

Contents

1	Vector Algebra I: Scalars and Vectors	1
1.1	Scalars and Vectors	1
1.2	Addition of Vectors	5
1.2.1	Sum of Two Vectors: Geometrical Addition	5
1.3	Subtraction of Vectors	7
1.4	Components and Projection of a Vector	8
1.5	Component Representation in Coordinate Systems	10
1.5.1	Position Vector	10
1.5.2	Unit Vectors	11
1.5.3	Component Representation of a Vector	12
1.5.4	Representation of the Sum of Two Vectors in Terms of Their Components	14
1.5.5	Subtraction of Vectors in Terms of Their Components	15
1.6	Multiplication of a Vector by a Scalar	16
1.7	Magnitude of a Vector	17
	Exercises	19
2	Vector Algebra II: Scalar and Vector Products	25
2.1	Scalar Product	26
2.1.1	Application: Equation of a Line and a Plane	28
2.1.2	Special Cases	29
2.1.3	Commutative and Distributive Laws	29
2.1.4	Scalar Product in Terms of the Components of the Vectors	30
2.2	Vector Product	32
2.2.1	Torque	32
2.2.2	Torque as a Vector	34
2.2.3	Definition of the Vector Product	35
2.2.4	Special Cases	36

2.2.5	Anti-commutative Law for Vector Products	37
2.2.6	Components of the Vector Product	37
	Exercises	39
3	Functions	43
3.1	The Mathematical Concept of Functions and Its Meaning in Physics and Engineering	43
3.1.1	Introduction	43
3.1.2	The Concept of a Function	44
3.2	Graphical Representation of Functions	46
3.2.1	Coordinate System, Position Vector	46
3.2.2	The Linear Function: The Straight Line	47
3.2.3	Graph Plotting	48
3.3	Quadratic Equations	51
3.4	Parametric Changes of Functions and Their Graphs	53
3.5	Inverse Functions	55
3.6	Trigonometric or Circular Functions	56
3.6.1	Unit Circle	56
3.6.2	Sine Function	57
3.6.3	Cosine Function	62
3.6.4	Relationships Between the Sine and Cosine Functions	64
3.6.5	Tangent and Cotangent	65
3.6.6	Addition Formulae	66
3.7	Inverse Trigonometric Functions	69
3.8	Function of a Function (Composition)	71
	Appendix: Trigonometric Functions	72
	Exercises	73
4	Exponential, Logarithmic and Hyperbolic Functions	77
4.1	Powers, Exponential Function	77
4.1.1	Powers	77
4.1.2	Laws of Indices or Exponents	78
4.1.3	Binomial Theorem	79
4.1.4	Exponential Function	79
4.2	Logarithm, Logarithmic Function	82
4.2.1	Logarithm	82
4.2.2	Operations with Logarithms	84
4.2.3	Logarithmic Functions	86
4.3	Hyperbolic Functions and Inverse Hyperbolic Functions	88
4.3.1	Hyperbolic Functions	88
4.3.2	Inverse Hyperbolic Functions	90

	Exercises	93
5	Differential Calculus	95
5.1	Sequences and Limits	95
5.1.1	The Concept of Sequence	95
5.1.2	Limit of a Sequence	96
5.1.3	Limit of a Function	99
5.1.4	Examples for the Practical Determination of Limits	100
5.2	Continuity	102
5.3	Series	103
5.3.1	Geometric Series	104
5.4	Differentiation of a Function	105
5.4.1	Gradient or Slope of a Line	105
5.4.2	Gradient of an Arbitrary Curve	106
5.4.3	Derivative of a Function	109
5.4.4	Physical Application: Velocity	110
5.4.5	The Differential	111
5.5	Calculating Differential Coefficients	113
5.5.1	Derivatives of Power Functions; Constant Factors	113
5.5.2	Rules for Differentiation	114
5.5.3	Differentiation of Fundamental Functions	119
5.6	Higher Derivatives	126
5.7	Extreme Values and Points of Inflexion; Curve Sketching	127
5.7.1	Maximum and Minimum Values of a Function	127
5.7.2	Further Remarks on Points of Inflexion (Contraflexure)	131
5.7.3	Curve Sketching	132
5.8	Applications of Differential Calculus	135
5.8.1	Extreme Values	135
5.8.2	Increments	136
5.8.3	Curvature	138
5.8.4	Determination of Limits by Differentiation: L'Hôpital's Rule	140
5.9	Further Methods for Calculating Differential Coefficients	141
5.9.1	Implicit Functions and their Derivatives	142
5.9.2	Logarithmic Differentiation	143
5.10	Parametric Functions and their Derivatives	143
5.10.1	Parametric Form of an Equation	143
5.10.2	Derivatives of Parametric Functions	150
	Appendix: Differentiation Rules	155
	Exercises	156

