

CONTENTS

A. Classical Nonlinear Dynamics and Chaos

S.E. Newhouse: Entropy and Volume as Measures of Orbit Complexity	2
O.E. Rossler: A Chaotic 1-D Gas: Some Implications	9
B. Rossetto: Singular Approximation of Chaotic Slow-Fast Dynamical Systems ..	12
A.M. Albano, L. Smilowitz, P.E. Rapp, G.C. de Guzman, and T.R. Bashore: Dimension Calculations in a Minimal Embedding Space: Low-Dimensional Attractors for Human Electroencephalograms	15
J.D. Barrow: Chaotic Space-Times	18
J. Koiller, J.M. Balthazar, and T. Yokoyama: On Relaxation Chaos: An Example from Celestial Mechanics	22
R.L. Warnock and R.D. Ruth: Computation of Invariant Tori and Acceleration of the K.A.M. Algorithm	25
C. Grebogi, E. Ott, and J.A. Yorke: Fractal Basin Boundaries	28
F.J. Romeiras: Quasi-Periodic Schrödinger Equations and Strange Nonchaotic Attractors of Pendula and Josephson Junctions	33
H. Irie and T. Hatori: Long-Time Correlation in Classical Hamiltonian Systems with Two Degrees of Freedom	36
T. Kurz and G. Mayer-Kress: Dimension Density - an Intensive Measure of Chaos in Spatially Extended Turbulent Systems	39
T.L. Gill and W.W. Zachary: Properties of the Maximal Attractor for the Landau-Lifschitz Equations	42
C. Adler, P.H. Carter, and R. Cawley: A Comparison of the Fractal Dimensions of Cloud Radiance Graphs for Two Infrared Color Bands	45
M.A.M. de Aguiar, C.P. Malta, E.J.V. de Passos, M. Baranger, and K.T.R. Davies: The Genealogy of Periodic Trajectories	51
L. Michelotti: Perturbation Theory and the Single Sextupole	54
K. Hizanidis and C. Menyuk: Stochastic Instability in a System with Two Degrees of Freedom	57
J.M. Finn and G.-Z. Sun: Nonlinear Stability in Anisotropic Magneto- hydrodynamics	60
M. Kummer: On Resonant Hamiltonians with n Frequencies	63
Y. Huang: Singular Perturbation and Almost Periodic Solutions of Nonlinear Dynamic Systems	66
M.F. Shlesinger, B.J. West, and J. Klafter: Diffusion in a Turbulent Phase Space	69

J.A. White: Increase in Phase Space Accessible to Particles When Their Attractive Interactions Are Short-Ranged	72
R. McWilliams and D. Sheehan: Experimental Measurements of Phase Space	75
J. Jellinek and R.S. Berry: Simulation of Arbitrary Ensembles by Extended Dynamics: A Unified Scheme	78
H. Nakazawa: Self-Organized Structures in the Forced Burgers' Turbulence	82
F.T. Hioe and Z. Deng: Critical Points, Critical Exponents, and Stability-Instability Transitions in Hamiltonian Systems	87
R. Cawley and A.L. Licht: Maximum Likelihood Method for Evaluating Correlation Dimension	90

B. Quantum Chaos

P.M. Koch, K.A.H. van Leeuwen, O. Rath, D. Richards, and R.V. Jensen: Microwave Ionization of Highly Excited Hydrogen Atoms: Experiment and Theory	106
J.E. Bayfield and L.A. Pinnaduwage: Highly Excited Hydrogen in Microwaves: Measurements on the Externally Bound Electron at the Classical Threshold for Chaos	114
Y. Alhassid: Transition Strength Fluctuations and the Onset of Chaos	117
J.H. Hannay: Application of Phase Space to Quantum Statics and Classical Adiabatics	121
S.-J. Chang and K.-J. Shi: Evolution and Exact Eigenstates of a Resonant Quantum System	127
K.-J. Shi and S.-J. Chang: Quantum KAM Theorem	130
J.B. Delos, S.K. Knudson, R.L. Waterland, and M.L. Du: Atoms in Strong Fields: Candidates for Laboratory Studies of Quantum Chaos	133
J.R. Cary, P. Rusu, and R.T. Skodje: Quantum Analysis of States near a Separatrix	137
F.R. Johnston and P. Pechukas: Adiabatic Invariants, Resonances, and Multi-dimensional Semiclassical Quantization	140
I. Dana and W.P. Reinhardt: Intrinsic Nonadiabaticities on the Farey Tree ..	146
R.V. Jensen: Chaotic Ionization of Highly Excited Hydrogen Atoms	151
G. Radons, T. Geisel, and J. Rubner: The Role of KAM-Tori for the Dynamics of Nonlinear Quantum Systems	156
J. Ford: Quantum Chaos, Is There Any?	159

