<b>List of Contributors</b>	<b>XIX</b>
<b>Preface</b>	<b>XXV</b>
<b>A Personal Foreword</b>	<b>XXVII</b>

### Part I

<b>1</b>	<b>Process Logistics, Testing Strategies and Automation Aspects</b>	<b>3</b>
	<i>Hansjoerg Haas, Robert S. DeWitte, Robert Dunn-Dufault, and Andreas Stelzer</i>	
1.1	Introduction	3
1.2	The Process from Raw Ingredients to Data	3
1.2.1	Compound Management	5
1.2.2	Cell Biology	6
1.2.3	Lead Profiling	7
1.2.4	Liquid Chromatography/Mass Spectrometry	7
1.3	DMPK Testing Strategies: the Process from Data to Decisions	8
1.4	New Questions, New Assays and New Technologies Challenge the Process	10
1.5	Organizational Models to Scale Up the Process	11
1.5.1	Food Court	11
1.5.1.1	The Fast Food Restaurant	12
1.5.1.2	The Family Restaurant Chain	12
1.6	Critical Factors to Improve the Process	13
1.7	Materials in ADME/Tox Screening	14
1.8	Machines and Equipment in ADME/Tox Screening	17
1.8.1	Liquid Handlers	17
1.8.2	Detection and Analysis	17
1.9	Software, Data Retrieval, Analysis, Manipulation and Interpretation	18
1.10	Environment and Management = Organizational Structure in ADME/Tox Screening	19

1.11	Methods in ADME/Tox Screening	20
1.11.1	Examples of Whole-Process Approaches	20
1.11.1.1	Automation Islands with Manual Data Upload to a LIMS System	21
1.11.1.2	Complete Physical Integration and Automation	21
1.11.1.3	Federated Physical Automation with Software Integration	22
1.12	Conclusions	22
	References	23
<b>2</b>	<b>Prediction of Drug-Likeness and its Integration into the Drug Discovery Process</b>	<b>25</b>
	<i>Ansgar Schuffenhauer and Meir Glick</i>	
2.1	Introduction	25
2.2	Computational Prediction of Drug-Likeness	26
2.2.1	Machine Learning	26
2.2.2	Empirical Rules and Their Basis	30
2.2.3	Drug-Likeness of Natural Products	32
2.2.4	Do Ligands of Different Target Classes Differ in Their Drug-Like Properties?	34
2.2.5	Unwanted Structural Elements	34
2.3	What is the Best Practice in Utilizing Drug-Likeness in Drug Discovery?	35
2.4	Concluding Discussions	37
	References	38
<b>3</b>	<b>Integrative Risk Assessment</b>	<b>41</b>
	<i>Bernard Faller and Laszlo Urban</i>	
3.1	The Target Compound Profile	41
3.1.1	Introduction	41
3.1.2	The Importance of the Projected Clinical Compound Profile in Early Drug Discovery	42
3.1.3	The Impact of Delivery On the Design of the Drug Discovery Process	43
3.2	The Concept of Hierarchical Testing in Primary and Follow-Up Assays	45
3.2.1	Impact of Turn-Around Time	47
3.2.2	Assay Validation and Reference Compounds	47
3.2.3	Requirements of Profiling Assay Quality	48
3.2.4	The Importance of Follow-Up Assays	48
3.3	Exposure Assays	49
3.3.1	Basic Absorption Assays	49
3.3.1.1	Solubility Assays	50
3.3.1.2	Permeability Assays	50
3.3.2	Active Transports and Efflux	51
3.3.3	Metabolism	51
3.3.4	Distribution and Elimination	51
3.3.5	Drug–Drug Interactions	53

3.3.6	iviv Correlations	53
3.4	Iterative Assays: Link Between Assays	54
3.5	Specific Safety Profiling Assays	56
3.5.1	Sensitivity and Specificity of Safety Assays should be Adjusted to the Phase of Drug Discovery	58
3.5.2	Addressing Species Specificity in Early <i>In Vitro</i> Assays	58
3.6	Data Reporting and Data Mining	59
3.6.1	Decision Making: Trend Analysis, Go/No Go Decisions	60
3.7	Integrative Risk Assessment	61
	References	64

## Part II

<b>4</b>	<b>Solubility and Aggregation</b>	<b>71</b>
	<i>William H. Streng</i>	
4.1	Importance of Solubility	71
4.2	Factors Influencing Solubility	72
4.3	Methods Used to Determine Solubility	74
4.4	Approaches to Solubility	76
4.5	Solubility in Non-Aqueous Solvents and Co-Solvents	78
4.6	Solubility as a Function of pH	79
4.7	Effect of Aggregation Upon Solubility	83
4.8	Dependence of Dissolution upon Solubility	86
4.9	Partitioning and the Effect of Aggregation	87
4.10	Solubility in Simulated Biological Fluids	89
	References	90
<b>5</b>	<b><i>In Silico</i> Tools and <i>In Vitro</i> HTS Approaches to Determine Lipophilicity During the Drug Discovery Process</b>	<b>91</b>
	<i>Sophie Martel, Vincent Gasparik, and Pierre-Alain Carrupt</i>	
5.1	Introduction	91
5.2	Virtual Filtering: <i>In Silico</i> Prediction of log P and log D	92
5.2.1	Lipophilicity of Neutral Substances: <i>In Silico</i> Methods to Predict log $P_{oct}^N$	92
5.2.1.1	2D Fragmental Approaches	92
5.2.1.2	Prediction Methods Based on 3-D Molecular Structure	95
5.2.1.3	General Comments on the Prediction of log $P_{oct}$	96
5.2.2	Prediction Models for log P in Other Solvent/Water Systems of Neutral Compounds	97
5.2.3	Prediction Models for log P of Ionic Species (log $P^I$ )	97
5.3	Experimental Filtering: the ADMET Characterization of a Hit Collection	98
5.3.1	HTS log P/log D Determination Based on Microtiterplate Format	98
5.3.2	Chromatographic Methods	100