6	Integral Calculus	161
6.1	The Primitive Function	161
6.1.1	Fundamental Problem of Integral Calculus	161
6.2	The Area Problem: The Definite Integral	163
6.3	Fundamental Theorem of the Differential and Integral Calculus	166
6.4	The Definite Integral	171
6.4.1	Calculation of Definite Integrals from Indefinite Integrals	171
6.4.2	Examples of Definite Integrals	174
6.5	Methods of Integration	177
6.5.1	Principle of Verification	178
6.5.2	Standard Integrals	178
6.5.3	Constant Factor and the Sum of Functions	178
6.5.4	Integration by Parts: Product of Two Functions	180
6.5.5	Integration by Substitution	184
6.5.6	Substitution in Particular Cases	186
6.5.7	Integration by Partial Fractions	191
6.6	Rules for Solving Definite Integrals	196
6.7	Mean Value Theorem	199
6.8	Improper Integrals	201
6.9	Line Integrals	203
	Appendix	208
	Exercises	211
7	Applications of Integration	215
7.1	Areas	215
7.1.1	Areas for Parametric Functions	218
7.1.2	Areas in Polar Coordinates	220
7.1.3	Areas of Closed Curves	221
7.2	Lengths of Curves	224
7.2.1	Lengths of Curves in Polar Coordinates	226
7.3	Surface Area and Volume of a Solid of Revolution	228
7.4	Applications to Mechanics	234
7.4.1	Basic Concepts of Mechanics	234
7.4.2	Center of Mass and Centroid	234
7.4.3	The Theorems of Pappus	238
7.4.4	Moments of Inertia; Second Moment of Area	240
	Exercises	251
8	Taylor Series and Power Series	255
8.1	Introduction	255
8.2	Expansion of a Function in a Power Series	256
8.3	Interval of Convergence of Power Series	260
8.4	Approximate Values of Functions	262

8.5	Expansion of a Function $f(x)$ at an Arbitrary Position	264
8.6	Applications of Series	267
8.6.1	Polynomials as Approximations	267
8.6.2	Integration of Functions When Expressed as Power Series	269
8.6.3	Expansion in a Series by Integrating	272
	Appendix: Commonly Used Approximate Polynomials	273
	Exercises	275
9	Complex Numbers	277
9.1	Definition and Properties of Complex Numbers	277
9.1.1	Imaginary Numbers	277
9.1.2	Complex Numbers	278
9.1.3	Fields of Application	278
9.1.4	Operations with Complex Numbers	279
9.2	Graphical Representation of Complex Numbers	280
9.2.1	Gauss Complex Number Plane: Argand Diagram	280
9.2.2	Polar Form of a Complex Number	281
9.3	Exponential Form of Complex Numbers	284
9.3.1	Euler's Formula	284
9.3.2	Exponential Form of the Sine and Cosine Functions	285
9.3.3	Complex Numbers as Powers	285
9.3.4	Multiplication and Division in Exponential Form	288
9.3.5	Raising to a Power, Exponential Form	289
9.3.6	Periodicity of $re^{j\alpha}$	289
9.3.7	Transformation of a Complex Number From One Form Into Another	290
9.4	Operations with Complex Numbers Expressed in Polar Form	291
9.4.1	Multiplication and Division	291
9.4.2	Raising to a Power	293
9.4.3	Roots of a Complex Number	293
	Exercises	296
10	Differential Equations	303
10.1	Concept and Classification of Differential Equations	303
10.2	Preliminary Remarks	307
10.3	General Solution of First- and Second-Order DEs with Constant Coefficients	309
10.3.1	Homogeneous Linear DE	309
10.3.2	Non-homogeneous Linear DE	315
10.4	Boundary Value Problems	322
10.4.1	First-Order DEs	322