C. Wigner Distributions

E.P. Wigner: The General Properties of the Distribution Function and Remarks on Its Weakness	162
--	-----

R.F. O'Connell: Wigner Distribution Function Approach to the Calculation of Quantum Effects in Condensed Matter Physics	171
H. Szu: Signal Processing Using Bilinear and Nonlinear Time-Frequency-Joint-Representations	179
W. Schleich and J.A. Wheeler: Interference in Phase Space	200
F.J. Narcowich: A Quantum Mechanical Moment Problem	205
J. Bertrand and P. Bertrand: Tomographic Procedure for Constructing Phase Space Representations	208
R. Gilmore: Wigner Distribution on $SU(2)$	211
E.A. Remler: Phase Space Calculations of Composite Particle Production	214
N.L. Balazs: The Geometry of Wigner's Function	222
F. Zachariasen: Distribution Functions in Elementary Particle Physics	228
M. Durand, P. Schuck, and E. Suraud: Single and Multiparticle Wigner Distributions in Inhomogeneous Fermi Systems	232
A. Royer: Squeezed States and Their Wigner Functions	235
E. Calzetta and B.L. Hu: Wigner Function and Quantum Liouville Equation in Curved Spacetime	238
J.P. Dahl: Application of the Wigner Function in the Theory of Atomic and Molecular Electronic Structure	241
H.-W. Lee: Wigner Phase-Space Approach in the Molecular Collision Theory - Search for Wigner Trajectories	244
W. Schempp: Optical Eigenmodes and the Wigner Distribution	247
P. Bertrand and J. Bertrand: Time Frequency Representation of Broad Band Signals	250
M.O. Scull and L. Cohen: Quasi-Probability Distributions for Arbitrary Operators	253
L. Cohen: Operator Relations, the Eigenvalue Problem, and Representability for Quantum Phase-Space Distributions	261
J.M. Gracia-Bondía and J.C. Varilly: Sums over Paths Adapted to Quantum Theory in Phase Space	264
P. Kasperkovitz, Ch. Foidl, and R. Dirl: Quantum Phase Space Dynamics of Hard Rod Systems	267
H.H. Grelland: An Introduction to Tomita Representations in Physics	270
H.G. Miller and H. Kohl: A Semiclassical Scheme for the Description of the Static Properties of Nuclei at Finite Temperatures	273
F. Barocchi, M. Neumann, and M. Zoppi: Wigner-Kirkwood Expansion and Many Body Quantum Corrections Calculations	276
M. Płoszajczak, M.J. Rhoades-Brown, and M.E. Carrington: A General Approximation Scheme for Quantum Many Body Dynamics	279

