Keynote Paper Session

A brief history of rotor dynamics <i>A. D. Dimarogonas</i>	1
---	---

Session 1 Balancing

Theoretical and practical aspects in the field balancing of large turbogenerator rotors <i>C. Frigeri, M. Tonsi and G. A. Zanetta</i>	11
Active balancing of a high speed rotor in magnetic bearings <i>C. R. Knospe, R. R. Humphris, E. H. Maslen and P. E. Allaire</i>	19

Session 2 Torsion

A new generation of torsional stress analysers for turbine-generators <i>H. L. Berger and S. T. Kulig</i>	27
Coupled axial-torsional vibration in turbine generator rotors <i>R. A. Driver and T. S. Wilkinson</i>	35
Nonstationary torsional vibrations during clutch operation <i>S. Yanabe, A. Okada and N. Yamagishi</i>	43

Session 3 Cracked Structures

A finite element model for transverse cracks in rotors including some fracture mechanics aspects <i>D. P. W. Horrigan, J. F. Williams and Z. A. Parszewski</i>	51
The effects of a transverse crack on the dynamics of a circular shaft <i>P. S. Leung</i>	59
Vibrations of cracked rotating blades <i>J. Wauer</i>	68

Session 4 Condition Monitoring I

Development of computerised on-line condition monitoring of rotating machinery – a custom based approach <i>K. Ramakrishna, A. Rajamani and S. Narayanan</i>	76
An expert system of crack monitoring and diagnosing for rotating machines <i>M. Zhao and Z. H. Luo</i>	84
Alignment identification of multi-bearing rotor systems <i>J. M. Krodkiewski, J. Ding and Z. A. Parszewski</i>	92
Smart rotors <i>A. D. Dimarogonas and A. Kollias</i>	100
Fuzzy input-neural net adoptive expert systems for rotor diagnosis and prognosis <i>A. D. Dimarogonas</i>	107

Session 5 Stability

Plain bearing stabilisation using swirl injection <i>R. D. Brown</i>	115
Stability analysis for a novel design of low impedance hydrodynamic bearing <i>L. K. Lim, M. J. Goodwin, P. J. Ogrodnik and M. P. Roach</i>	124
On the performance and stability of magnetic bearings <i>D. K. Anand, J. A. Kirk, R. Zmood and E. Rodriguez</i>	132

Session 6 Seals

Identification of friction factors for modelling the exciting forces caused by flow in labyrinth seals <i>G. Thieleke and H. Stetter</i>	140
Physical modelling and data analysis of the dynamic response of a flexibly mounted rotor mechanical seal <i>A. S. Lee and I. Green</i>	150
The relevance of the dynamic behaviour of the supporting structure in calculating critical speeds of multistage centrifugal pumps with interstage seals <i>N. Bachschmid, K. L. Cavalca and F. Cheli</i>	158

Session 7 Analytical Methods I

The FEM development of a general, hollow conical shaft element for use in transfer matrix analysis of rotor-bearing systems: part I – formulation of the model <i>M. S. Darlow and T. J. Bievenue</i>	166
The FEM development of a general, hollow conical shaft element for use in transfer matrix analysis of rotor-bearing systems: part II – analysis results and experimental correlation <i>M. S. Darlow and T. J. Bievenue</i>	174
Response of a discontinuously nonlinear rotor system <i>D. Gonsalves, R. D. Neilson and A. D. S. Barr</i>	182

Session 8 Condition Monitoring II

A PC-based evaluation and monitoring system for rotating machinery <i>M. Typrin, E. C. Pawtowski and R. G. Kirk</i>	190
Some effects of the emerging science of design on the design of turbomachinery using a computer-based design model in conjunction with a knowledge-based expert system <i>D. Muster</i>	198
The organisation and use of knowledge-based expert systems in the computer-based design of turbomachinery <i>D. Muster</i>	208

Session 9 Geared Systems

Optimising parameters in gear hob manufacturing to reduce gear transmission vibration and wear <i>Z. X. Zhao, R. W. Baines and Z. H. Wang</i>	217
Finite element contact analysis of the cone roller enveloping worm gearing and stress computation <i>L. Hui and Z. Guanghui</i>	225
Vibrational behaviour of rotors with gear couplings in case of insufficient coupling lubrication <i>N. Bachschmid, A. Curami and F. Petrone</i>	232

Session 10 Analytical Methods II

On discrete-continuous modelling of the rotating systems for a non-linear torsional vibration analysis

R. Bogacz, H. Irretier and T. Szolc 240

The rotary motion of a three degree of freedom manipulator linkage

K. L. Fan, M. J. Goodwin, M. D. Butler, D. D. L. Risk and J. E. T. Penny 248

Physical interpretation and some properties of complex eigenvectors in rotordynamics by a time domain approach

H. R. T. de Azevedo and H. I. Weber 256

The evaluation of the safety of the shaft system of the large turbine generator set

H. Y. Luo 264

Session 11 Bladed Systems

Vibration reduction of blading using interconnecting elements

G. M. Chapman, E. Swain, X Wang and M. Yang 270

Vibration characteristics of an axial blading with different types of coupling links

J. F. Mayer 278

Session 12 Case Studies

The use of finite element method to solve vibration problems on vertical pumps

M. Scali and G. Marengo 287

The influence of pulsating mechanical loads on acoustic noise generated by AC induction motors

R. P. Lisner and R. J. Alfredson 294

Dynamics of electric submersible pumps

R. D. Neilson 302

High vibration on a 90MW gas turbine-generator due to a supporting structure resonance

G. L. Lapini, M. Zippo, A. Vallini, G. Diana and A. Collina 310

Study on torsional shaft vibration response of turbine-generator unit

H. Xiuzhu, Z. Xueyan and S. Daixia 319

Session 13 Vibration Control

Wide band active vibration controller for an out-of-balance rotor

A. V. Metcalfe and J. S. Burdess 327

Vibration control of a flexible rotor suspended by active electromagnetic bearings

Y. Suzuki, S. Michimura and A. Tamura 335

Reduction of periodic rotating vibration using the repetitive control in the rotating servo system

Z. W. Zhong 343

Session 14 Bearings I

Steady-state analysis of a novel variable impedance oil film bearing

Y. Fang, M. J. Goodwin, P. J. Ogrodnik and M. P. Roach 351

Influence of elasticity and geometrical profile on dynamic transmissibility of connecting-rod bearing

B. Fantino and B. Bou-Säïd 359

Vibration control in rotating machinery by the use of accumulators or aerated lubricants

M. P. Roach and M. J. Goodwin 367

Session 15 Fluid Effects

Modelling of recirculation in axial flow pumps <i>R. Noguera, F. Massouh, R. Rey and S. Kouidri</i>	376
Finite element integration of the bulk-flow equations <i>B. Pizzigoni and E. Tanzi</i>	382
A contribution to the dynamic simulation of nonlinear rotating machines with fluid dynamical coupling elements <i>D. Weber, R. Cardinali and R. Nordmann</i>	389

Session 16 Bearings II

A consideration of damping in rotors supported by tilting-pad bearings <i>M. F. White</i>	398
The response of a spherical journal bearing to rotor unbalance <i>I. A. Craighead and P. S. Leung</i>	406
Influence of ball bearing stiffness on squeeze film behaviour, including fluid flow turbulence and inertia effects <i>B. Bou-Said and D. Nelias</i>	414