10.4.2	Second-Order DEs	323
10.5	Some Applications of DEs	325
10.5.1	Radioactive Decay	325
10.5.2	The Harmonic Oscillator	325
10.6	General Linear First-Order DEs	334
10.6.1	Solution by Variation of the Constant	334
10.6.2	A Straightforward Method Involving the Integrating Factor	337
10.7	Some Remarks on General First-Order DEs	339
10.7.1	Bernoulli's Equations	339
10.7.2	Separation of Variables	340
10.7.3	Exact Equations	341
10.7.4	The Integrating Factor—General Case	344
10.8	Simultaneous DEs	346
10.9	Higher-Order DEs Interpreted as Systems of First-Order Simultaneous DEs	350
10.10	Some Advice on Intractable DEs	351
	Exercises	351
11	Laplace Transforms	355
11.1	Introduction	355
11.2	The Laplace Transform Definition	355
11.3	Laplace Transform of Standard Functions	357
11.4	Solution of Linear DEs with Constant Coefficients	363
11.5	Solution of Simultaneous DEs with Constant Coefficients	366
	Appendix	368
	Exercises	369
12	Functions of Several Variables; Partial Differentiation; and Total Differentiation	371
12.1	Introduction	371
12.2	Functions of Several Variables	372
12.2.1	Representing the Surface by Establishing a Table of z -Values	373
12.2.2	Representing the Surface by Establishing Intersecting Curves	374
12.2.3	Obtaining a Functional Expression for a Given Surface	377
12.3	Partial Differentiation	379
12.3.1	Higher Partial Derivatives	383
12.4	Total Differential	385
12.4.1	Total Differential of Functions	385
12.4.2	Application: Small Tolerances	389

12.4.3	Gradient	391
12.5	Total Derivative	394
12.5.1	Explicit Functions	394
12.5.2	Implicit Functions	395
12.6	Maxima and Minima of Functions of Two or More Variables	396
12.7	Applications: Wave Function and Wave Equation	403
12.7.1	Wave Function	403
12.7.2	Wave Equation	407
	Exercises	409
13	Multiple Integrals; Coordinate Systems	413
13.1	Multiple Integrals	413
13.2	Multiple Integrals with Constant Limits	415
13.2.1	Decomposition of a Multiple Integral into a Product of Integrals	417
13.3	Multiple Integrals with Variable Limits	418
13.4	Coordinate Systems	423
13.4.1	Polar Coordinates	423
13.4.2	Cylindrical Coordinates	426
13.4.3	Spherical Coordinates	428
13.5	Application: Moments of Inertia of a Solid	432
	Appendix: Applications of Double Integrals	436
	Exercises	436
14	Transformation of Coordinates; Matrices	439
14.1	Introduction	439
14.2	Parallel Shift of Coordinates: Translation	442
14.3	Rotation	445
14.3.1	Rotation in a Plane	445
14.3.2	Successive Rotations	448
14.3.3	Rotations in Three-Dimensional Space	449
14.4	Matrix Algebra	451
14.4.1	Addition and Subtraction of Matrices	453
14.4.2	Multiplication of a Matrix by a Scalar	454
14.4.3	Product of a Matrix and a Vector	454
14.4.4	Multiplication of Two Matrices	455
14.5	Rotations Expressed in Matrix Form	457
14.5.1	Rotation in Two-Dimensional Space	457
14.5.2	Special Rotation in Three-Dimensional Space	459
14.6	Special Matrices	460
14.7	Inverse Matrix	464
	Exercises	465

