

Table of Contents

Experimental systems

Architectural issues in the StormCast system

D. Johansen, G. Hartvigsen 1

Lessons learned from building and using the *Arjuna* distributed programming system

S. K. Shrivastava 17

Group communication

A high performance totally ordered multicast protocol

B. Whetten, T. Montgomery, S. Kaplan 33

New applications for group computing

R. van Renesse, K. P. Birman, T. von Eicken, K. Marzullo 58

Support for information sharing in CSCW based on causally and totally ordered group communication

M. Kolland 64

The design of the Transis system

D. Dolev, D. Malki 83

The Rampart toolkit for building high-integrity services

M. K. Reiter 99

Fault-tolerance issues in distributed systems

Deriving optimal checkpoint protocols for distributed shared memory architectures

L. Alvisi, K. Marzullo 111

Transaction model vs virtual synchrony model: bridging the gap

R. Guerraoui, A. Schiper 121

System structuring and structuring tools

Modelling Darwin in the π -calculus

J. Magee, S. Eisenbach, J. Kramer 133

Towards open service environments

K. Geihs, B. Bär, A. Puder 153

Correctness issues

Correctness proofs of distributed algorithms

W. Reisig 164

Deterministic fault injection of distributed systems

S. Dawson, F. Jahanian 178

Consistency issues and ordering algorithms

A non-blocking lightweight implementation of causal order message delivery

F. Mattern, S. Fünfroeken 197

Merits of a probabilistic approach to properties in process group systems

K. P. Birman 214

Sequential consistency in distributed systems

M. Mizuno, M. Raynal, J. Z. Zhou 224

Parallelism

Speedup limits for tightly-coupled parallel computations

R. Schwarz 242

Summary of the discussion sessions: FLP and real-time 260
