Abstract XXV

1 Introduction and Motivation for Mobile Data Transmission 1

1.1 Main Components for Vehicle Data Transmission 3

1.1.1 Vehicle Data Collection 3

1.1.2 Data Filters / Processing..... 7

1.1.3 Transmission from Vehicle to Server..... 8

1.2 Challenges of Vehicle Data Transfer..... 8

1.3 Goal of the Thesis 11

1.4 Structure of this Work 12

2 Foundation and State-of-the-Art 15

2.1 Data Generation within the Vehicle 15

2.1.1 Vehicle Data Busses and Vehicle Bus Networks 15

2.1.2 Representation of Vehicle Signals on Bus Systems..... 17

2.2 State-of-the-Art Vehicle Data Collection 19

2.2.1 Common Bus Communication Recording Formats..... 19

2.2.2 Formats to Describe Vehicle Signals 22

2.3 Data Transmission over Mobile Internet..... 23

2.3.1 Components of Mobile Internet Transmission..... 25

2.3.2 Hypertext Transfer Protocol (HTTP) as Basis of
Possible Data Transmission Protocols 26

2.3.3 HTTP-based Data Transmission Protocols 29

2.4 Data Processing Prior to Data Transfer 30

2.4.1 Data Reduction through Filters or Aggregation 30

2.4.2	Compression Theory	32
2.4.3	General Purpose Compression Algorithms	39
2.4.4	Compression Algorithms Optimized for Vehicle Bus Data	41
3	Model of the Transmission Pipeline	43
3.1	Model of Vehicle Communication Interface	44
3.2	Model of Data Pre-Processing.....	44
3.2.1	Modeling of Central Processing Unit (CPU) Tasks.....	45
3.2.2	Introduction of Data Blocks within a Pipeline	46
3.2.3	Estimation of Pre-Processing Throughput and Buffer Size	47
3.3	Model of Data Compression.....	48
3.3.1	Main Effects of Data Compression	48
3.3.2	Curve Fitting for Available Compression Algorithms	49
3.4	Model of Data Transfer	53
3.4.1	Observable Factors for Internet Data Transmission	53
3.4.2	Introduction of Net and Gross Network Speed	54
3.4.3	Effect of Transmission Control Protocol/Internet Protocol (TCP/IP) Protocol Overhead	55
3.4.4	Additional Overhead for High-Level Protocols.....	56
3.4.5	Effect of Connection Interruptions and Outages on Transmission Speed	57
3.4.6	Conclusion for Data Transfer Modeling.....	57
3.5	Model of Factors Subject to Optimization	58
3.5.1	Model of Intermediate Data Buffers.....	58
3.5.2	Model of System Latency.....	61
3.5.3	Conclusion of the Optimization Model	62
4	Introduction of the PProcessing, Optimization and Compression (PrOComp) Method	63
4.1	Data Flow Architecture of the Processing Pipeline	63
4.2	Specification for the Pre-Processing Techniques	64
4.2.1	1st: Bus Signal Transformation (BST).....	65
4.2.2	2nd: Differential Signal Transformation (DST)	67
4.2.3	3rd: Signal Alignment Transformation (SAT)	68

4.2.4	Pre-Processing Results Data Format: Compression Friendly Format (CFF)	70
4.2.5	Program Flow of the Pre-Processing Step	71
4.2.6	Algorithmic Complexity of the Pre-Processing Step	74
4.3	Specification for the Compression Step	74
4.3.1	Compression Algorithms Considered in this Work	74
4.3.2	Parameters of the Compression Step	75
4.4	Specification for Data Transfer	75
4.4.1	Choice of a Suitable Transmission Protocol	75
4.4.2	Suggested HTTP Protocol for Data Transmission	76
4.4.3	Additional Considerations and Requirements for Application	77
4.5	Observation of Key Pipeline Factors	79
4.5.1	Preliminary Measurements for Pipeline Calibration	79
4.5.2	Runtime Observation of Pipeline Factors	79
4.6	Parameter Optimization	80
4.6.1	Goals for Parameter Optimization	80
4.6.2	1st Strategy: Maximization of CR	80
4.6.3	2nd Strategy: Minimization of Preliminary Buffers	81
4.6.4	3rd Strategy: Minimization of Overall Latency	81
4.6.5	Runtime Adaption to Model Inaccuracies	82
4.6.6	Interpolation of Discrete Compression Algorithms	82
5	Measurement Results and Validation of the Method	87
5.1	Description of Vehicle Data Collection and Measurements	87
5.1.1	Vehicle Data Measurement Results	88
5.1.2	Conclusions about Vehicle Data Measurements	89
5.2	Performance Measurements of Processing Pipeline Steps	89
5.2.1	Pre-Processing Step Performance	90
5.2.2	Compression Step Performance	91
5.2.3	Curve Fitting on Compression Algorithms	94
5.3	Evaluation of Factors on CR	98
5.3.1	Effect of Variation of the Vehicle Data Bus	98
5.3.2	Effect of the Vehicle State on CR	100
5.3.3	Effect of the Process Parameter S_{block} on CR	102

5.4	Optimization Strategy Evaluation Based on the Measurements...	103
5.4.1	Evaluation of the Buffer Size Minimization Strategy	104
5.4.2	Evaluation of the Latency Minimization Strategy.....	105
5.5	Conclusion and Validation of the ProComp method	105
5.5.1	Improvements of ProComp over State-of-the-Art	106
5.5.2	Room for <i>CR</i> Improvements	108
6	Discussion and Outlook	111
6.1	Critical Analysis of the Method.....	111
6.1.1	Possibilities to Improve the Compression Efficiency	111
6.1.2	Necessary Measures for Transmission of Signal Data over Mobile Internet.....	112
6.2	Relevance of this Work and Outlook	112
	Bibliography	117
	Appendix	129
A.1	Comparison of Compression Schemes	129
A.2	Detailed Description of the Compression Friendly Format (CFF) Data Format	129
A.3	Transformation Techniques Description and Complexity Analysis.....	133
A.4	Overview of Data Base Can (DBC) Files Used in the Vehicle Measurements	136
A.5	Effect of S_{block} on the overall <i>CR</i>	137
A.6	Pre-Processing Techniques and Their Individual Effect on <i>CR</i> ...	138
