

Contents

Part I Invited Papers

**High-Reynolds-Number Asymptotics of Turbulent Boundary Layers:
From Fully Attached to Marginally Separated Flows** 3
Alfred Kluwick and Bernhard Scheichl

**A Deterministic Multiscale Approach for Simulating Dilute
Polymeric Fluids** 23
Davide J. Knezevic and Endre Süli

**Temperature Factor Effect on Separated Flow Features
in Supersonic Gas Flow** 39
V. Ya. Neyland, L.A. Sokolov, and V.V. Shvedchenko

**Recent Results on Local Projection Stabilization
for Convection-Diffusion and Flow Problems** 55
Lutz Tobiska

Part II Contributed Papers

**Numerical Simulation of the Towing Tank Problem Using
High Order Schemes** 79
L. Beneš, J. Fürst, and Ph. Fraunié

**Nonlinear Singular Kelvin Modes
in a Columnar Vortex** 95
Philippe Caillol and Sherwin A. Maslowe

**High Order Schemes for Reaction–Diffusion Singularly
Perturbed Systems** 107
C. Clavero, J.L. Gracia, and F.J. Lisbona

A Patched Mesh Method for Singularly Perturbed Reaction–Diffusion Equations	117
C. de Falco and E. O’Riordan	
Singularly Perturbed Reaction–Diffusion Problem with a Boundary Turning Point	129
C. de Falco and E. O’Riordan	
Examination of the Performance of Robust Numerical Methods for Singularly Perturbed Quasilinear Problems with Interior Layers	141
P.A. Farrell and E. O’Riordan	
Glycolysis as a Source of “External Osmoles”: The Vasa Recta Transient Model	153
M. Gonzalez, A.F. Hegarty, and S.R. Thomas	
A System of Singularly Perturbed Semilinear Equations	163
J.L. Gracia, F.J. Lisbona, M. Madaune-Tort, and E. O’Riordan	
On Finite Element Methods for 3D Time-Dependent Convection–Diffusion–Reaction Equations with Small Diffusion	173
Volker John and Ellen Schmeyers	
On the Application of Local Projection Methods to Convection–Diffusion–Reaction Problems	183
Petr Knobloch	
A Locally Adapting Parameter Design for the Divergence Stabilization of FEM Discretizations of the Navier–Stokes Equations	195
J. Löwe	
Distributed and Boundary Control of Singularly Perturbed Advection–Diffusion–Reaction Problems	205
G. Lube and B. Tews	
Antisymmetric Aspects of a Perturbed Channel Flow	217
J. Mauss, P. Cathalifaud, and J. Cousteix	
Turbulence Receptivity of Longitudinal Vortex-Dominated Flows	227
C. Moldoveanu, A. Giovannini, and H.C. Boisson	
A Thermally Induced Singularity in a Wake	237
Herbert Steinrück and Bernhard Kotesovec	
A Schwarz Technique for a System of Reaction Diffusion Equations with Differing Parameters	247
Meghan Stephens and Niall Madden	

On Numerical Simulation of an Aeroelastic Problem Nearby the Flutter Boundary	257
P. Sváček	
A Parameter–Uniform Finite Difference Method for a Singularly Perturbed Initial Value Problem: A Special Case	267
S. Valarmathi and J.J.H. Miller	
Boundary Shock Problems and Singularly Perturbed Riccati Equations ..	277
Relja Vulanović	
Electrochemical Pickling: Asymptotics and Numerics	287
M. Vynnycky and N. Ipek	
Energy Norm A-Posteriori Error Estimates for a Discontinuous Galerkin Scheme Applied to Elliptic Problems with an Interface	295
Paolo Zunino
