

Contents

Introduction.....1

Mathematical Background

1. Logic and Model Theory 15
 1.1 Basic Mathematical Notions.....15
 1.2 Derivation Systems.....18
 1.3 Basic Notions of Many-Sorted First-Order Language.....21
 1.4 Relations in Many-Sorted Structures 28
 1.5 Ultraproducts.....29
 1.6 Arithmetic.....30
2. Inductive Definability 37

Part I

Computability

3. Introduction to Part I.....49
4. Main Properties of Program Schemas 53
 4.1 Basic Definitions of Program Schemas 54
 4.2 Flowchart Schemas.....58
 4.3 Main Properties of σ -type Programs.....63
 4.4 Canonical Form of Programs 70
5. Extension of Program Schemas.....77
 5.1 Main Properties of Extensions.....78
 5.2 Set Extension 84
 5.3 Halting Problem for Extensions 88
6. Program Schemas with Stacks.....91
 6.1 On the Number of Stacks 91
 6.2 Deterministic Programming Languages 99
7. Computability 103
 7.1 Computability on First-Order Structures 103
 7.2 Church's Thesis.....112
8. On Inductive Definability of 1- and 2-Computable Relations 119
 8.1 Logical Characterization of 1-Computable Relations 120
 8.2 On the Role of Natural Numbers 127

Part II

Extended Dynamic Logics

9. Introduction to Part II	135
10. Description of Program Properties	139
11. Den-based Descriptive Languages	143
12. The Problem of Completeness	155
12.1 Incompleteness Results	156
12.2 On Restricted Partial Correctness Theories	161
12.3 Den-Completeness	165
13. Dynamic Logic Generated by Extension	171
14. Continuous Denotational Semantics	179
14.1 Transitive Extension	180
14.2 Non-standard Dynamic Logic	193
14.3 Axiomatic Calculus for the Extended Dynamic Logic	202
14.4 On Program Equivalence	205
14.5 Constructing Transitive Extensions	206
15. Definable Denotational Semantics	211

Part III

Temporal Characterization of Programs

16. Introduction to Part III	229
17. Temporal Logic	233
18. Temporal Logical Description of Program Properties	239
19. Is Temporal Logic Expressible in Dynamic Logic?	243
20. Is Dynamic Logic Expressible in Temporal Logic?	247
21. The Case of Enumerable Models	263
22. Temporal Axiomatization of Program Verification Methods	267

Part IV

Programming Logic with Explicit Time

23. Introduction to Part IV	285
24. Time Logic	289
24.1 Time Extension	289
24.2 On Regular Time Theories	292
25. Definability in Regular Time Theories	297
25.1 Finitary Fixed-Point Theory	298
25.2 Inductive Extensions Generated by Regular Theories	300
25.3 A Non-Finitary Fixed-Point Theory	305
26. Expressive Power of Time	309
26.1 Embedding Temporal Logic	309
26.2 Embedding Transitive and Inductive Extensions	313
26.3 Description of Program Extensions	320

Epilogue	325
References	335
Notations	341
Subject Index	347
