

Contents

Chapter 1. Particles and Waves	1
1. Generalized Coordinates	1
2. Energy Conservation	2
3. Principle of Virtual Work	3
4. Lagrange Equations	4
5. Hamilton's Principle of Least Action	7
6. Conservation Laws	10
7. The Center of Gravity Theorem	12
8. Symmetry and Invariance	16
9. Hamilton's Equations	19
10. Maupertuis' Least-Action Principle	22
11. Canonical Transformations	23
12. Poisson's Equations	27
13. Hamilton-Jacobi Equations	32
14. Propagation Equation of Geometric Optics	34
15. Mechanics and Waves	37
16. Wave Mechanics	39
17. Analytical Mechanics – Schematic Summary	46
 Chapter 2. Wave Mechanics	 49
1. Conservative Systems	50
2. Interpretations of the Wave Function	51
3. Mean Values of Observables	57
4. Heisenberg's Uncertainty Relation	58
5. Interpretations of Wave Mechanics	59
6. Wave Mechanics – Schematic Summary	79
 Chapter 3. One-Dimensional Systems	 81
1. Motion of the Center of Mass	81
2. General Properties of the Wave Function	83
3. Stationary Schrödinger Equation	85
4. Semi-classical (W.K.B.) Approximation	100

Chapter 4. Dirac Formalism	103
1. Postulates of Quantum Mechanics	106
2. Dirac Formalism	107
3. Observables	119
4. Complete Set of Compatible Observables	122
5. Heisenberg's Uncertainty Relations	123
6. Dirac Formalism – Schematic Summary	126
Chapter 5. Representations	127
1. Wave Mechanics	127
2. Matrix Mechanics	139
3. Wave Mechanics – Schematic Summary	151
4. Matrix Mechanics – Schematic Summary	152
Chapter 6. Quantum Dynamics	153
1. Time-Evolution Operator	153
2. Two Different Descriptions of Quantum Dynamics	158
3. The Correspondence Principle	162
4. Intermediate Description	164
5. Interpretation of Decoherence in Quantum Mechanics	167
6. Quantum Dynamics – Schematic Summary	173
Chapter 7. Path Integrals	175
1. Evolution of the Wave Function	175
2. Path Integrals	180
3. Equivalence to the Schrödinger Equation	185
4. Action in Quantum Physics	186
5. Quantum Paths and Fractals	187
6. Path Integrals – Schematic Summary	189
Chapter 8. Symmetries and Invariances	191
1. Unitary Transformations	192
2. Anti-unitary Transformations	199
3. Gauge Transformations	204
Chapter 9. Angular Momentum	211
1. General Definition	211
2. Standard Representation	213
3. Examples of Angular Momenta	220
4. Magnetic Moments	228
Chapter 10. Addition Theorems	237
1. Coupling of Two Angular Momenta	237
2. Clebsch–Gordan Coefficients	239
3. $3jm$ Coefficients	251

4. Coupling of n Angular Momenta	253
5. Change of Coupling Mode	256
6. Introduction to the Graphical Method	257
Appendix 1: Table of Selected $3jm$ and $6j$ Coefficients	265
Appendix 2: Diquark	266
Chapter 11. Rotations[†]	269
1. Introduction	269
2. Infinitesimal Rotations	270
3. Finite Rotations	271
4. Standard Representation	274
5. Fundamental Theorem of Pinch	286
6. Transformation Rules of Graphical Spin Algebra	287
Chapter 12. Spherical Harmonics	291
1. Orbital Angular Momentum	291
2. Spherical Harmonic $Y_{\ell 0}$	292
3. General Statement	294
4. Parity	295
5. Orthonormalization and Closure	295
6. Graphical Representation	296
7. Integration of Three Spherical Harmonics	297
8. Contraction	298
9. Addition Theorem	302
10. Coupled Spherical Harmonics	303
11. Solid Spherical Harmonics	304
12. Schrödinger Equation in a Central Potential	305
Chapter 13. Irreducible Tensor Operators	315
1. Definitions	315
2. Graphical Representation	316
3. Hermitian Conjugate	317
4. Scalar Product	318
5. Tensor Product	319
6. Standardization of a Vector Operator	321
7. Wigner–Eckart Theorem	331
8. Magnetic Moments	337
9. Density Operator	342
10. Differential Operators	348
11. Irreducible Tensor Operators – Schematic Summary	354
Appendix 1: Reduced Matrix Elements	355
Appendix 2: Graphical Vector Analysis	356

Chapter 14. Perturbations	361
1. Stationary Perturbations	361
2. Variational Method	374
3. Time-Dependent Perturbations	380
Chapter 15. Scattering of Particles	391
1. Scattering Operator	391
2. Transition Operator	393
3. Differential Cross Section	394
4. Scattering Amplitude and Interaction Potential	399
5. Lippmann–Schwinger Equations	401
6. Phase-Shift Method	404
7. Angular Distribution and Polarization	406
8. Scattering of Particles – Schematic Summary	415
Chapter 16. Second Quantization	417
1. One-Dimensional Harmonic Oscillator	417
2. The p -Dimensional Harmonic Oscillator	425
3. Bosons and Fermions	429
4. Fermion Systems	435
5. Boson Systems	451
6. Simple Harmonic Oscillator – Schematic Summary	459
7. Second Quantization – Schematic Summary	460
Appendix: The q -Commutators	461
Chapter 17. Boson Fields	467
1. Classical Field Theory	467
2. Massive Scalar Fields	469
3. Higgs Fields	473
4. The Electromagnetic Field	476
5. Quantization of a Boson Field	478
Chapter 18. Fermion Fields	483
1. Dirac Equation of a Free Particle	484
2. Dirac γ Matrices	486
3. The Adjoint Dirac Equation	488
4. Lagrangian Density and Field Equations	488
5. Probability Density	489
6. Gauge Invariance and Noether's Theorem	491
7. Interaction with the Electromagnetic Field	492
8. Local Gauge Invariance	493
9. Electron Spin	495
10. Solutions for a Free Electron	496
11. Charge Conjugation	499
12. Hydrogen Atom	501

13. Coulomb Elastic Scattering	505
14. Quantization of a Fermion Field	506
15. Dirac Equation – Schematic Summary	510
Chapter 19. Quantum X-Dynamics	511
1. Quantum Electrodynamics	511
2. Elementary Introduction to Quantum Chromodynamics	514
3. The GSW Standard Model	515
4. Grand Unification Theories	527
Appendix: Introduction to Supersymmetry	530
Chapter 20. Quantum Cosmology	539
1. Introduction	539
2. Essentials of General Relativity	541
3. The Correspondence Principle	546
4. Essentials of the Standard Model of Cosmology	547
5. Hamiltonian Statement of Einstein Equations	549
6. Fundamental Equation of Quantum Cosmology	557
7. Quantization in the Mini-Superspaces	568
Exercises	573
References	587
