<b>1</b>	<b>Introduction</b>	<b>1</b>
----------	---------------------	----------

## **Part I From Galileo to Minkowski**

<b>2</b>	<b>On the Impossibility of Detecting Uniform Motion</b>	<b>15</b>
2.1	Aristotle's View on Motion	16
2.2	Copernicus and Ptolemy's Arguments Against the Earth's Motion	18
2.3	Galileo's Disproof of Aristotle's View on Motion	19
2.4	Galileo's Principle of Relativity	26
<b>3</b>	<b>Exploring the Internal Logic of Galileo's Principle of Relativity</b>	<b>29</b>
3.1	On the Physical Meaning of Galileo's Principle of Relativity	30
3.2	On the Two Postulates of Special Relativity	49
3.3	A Lesson from a Delayed Discovery	51
3.4	Summary	52
<b>4</b>	<b>Relativity in Euclidean Space and in Spacetime</b>	<b>55</b>
4.1	Spacetime	56
4.2	Derivation of the Lorentz Transformations	70
4.3	Four-Dimensional Distance and Three Kinds of Length	77
4.4	Y 'Dilation' in Euclidean Space and Time Dilation in Spacetime	83
4.5	Length Contraction in Euclidean Space and in Spacetime	89
4.6	The Twin Paradox in Euclidean Space and in Spacetime	96
4.7	Addition of Velocities	103
4.8	The Metric of Spacetime	103
4.9	On Coordinate and Proper Time	104

4.10	Four-Velocity, Four-Momentum, and Relativistic Mass . . . . .	111
4.11	Summary . . . . .	116

## **Part II On the Nature of Spacetime: Conceptual and Philosophical Issues**

<b>5</b>	<b>Relativity and the Dimensionality of the World:</b>	
	<b>Spacetime Is Real . . . . .</b>	<b>121</b>
5.1	Has Special Relativity Posed the Greatest Intellectual Challenge to Humankind? . . . . .	122
5.2	Relativity and Dimensionality of the World . . . . .	123
5.3	Length Contraction . . . . .	133
5.4	Time Dilation . . . . .	143
5.5	Relativization of Existence and the Twin Paradox . . . . .	146
5.6	Relativization of Existence and Observers in General Relativity . . . . .	150
5.7	Summary . . . . .	152
<b>6</b>	<b>Why Is the Issue of the Nature of Spacetime So Important? . . .</b>	<b>153</b>
6.1	One-Way Velocity of Light and Conventionality of Simultaneity . . . . .	155
6.2	Temporal Becoming . . . . .	162
6.3	Flow of Time and Consciousness . . . . .	167
6.4	Free Will . . . . .	172
6.5	Summary . . . . .	174

## **Part III Implications of the Reality of Spacetime for Physics**

<b>7</b>	<b>Propagation of Light in Non-Inertial Reference Frames . . . . .</b>	<b>183</b>
7.1	Acceleration Is Absolute in Special and General Relativity . .	183
7.2	The Need for Two Average Velocities of Light in Non-Inertial Reference Frames . . . . .	185
7.3	Average Coordinate Velocity of Light . . . . .	189
7.4	Average Proper Velocity of Light . . . . .	193
7.5	Shapiro Time Delay . . . . .	201
7.6	Probing the Anisotropic Velocity of Light by a Terrestrial Experiment . . . . .	204
7.7	On the Gravitational Redshift . . . . .	207
7.8	The Sagnac Effect . . . . .	216
7.9	Summary . . . . .	219

<b>8</b>	<b>Calculating the Electric Field of a Charge in a Non-Inertial Reference Frame</b>	221
8.1	Calculating the Potential of a Charge in a Non-Inertial Reference Frame	221
8.2	Common Physical Origin of the Liénard–Wiechert Potentials and the Potentials of a Charge in a Non-Inertial Reference Frame	225
8.3	Calculating the Electric Field of a Charge in a Non-Inertial Reference Frame	232
8.4	Summary	236
<b>9</b>	<b>Inertia as a Manifestation of the Reality of Spacetime</b>	237
9.1	Are Inertial Forces Real?	238
9.2	Inertial Forces Originate from a Four-Dimensional Stress Arising in the Deformed Worldtubes of Non-Inertial Bodies	240
9.3	Electromagnetic Mass and Inertia of the Classical Electron	246
9.4	The Standard Model and Inertia	255
9.5	Summary	263
<b>10</b>	<b>Spacetime and the Nature of Quantum Objects</b>	265
10.1	Is Quantum Mechanical Probability Objective?	266
10.2	The Nature of the Quantum Object and the Nature of Spacetime	268
10.3	Summary	275
<b>A</b>	<b>Quantum Mechanical Arguments Against the Reality of Spacetime</b>	277
<b>B</b>	<b>The Nature of Spacetime and Validity of Scientific Theories</b>	281
B.1	Reliability of Knowledge: Induction as Hidden Deduction	282
B.2	Correspondence Principle and Growth of Scientific Knowledge	286
B.3	Can an Accepted Scientific Theory Be Refuted?	290
B.4	Is a Final Scientific Theory Possible?	291
B.5	Summary	291
<b>C</b>	<b>Classical Electromagnetic Mass Theory and the Arguments Against It</b>	293
<b>D</b>	<b>Calculation of the Self-Force</b>	297
	<b>References</b>	301
	<b>Index</b>	309