D. Other Semiclassical Theories

J.R. Klauder: Coherent States and the Global, Uniform Approximation of Wave Equation Solutions	290
J.B. Delos: Quantum Wave-Functions from Classical Phase Space-Manifolds: An Introduction to Maslov's Semiclassical Theory	299
K. Yabana and H. Horiuchi: Semiclassical Analysis of Coupled Channel System with Non-Local Interaction	302
J.K. Thirber and T. Ajanapon: A Functional Density Matrix for Quantum Electrodynamics and Its Classical Limit	305
T.A. Osborn and F.H. Molzahn: Structural Connections Between the WKB and Wigner-Kirkwood Semiclassical Approximations	308
F.H. Molzahn and T.A. Osborn: Simple Connected Graph Expansions of Propagators	311
S.K. Kim: Theorem on the Schwinger Representations of Lie Groups and Its Application to the Coherent States and the Vibron Model	314
J.P. Ralston: Multiple-Path Expansion in Quantum Mechanics and Quantum Field Theory	319
F.S. Henyey: Strange Semiclassical Phenomena for the Equation $\nabla^2 \partial_z^2 \phi + A(\partial_x^2 + \partial_y^2) \phi + B \partial_z^2 \phi = 0$, Describing Waves in Stratified Fluids	322

E. Symplectic Geometry and Quantization

S.T. Ali and H.D. Doebner: Quantization, Topology, and Ordering	330
D.J. Simms: The Differential Geometry of Phase Space and Quantisation	347
M. Moshinsky: The Structure of Phase Space and Quantum Mechanics	350
A. Ashtekar, L. Bombelli, and R.K. Koul: Phase Space Formulation of General Relativity Without a 3+1 Splitting	356
G.A. Goldin, R. Menikoff, and D.H. Sharp: Diffeomorphism Groups, Coadjoint Orbits, and the Quantization of Classical Fluids	360
G.A. Goldin, R. Menikoff, and D.H. Sharp: Quantized Vortex Filaments in Incompressible Fluids	363
J.A. Brooke: Symplectic Geometry of the Relativistic Canonical Commutation Relations	366
V. Aldaya, J.A. Azcárraga, and J. Bisquert: Three Physical Quantum Manifolds from the Conformal Group	369
L.A. Ibort: Reduction of Degenerate Lagrangians and the Symplectic Reduction Theorem	372
M.J. Gotay: Formal Quantization of Quadratic Momentum Observables	375
D. McMullan: The Use of Ghost Variables in the Description of Constrained Systems	380

E.-B. Lin: Geometric Quantization of Particles in Quark Model	383
J.F. Carinena, M.A. del Olmo, and M.A. Rodríguez: Cohomology and Locally-Hamiltonian Dynamical Systems	386
A. Das: The Third Quantization of Phase Space and Bilocal Lattice Fields ..	389
H. Horiuchi and K. Yabana: Pauli-Forbidden Region in the Phase Space of the Inter-Nucleus Relative Motion	395
S. Iida: Quantum Corrections to Time-Dependent Mean-Field Method - Case of a Spin System	398
A.O. Barut: The Remarkable Phase Space of the Radiating Electron	401
A. Unterberger: The Quantization of Symmetric Spaces and Its Applications .	404
S.A. Fulling and G. Kennedy: A Closed Form for the Intrinsic Symbol of the Resolvent Parametrix of an Elliptic Operator	407
B. Lesche and T.H. Seligman: Quantum Mechanics in Coherent Algebras on Phase Space	410
 F. Relativity, Quantum Mechanics, and Thermodynamics	
H.E. Brandt: Maximal-Acceleration Invariant Phase Space	414
S. Catto: Octonionic Hadronic Supersymmetry and Linearly Rising Regge Trajectories	417
Y.S. Kim, D. Han, and D. Son: Rotations and Gauge Transformations	420
P. Feinsilver: Heisenberg Algebras in the Theory of Special Functions	423
F.E. Schroeck, Jr.: Experimental and Philosophical Foundations of the Formalism of Stochastic Quantum Mechanics	426
H.A. Warchall: Explicit Multidimensional Solitary Wave Solutions to Nonlinear Evolution Equations	429
H.E. Kandrup: Entropy, Frequency Mixing, and Particle Creation	432
D. Pavón: The Entropy of Hawking Radiation	435
G.J.M. Verstraeten: Thermodynamical Reduction of the Anisotropy of Time by Introducing Irreversibility on Microscopical Scale	438
G.P. Beretta: Steepest Entropy Ascent in Quantum Thermodynamics	441
List of Participants	444
