

Contents

Symbols	XIII
1 General Basics	1
1.1 Micrometeorology	1
1.2 Atmospheric Scales.....	4
1.3 Atmospheric Boundary Layer.....	6
1.4 Energy Balance at the Earth's Surface.....	8
1.4.1 Net Radiation at the Earth's Surface.....	11
1.4.2 Ground Heat Flux and Ground Heat Storage.....	15
1.4.3 Turbulent Fluxes.....	18
1.5 Water Balance Equation	23
2 Basic Equations of Atmospheric Turbulence	25
2.1 Equation of Motion.....	25
2.1.1 Navier-Stokes Equation of Mean Motion	25
2.1.2 Turbulent Equation of Motion	26
2.1.3 Closure Techniques	31
2.2 Equation of the Turbulent Kinetic Energy	35
2.3 Flux-Gradient Similarity.....	37
2.3.1 Profile Equations for Neutral Stratification	37
2.3.2 Monin-Obukhov's Similarity Theory	42
2.3.3 Bowen-Ratio Similarity	49
2.4 Flux-Variance Similarity	50
2.5 Turbulence Spectrum	52
3 Specifics of the Near-Surface Turbulence	61
3.1 Properties of the Underlying Surface.....	61
3.1.1 Roughness.....	61
3.1.2 Zero-Plane Displacement.....	67
3.1.3 Profiles in Plant Canopies.....	68
3.2 Internal Boundary Layers	71
3.2.1 Definition.....	71
3.2.2 Experimental Findings.....	74

3.2.3 Thermal Internal Boundary Layer	76
3.2.4 Blending-Height Concept	77
3.2.5 Practical Relevance of Internal Boundary Layers	78
3.3 Obstacles	79
3.4 Footprint	82
3.4.1 Definition	82
3.4.2 Footprint Models	83
3.4.3 Application of Footprint Models	84
3.5 High Vegetation	87
3.5.1 Behavior of Meteorological Parameters in a Forest	87
3.5.2 Counter Gradient Fluxes	89
3.5.3 Roughness Sublayer	91
3.5.4 Turbulent Structures in and above a Forest	92
3.5.5 Mixing Layer Analogy	95
3.5.6 Coupling Between the Atmosphere and Plant Canopies	97
3.6 Conditions Under Stable Stratification	99
3.7 Energy Balance Closure	101
 4 Experimental Methods for Estimating the Fluxes of Energy and Matter	 105
4.1 Eddy-Covariance Method	105
4.1.1 Basics in Measuring Technique	106
4.1.2 Correction Methods	108
4.1.3 Quality Assurance	118
4.1.4 Gap Filling	120
4.1.5 Overall Evaluation	122
4.2 Profile Method	123
4.2.1 Bulk Approaches	123
4.2.2 Bowen-Ratio Method	125
4.2.3 Modified Bowen-Ratio Method	128
4.2.4 Further Parameterization Methods	130
4.2.5 Profile Calculation	132
4.2.6 Quality Assurance	134
4.2.7 Power Approaches	136
4.3 Flux-Variance Methods	138
4.4 Accumulation Methods	140
4.4.1 Eddy-Accumulations-Method (EA)	140
4.4.2 Relaxed Eddy-Accumulation Method (REA)	140
4.4.3 Disjunct Eddy-Covariance Method (DEC)	144
4.4.4 Surface Renewal Method	145
4.5 Fluxes of Chemical Substances	147

5	Modeling of the Energy and Matter Exchange	153
5.1	Energy Balance Methods	153
5.1.1	Determination of the Potential Evaporation	154
5.1.2	Determination of the Actual Evaporation	158
5.1.3	Determination from Routine Weather Observations.....	161
5.2	Hydrodynamical Multilayer Models	162
5.3	Resistance Approach.....	164
5.4	Modeling of Water Surfaces	169
5.5	Modeling in Large-Scale Models.....	170
5.6	Large-Eddy Simulation	172
5.7	Area Averaging.....	174
5.7.1	Simple Area Averaging Methods	175
5.7.2	Complex Area-Averaging Methods.....	176
5.7.3	Model Coupling.....	178
6	Measuring Technique.....	179
6.1	Data Collection	179
6.1.1	Principles of Digital Data Collection.....	179
6.1.2	Signal Sampling.....	181
6.1.3	Transfer Function	183
6.1.4	Inertia of a Measuring System	185
6.2	Measurement of Meteorological Elements	188
6.2.1	Radiation Measurements	189
6.2.2	Wind Measurements	193
6.2.3	Temperature and Humidity Measurements.....	200
6.2.4	Precipitation Measurements.....	208
6.2.5	Remote Sensing Methods	209
6.2.6	Other Measuring Techniques.....	212
6.3	Quality Assurance.....	217
6.3.1	Quality Control.....	218
6.3.2	Intercomparison of Measuring Devices.....	220
7	Microclimatology	223
7.1	Climatological Scales	223
7.2	Small-Scale Changes of Climate Elements.....	224
7.3	Microclimate Relevant Circulations	226
7.3.1	Land-Sea Wind Circulation	226
7.3.2	Mountain-Valley Circulation.....	226
7.4	Local Cold-Air Flows	228
7.5	Microclimatological Measurements.....	231
8	Applied Meteorology	233
8.1	Distribution of Air Pollution.....	233
8.2	Meteorological Conditions of Wind Energy Use.....	236

8.3 Sound Propagation in the Atmosphere	237
8.4 Human Biometeorology.....	239
8.5 Perspectives of the Applied Meteorology.....	242
Appendix	243
A1 Further Monographs	243
A2 Use of SI-Units	244
A3 Constants and Important Parameters.....	245
A4 Further Equations.....	247
Calculation of Astronomical Quantities	247
Universal Functions.....	249
Integral Turbulence Characteristics in the Surface Layer.....	253
A5 Overall View of Experiments	255
A6 Meteorological Measuring Stations	257
A7 Micrometeorological Standards used in Germany.....	258
A8 Available Eddy-Covariance Software.....	260
A9 Glossary	261
References	265
Register of Sources	295
Index.....	301
