

TABLE OF CONTENTS

PREFACE.....	v
---------------------	----------

LIST OF SYMBOLS AND OPERATORS	xiii
--	-------------

CHAPTER 1 THE IMAGING RADAR SYSTEM.....	1
--	----------

1.1 Why Microwaves?	1
1.2 Imaging with Microwaves.....	1
1.3 Components of an Imaging Radar System	3
1.4 Assumed Knowledge	5
1.4.1 Complex Numbers	6
1.4.2 Vectors and Matrices	6
1.4.3 Differential Calculus	6
1.5 Referencing and Footnotes	6
1.6 A Critical Bibliography	6
1.7 How this Book is Organised	9

CHAPTER 2 THE RADIATION FRAMEWORK.....	11
---	-----------

2.1 Energy Sources in Remote Sensing	11
2.2 Wavelength Ranges used in Remote Sensing.....	14
2.3 Total Available Energy.....	15
2.4 Energy Available for Microwave Imaging.....	17
2.5 Passive Microwave Remote Sensing.....	19
2.6 The Atmosphere at Microwave Frequencies.....	19
2.7 The Benefits of Radar Remote Sensing	21
2.8 Looking at the Underlying Electromagnetic Fields.....	22
2.9 The Concept of Near and Far Fields	26
2.10 Polarisation.....	28
2.11 The Jones Vector.....	33
2.12 Circular Polarisation as a Basis Vector System.....	36
2.13 The Stokes Parameters, the Stokes Vector and the Modified Stokes Vector.....	38
2.14 Unpolarised and Partially Polarised Radiation	40
2.15 The Poincaré Sphere	42
2.16 Transmitting and Receiving Polarised Radiation	44
2.17 Interference	48
2.18 The Doppler Effect.....	49

CHAPTER 3 THE TECHNOLOGY OF RADAR IMAGING.....	53
---	-----------

PART A: THE SYSTEM.....	53
--------------------------------	-----------

3.1 Radar as a Remote Sensing Technology.....	53
3.2 Range Resolution.....	55
3.3 Pulse Compression Radar.....	58
3.4 Resolution in the Along Track Direction.....	61

3.5 Synthetic Aperture Radar (SAR).....	61
3.6 The Mathematical Basis for SAR.....	62
3.7 Swath Width and Bounds on Pulse Repetition Frequency.....	66
3.8 The Radar Resolution Cell.....	68
3.9 ScanSAR.....	68
3.10 Squint and the Spotlight Operating Mode.....	71
PART B: THE TARGET.....	75
3.11 The Radar Equation.....	75
3.12 Theoretical Expression for Radar Cross Section.....	77
3.13 The Radar Cross Section in dB.....	77
3.14 Distributed Targets.....	78
3.15 The Scattering Coefficient in dB.....	79
3.16 Polarisation Dependence of the Scattering Coefficient.....	80
3.17 The Scattering Matrix.....	81
3.18 Target Vectors.....	85
3.19 The Covariance and Coherency Matrices.....	86
3.20 Measuring the Scattering Matrix.....	89
3.21 Relating the Scattering Matrix to the Stokes Vector.....	90
3.22 Polarisation Synthesis.....	92
3.23 Compact Polarimetry.....	103
3.24 Faraday Rotation.....	106
CHAPTER 4 CORRECTING AND CALIBRATING RADAR IMAGERY.....	109
4.1 Sources of Geometric Distortion.....	109
4.1.1 Near Range Compressional Distortion.....	109
4.1.2 Layover, Relief Displacement, Foreshortening and Shadowing.....	111
4.1.3 Slant Range Imagery.....	113
4.2 Geometric Correction of Radar Imagery.....	115
4.2.1 Regions of Low Relief.....	115
4.2.2 Passive Radar Calibrators.....	116
4.2.3 Active Radar Calibrators (ARCs).....	117
4.2.4 Polarimetric Active Radar Calibrators (PARCs).....	118
4.2.5 Regions of High Relief.....	118
4.3 Radiometric Correction of Radar Imagery.....	120
4.3.1 Speckle.....	120
4.3.2 Radar Image Products.....	127
4.3.3 Speckle Filtering.....	128
4.3.4 Antenna Induced Radiometric Distortion.....	133
CHAPTER 5 SCATTERING FROM EARTH SURFACE FEATURES.....	135
5.1 Introduction.....	135
5.2 Common Scattering Mechanisms.....	135
5.3 Surface Scattering.....	136
5.3.1 Smooth Surfaces.....	136
5.3.2 Rough Surfaces.....	139
5.3.3 Penetration into Surface Materials.....	148

5.4	Volume Scattering.....	153
5.4.1	Modelling Volume Scattering	153
5.4.2	Depolarisation in Volume Scattering	158
5.4.3	Extinction in Volume Scattering	159
5.5	Scattering from Hard Targets.....	160
5.5.1	Facet Scattering	161
5.5.2	Dihedral Corner Reflector Behaviour.....	162
5.5.3	Metallic and Resonant Elements	167
5.5.4	Bragg Scattering	170
5.5.5	The Cardinal Effect	171
5.6	Composite Scatterers.....	172
5.7	Sea Surface Scattering	172
5.8	Internal (Ocean) Waves	178
5.9	Sea Ice Scattering.....	178

