4    Iterations with the correcting multipliers . . . . .                           | 25       |
| 4.1    Stability of fixed points on parameter . . . . .                             | 25       |
| 4.2    One-step iterative process . . . . .   | 27       |
| 4.3    Asymptotic rule for stopping the iterations . . . . .                        | 29       |
| 5    Fejér mappings and sequences. . . . .  | 31       |
| 5.1    Definitions and general properties . . . . .                                 | 31       |
| 5.2    Examples of Fejér mappings . . . . .   | 33       |
| 5.3    Weak-Fejér mappings and sequences . . . . .                                  | 35       |
| 6    Theorems on convergence of Fejér processes . . . . .                           | 36       |
| 6.1    The case of the single-valued operator. . . . .                              | 36       |

|                    |  |           |
|--------------------|--|-----------|
| 6.2                | The case of the multi-valued Fejér mappings . . . . .  | 37        |
| 7                  | $M$ -separating pairs and $M$ -Fejér mappings . . . . .  | 39        |
| <b>Chapter II</b>  | <b>Applications of iterative processes to nonlinear equations</b>  | <b>43</b> |
| 1                  | Gradient methods. . . . .  | 43        |
| 2                  | The Newton–Kantorovich method. . . . .   | 46        |
| 3                  | Fejér processes for mixed problems . . . . .   | 47        |
| 3.1                | Systems of nonlinear equations and convex inequalities . . . . .   | 47        |
| 3.2                | Linear case . . . . .  | 49        |
| 4                  | Nonlinear processes for linear operator equations . . . . .  | 50        |
| 4.1                | Iterative $\alpha$ -processes and extremal principles . . . . .  | 50        |
| 4.2                | Inequality for moments and pseudo-contractivity of the step operator . . . . .                                   | 52        |
| 4.3                | Convergence of the $\alpha$ -processes . . . . .   | 53        |
| 5                  | Linearized versions of the gradient methods . . . . .  | 55        |
| 5.1                | The method of steepest descent . . . . .   | 55        |
| 5.2                | Linearized analogue of the minimal error method . . . . .  | 57        |
| 5.3                | Conclusions and applications . . . . .   | 58        |
| 6                  | The Levenberg–Marquardt method . . . . .   | 60        |
| 6.1                | The idea of the method . . . . .   | 60        |
| 6.2                | Weak convergence of the method . . . . .   | 60        |
| 6.3                | Strong convergence of the modified method.<br>Asymptotic rule for stopping the process . . . . .                 | 63        |
| 6.4                | Stopping the iterations by the residual. . . . .   | 65        |
| 7                  | Ill-posed problems with <i>a priori</i> information . . . . .  | 65        |
| 7.1                | Formulation of the problem and convergence theorems . . . . .  | 65        |
| 7.2                | Properties of iterations under noisy data. . . . .   | 69        |
| 7.3                | Taking into account the <i>a priori</i> information in applied problems . . . . .                                | 71        |
| <b>Chapter III</b> | <b>Fejér methods for linear and convex inequalities</b>  | <b>79</b> |
| 1                  | The basic construction of $M$ -Fejér mappings for application to finite systems of linear inequalities . . . . . | 79        |

|     |   |     |
|-----|---|-----|
| 2   | Fejér processes with variable coefficient of relaxation . . .   | 80  |
| 2.1 | The main theorem . . . . .  | 81  |
| 2.2 | Fejér process with the mirror relaxation . . . . .  | 82  |
| 3   | Application of Fejér processes to a system of convex inequalities . . . . .   | 84  |
| 3.1 | Systems of inequalities in $\mathbb{R}^n$ . . . . .   | 84  |
| 3.2 | Systems of inequalities in a Hilbert space . . . . .  | 86  |
| 4   | Systems of convex inclusions . . . . .  | 87  |
| 4.1 | General properties and constructions . . . . .  | 87  |
| 4.2 | Consistent systems of inclusions. . . . .   | 89  |
| 4.3 | Convergent processes for inconsistent systems of inclusions . . . . .   | 91  |
| 4.4 | Cycles of immobility for inconsistent systems of convex inequalities . . . . .  | 93  |
| 5   | On the rate of convergence of Fejér processes . . . . .   | 95  |
| 6   | Fejér methods and nonsmooth optimization. . . . .   | 97  |
| 6.1 | Problem of the saddle point of the Lagrange function . . . . .  | 98  |
| 6.2 | Method of the exact penalty functions. . . . .  | 100 |
| 6.3 | Fejér methods for the application to systems of convex inequalities and convex programming problems without assumptions of smoothness . . . | 102 |
| 6.4 | The basic process. . . . .  | 104 |
| 7   | Aspects of stability of Fejér processes. . . . .  | 106 |

## **Chapter IV Some topics of Fejér mappings and processes 109**

|     |  |     |
|-----|--|-----|
| 1   | Decomposition and parallelization of Fejér processes . . .                 | 109 |
| 1.1 | Schemes of parallelization . . . . .                                       | 109 |
| 1.2 | Schemes of parallelization for a linear programming problem . . . . .      | 112 |
| 2   | Randomization of Fejér processes . . . . .                                 | 114 |
| 2.1 | General theorems on convergence . . . . .                                  | 115 |
| 2.2 | Some notes on the realization of the processes . . .                       | 117 |
| 3   | Fejér processes and inconsistent systems for linear inequalities . . . . . | 119 |
| 3.1 | Preliminary notes and information. . . . .                                 | 119 |

|     |   |            |
|-----|---|------------|
| 3.2 | Fejér processes for problems of square approximation of inconsistent systems of linear inequalities . . . . . | 121        |
| 3.3 | Transition of results to the case of a system with additional constraints . . . . .                           | 123        |
| 4   | Fejér processes for improper problems of linear programming . . . . .   | 124        |
| 4.1 | The basic approximative-Fejér process for improper linear programming problems of the first kind . . .        | 126        |
| 4.2 | Approximative-Fejér process for improper problems of linear programming of the second kind                    | 128        |
| 4.3 | Fejér process for improper problems of linear programming of the third kind . . . . .                         | 129        |
| 5   | Normalized solutions of convex inequalities . . . . .   | 130        |
| 5.1 | Auxiliary results . . . . .   | 131        |
| 5.2 | Theorems on stability of the fixed points for quasi-contractions . . . . .                                    | 133        |
| 5.3 | Iterative procedure for finding projection . . . . .  | 137        |
| 6   | Fejér processes for inconsistent linear and convex inequality systems . . . . .                               | 139        |
|     | <b>Bibliography</b>   | <b>145</b> |
|     | <b>Notations</b>  | <b>151</b> |
|     | <b>Index</b>  | <b>153</b> |