15	Sets of Linear Equations; Determinants	469
15.1	Introduction	469
15.2	Sets of Linear Equations	469
15.2.1	Gaussian Elimination: Successive Elimination of Variables	469
15.2.2	Gauss–Jordan Elimination	471
15.2.3	Matrix Notation of Sets of Equations and Determination of the Inverse Matrix	472
15.2.4	Existence of Solutions	475
15.3	Determinants	478
15.3.1	Preliminary Remarks on Determinants	478
15.3.2	Definition and Properties of An n-Row Determinant	479
15.3.3	Rank of a Determinant and Rank of a Matrix	486
15.3.4	Applications of Determinants	486
	Exercises	491
16	Eigenvalues and Eigenvectors of Real Matrices	493
16.1	Two Case Studies: Eigenvalues of 2×2 Matrices	493
16.2	General Method for Finding Eigenvalues	497
16.3	Worked Example: Eigenvalues of a 3×3 Matrix	498
16.4	Important Facts on Eigenvalues and Eigenvectors	501
	Exercises	501
17	Vector Analysis: Surface Integrals, Divergence, Curl and Potential	503
17.1	Flow of a Vector Field Through a Surface Element	503
17.2	Surface Integral	506
17.3	Special Cases of Surface Integrals	509
17.3.1	Flow of a Homogeneous Vector Field Through a Cuboid	509
17.3.2	Flow of a Spherically Symmetrical Field Through a Sphere	511
17.3.3	Application: The Electrical Field of a Point Charge	513
17.4	General Case of Computing Surface Integrals	514
17.5	Divergence of a Vector Field	518
17.6	Gauss's Theorem	522
17.7	Curl of a Vector Field	524
17.8	Stokes' Theorem	529
17.9	Potential of a Vector Field	530
17.10	Short Reference on Vector Derivatives	533
	Exercises	533
18	Fourier Series; Harmonic Analysis	537
18.1	Expansion of a Periodic Function into a Fourier Series	537

18.1.1	Evaluation of the Coefficients	538
18.1.2	Odd and Even Functions	542
18.2	Examples of Fourier Series	542
18.3	Expansion of Functions of Period $2L$	549
18.4	Fourier Spectrum	550
	Exercises	551
19	Fourier Integrals and Fourier Transforms	555
19.1	Transition from Fourier Series to Fourier Integral	555
19.2	Fourier Transforms	558
19.2.1	Fourier Cosine Transform	558
19.2.2	Fourier Sine Transform, General Fourier Transform	558
19.2.3	Complex Representation of the Fourier Transform	560
19.3	Shift Theorem	562
19.4	Discrete Fourier Transform, Sampling Theorems	562
19.5	Fourier Transform of the Gaussian Function	563
	Exercises	565
20	Probability Calculus	567
20.1	Introduction	567
20.2	Concept of Probability	568
20.2.1	Random Experiment, Outcome Space and Events	568
20.2.2	The Classical Definition of Probability	569
20.2.3	The Statistical Definition of Probability	570
20.2.4	General Properties of Probabilities	571
20.2.5	Probability of Statistically Independent Events. Compound Probability	574
20.3	Permutations and Combinations	576
20.3.1	Permutations	576
20.3.2	Combinations	577
	Exercises	579
21	Probability Distributions	581
21.1	Discrete and Continuous Probability Distributions	581
21.1.1	Discrete Probability Distributions	581
21.1.2	Continuous Probability Distributions	584
21.2	Mean Values of Discrete and Continuous Variables	588
21.3	The Normal Distribution as the Limiting Value of the Binomial Distribution	590
21.3.1	Properties of the Normal Distribution	593
21.3.2	Derivation of the Binomial Distribution	595
	Appendix	597

Exercises	599
22 Theory of Errors	601
22.1 Purpose of the Theory of Errors	601
22.2 Mean Value and Variance	602
22.2.1 Mean Value	602
22.2.2 Variance and Standard Deviation	603
22.2.3 Mean Value and Variance in a Random Sample and Parent Population	604
22.3 Mean Value and Variance of Continuous Distributions	606
22.4 Error in Mean Value	608
22.5 Normal Distribution: Distribution of Random Errors	610
22.6 Law of Error Propagation	611
22.7 Weighted Average	613
22.8 Curve Fitting: Method of Least Squares, Regression Line	614
22.9 Correlation and Correlation Coefficient	618