CHAPTER 6 INTERFEROMETRIC AND TOMOGRAPHIC SAR.....181

6.1	Introduction.....	181
6.2	The Importance of Phase.....	181
6.3	A Radar Interferometer – InSAR.....	183
6.4	Creating the Interferometric Image.....	185
6.5	Correcting for Flat Earth Phase Variations	186
6.6	The Problem with Phase Angle.....	187
6.7	Phase Unwrapping	189
6.8	An Inclined Baseline.....	190
6.9	Standard and Ping Pong Modes of Operation.....	191
6.10	Types of SAR Interferometry	192
6.11	The Concept of Critical Baseline	194
6.12	Decorrelation.....	196
6.13	Detecting Topographic Change: Along Track Interferometry	198
6.14	Polarimetric Interferometric SAR (PolInSAR).....	202
6.14.1	Fundamental Concepts	202
6.14.2	The T_6 Coherency Matrix	206
6.14.3	Maximising Coherence.....	207
6.14.4	The Plot of Complex Coherence	208
6.15	Tomographic SAR	209
6.15.1	The Aperture Synthesis Approach.....	209
6.15.2	The Fourier Transformation Approach to Vertical Resolution.....	215
6.15.3	Unevenly Spaced Flight Lines.....	216
6.15.4	Polarisation in Tomography	217
6.15.5	Polarisation Coherence Tomography	217
6.16	Range Spectral Filtering and a Re-examination of the Critical Baseline.....	229

CHAPTER 7 BISTATIC SAR.....233

7.1	Introduction.....	233
7.2	Generalised Radar Networks	234

7.3 Analysis of Bistatic Radar.....	236
7.3.1 The Bistatic Radar Range Equation and the Bistatic Radar Cross Section	236
7.3.2 Bistatic Ground Range Resolution	237
7.3.3 Bistatic Azimuth Resolution.....	242
7.4 The General Bistatic Configuration	249
7.5 Other Bistatic Configurations	256
7.6 The Need for Transmitter-Receiver Synchronisation	257
7.7 Using Transmitters of Opportunity	258
7.8 Geometric Distortion and Shadowing with Bistatic Radar	259
7.9 Remote Sensing Benefits of Bistatic Radar	260
7.10 Bistatic Scattering	261

CHAPTER 8 RADAR IMAGE INTERPRETATION.....265

8.1 Introduction	265
8.2 Analytical Complexity.....	265
8.3 Visual Interpretation Through an Understanding of Scattering Behaviours	266
8.3.1 The Role of Incidence Angle.....	267
8.3.2 The Role of Wavelength.....	268
8.3.3 The Role of Polarisation.....	269
8.4 Quantitative Analysis of Radar Image Data for Thematic Mapping	271
8.4.1 Overview of Methods.....	271
8.4.2 Features Available for Radar Quantitative Analysis	273
8.4.3 Application of Standard Classification Techniques	274
8.4.4 Classification Based on Radar Image Statistics	275
8.4.4.1 A Maximum Likelihood Approach	275
8.4.4.2 Handling Multi-look Data	278
8.4.4.3 Relating the Scattering and Covariance Matrices, and the Stokes Scattering Operator	279
8.4.4.4 Adding Other Dimensionality	280
8.5 Interpretation Based on Structural Models	281
8.5.1 Interpretation Using Polarisation Phase Difference	281
8.5.2 Interpretation Through Structural Decomposition	283
8.5.2.1 Decomposing the Scattering Matrix.....	284
8.5.2.2 Decomposing the Covariance Matrix: the Freeman-Durden Approach	284
8.5.2.3 Decomposing the Coherency Matrix: the Cloude-Pottier Approach	288
8.5.2.4 Coherency Shape Parameters as Features for PolInSAR Classification.....	300
8.6 Interferometric Coherence as a Discriminator	302
8.7 Some Comparative Classification Results	303
8.8 Finding Pixel Vertical Detail Using Interferometric Coherence	306

CHAPTER 9 PASSIVE MICROWAVE IMAGING309

9.1 Introduction	309
9.2 Radiometric Brightness Temperature.....	310

9.3 Relating Microwave Emission to Surface Characteristics	311
9.4 Emission from Rough Surfaces.....	314
9.5 Dependence on Surface Dielectric Constant.....	315
9.6 Sea Surface Emission.....	316
9.7 Brightness Temperature of Volume Media.....	318
9.8 Layered Media: Vegetation over Soil	318
9.9 Passive Microwave Remote Sensing of the Atmosphere.....	320
APPENDIX A COMPLEX NUMBERS.....	321
APPENDIX B MATRICES.....	327
B.1 Matrices and Vectors, Matrix Multiplication	327
B.2 Indexing and Describing the Elements of a Matrix	328
B.3 The Kronecker Product.....	329
B.4 The Trace of a Matrix	329
B.5 The Identity Matrix.....	329
B.6 The Transpose of a Matrix or a Vector.....	330
B.7 The Determinant	331
B.8 The Matrix Inverse	332
B.9 Special Matrices	332
B.10 The Eigenvalues and Eigenvectors of a Matrix.....	333
B.11 Diagonalisation of a Matrix	334
B.12 The Rank of a Matrix.....	335
APPENDIX C SI SYMBOLS AND METRIC PREFIXES.....	337
APPENDIX D IMAGE FORMATION WITH SYNTHETIC	
APERTURE RADAR.....	339
D.1 Summary of the Process	339
D.2 Range Compression.....	341
D.3 Compression in Azimuth.....	342
D.4 Look Summing for Speckle Reduction	342
D.5 Range Curvature.....	345
D.6 Side Lobe Suppression	347
APPENDIX E BACKSCATTER AND FORWARD SCATTER	
ALIGNMENT COORDINATE SYSTEMS	351
INDEX	355
