

Table of Contents

Chapter I

General Introduction	1
1. The problem of measurement in quantum mechanics	1
2. Historical account: interpretations and reconstructions of quantum mechanics	2
3. Decision tree	5

Chapter II

Basic Features of Quantum Mechanics	8
1. Hilbert space quantum mechanics	8
1.1. Basic framework	8
1.2. Tensor product and compound systems	14
1.3. Dynamics	16
2. Probabilistic structures of quantum mechanics	17
2.1. Gleason's theorem	17
2.2. Irreducibility of probabilities	19
2.3. Nonobjectivity of observables	20
2.4. Nonunique decomposability of mixed states	23
2.5. On the ignorance interpretation of mixed states	24

Chapter III

The Quantum Theory of Measurement	27
Survey – The notion of measurement	27
1. General description of measurement	30
1.1. The problem of isolated systems	30
1.2. Measurement	32
2. Premeasurements	34
2.1. Basic concepts of measurement theory	34
2.2. Unitary and normal unitary premeasurements	36
2.3. Discrete ordinary observables	38
2.4. Measurement and probability	42

3.	Probabilistic aspects of measurements	49
3.1.	General formulation of correlations	50
3.2.	Strong correlations between component states	51
3.3.	Strong correlations between observables	52
3.4.	Strong correlations between values	53
3.5.	First kind measurements	55
3.6.	Repeatable measurements	56
3.7.	Ideal measurements	58
3.8.	Résumé – A classification of premeasurements	61
4.	Information theoretical aspects of measurements	63
4.1.	The concept of entropy	64
4.2.	The concept of information	68
4.3.	Information and commutativity	73
5.	Objectification	75
5.1.	The problem	75
5.2.	Classical pointer observable	77
5.3.	Registration and reading	81
6.	Measurement dynamics	83
6.1.	The problem	83
6.2.	An inconsistency	85
7.	Limitations on measurability	87
7.1.	Repeatable measurements and continuous observables ...	88
7.2.	Complementary observables	90
7.3.	Measurability and conservation laws	91
8.	Preparation and determination of states	94
8.1.	State preparation	94
8.2.	State determination versus state preparation	96
	Résumé – Open questions	96

Chapter IV

Objectification and Interpretations of Quantum Mechanics.....	99
Survey – The problem of objectification	99
1. Historical prelude – Copenhagen interpretations	101
2. Ensemble and hidden variable interpretations.....	110
3. Interpretations without objectification	112
3.1. Many-worlds interpretation	113
3.2. Witnessing interpretation	117
3.3. A modal interpretation	118
4. Aiming at objectification within quantum mechanics.....	122
4.1. Ad hoc superselection rules	122
4.2. Modified dynamics	124
4.3. Environment approaches.....	126
4.4. Unsharp objectification	127
5. Approaching objectification beyond quantum mechanics	131
5.1. Continuous superselection rules	132
5.2. Algebraic attempts	133
5.3. Operational approaches.....	136

Chapter V

Concluding Discussion	138
References	144
List of frequently appearing notations	163
Index.....	164