5.3.2.1	Reverse-Phase Liquid Chromatography	100
5.3.2.2	Immobilized Artificial Membranes	102
5.3.2.3	Hydrophilic Interaction Chromatography	103
5.3.2.4	Capillary Electrophoresis	104
5.3.3	A Global View On <i>In Vitro</i> HTS Methods to Measure log P/log D	104
5.4	Concluding Remarks: Efficacy or Accuracy Dilemma	105
	References	107
<b>6</b>	<b>Membrane Permeability – Measurement and Prediction in Drug Discovery</b>	<b>117</b>
	<i>Kiyohiko Sugano, Lourdes Cucurull-Sanchez, and Joanne Bennett</i>	
6.1	Overview of Membrane Permeation	117
6.1.1	Structure, Physiology and Chemistry of the Membrane	117
6.1.2	Passive Transcellular Pathway: pH Partition Theory as the Basis of Understanding Membrane Permeability	118
6.1.3	Paracellular Pathway	119
6.1.4	Active Transporters	119
6.1.5	<i>In Vitro</i> – <i>In Vivo</i> Extrapolation	119
6.2	<i>In Vitro</i> Cell Models	121
6.2.1	Intestinal Cell Culture Models	121
6.2.2	BBB Cell Culture Models	122
6.2.3	Cell Models to Study Active Transporters	123
6.2.4	Correlation of <i>in Vitro</i> Models to Human $P_{\text{eff}}$ and Fraction Absorbed Data	124
6.2.5	Correlation of Cell Culture Models with <i>In Vivo</i> Brain Penetration	124
6.3	Artificial Membranes	125
6.3.1	Partition and Permeation	125
6.3.2	Parallel Artificial Membrane Permeation Assay: Recent Progress	126
6.3.2.1	Understanding PAMPA	126
6.3.2.2	Variation of PAMPA: Recent Progress	127
6.3.2.3	Phospholipid Vesicle PAMPA	127
6.3.2.4	Phospholipid–Octanol PAMPA	127
6.3.2.5	Tri-Layer PAMPA	127
6.3.2.6	Mucus Layer Adhered PAMPA	127
6.3.3	Application of PAMPA for Drug Discovery	128
6.4	Limitation of <i>In Vitro</i> Assays	128
6.4.1	Impact of UWL on Permeability	128
6.4.2	Membrane Binding	129
6.4.3	Low Solubility	129
6.4.4	Difference of the Paracellular Pathway	129
6.4.5	Interlaboratory Variability	129
6.5	Computational Approaches/ <i>In Silico</i> Modeling	130

6.5.1	<i>In Vivo</i> Systems	130
6.5.2	<i>In Vitro</i> Cellular Membrane Systems	132
6.5.3	Artificial Membranes	134
6.5.4	Perspectives	135
6.6	Outlook	135
	References	136
<b>7</b>	<b>Drug Metabolism and Reactive Metabolites</b>	<b>145</b>
	<i>Alan P. Watt</i>	
7.1	Introduction to Drug Metabolism	145
7.1.1	Historical Perspective	145
7.1.2	<i>In Vitro</i> Metabolism	146
7.1.3	Cytochrome P450	148
7.1.4	Prediction of Drug Metabolism	149
7.2	Adverse Drug Reactions	149
7.2.1	ADR Classification	150
7.2.2	Idiosyncratic Drug Reactions	150
7.3	Bioactivation	151
7.3.1	Definition	151
7.3.2	Reactions of Electrophilic Metabolites	151
7.3.3	Glutathione	151
7.3.4	Detection of GSH Conjugates	151
7.3.5	Acyl Glucuronides	152
7.3.6	Free Radicals and Oxidative Stress	152
7.4	Reactive Metabolites and Idiosyncratic Toxicity	153
7.4.1	The Hapten Hypothesis	153
7.4.1.1	Immune-Mediated Cutaneous Reactions	153
7.4.2	The Danger Hypothesis	153
7.4.3	Alternate Perspectives to Covalent Binding	154
7.4.3.1	Non-Toxicological Covalent Binding	154
7.4.3.2	Covalent Binding as Detoxification	154
7.5	Measurement of Reactive Metabolites	155
7.5.1	Trapping Assays	155
7.5.1.1	Soft Nucleophiles	155
7.5.1.2	Hard Nucleophiles	155
7.5.2	Mass Spectrometric Detection of GSH Conjugates and Mercapturic Acids	155
7.5.3	Radiometric Assays	156
7.5.3.1	Covalent Binding to Liver Microsomes	157
7.5.3.2	<i>Ex Vivo</i> Covalent Binding	157
7.5.3.3	<sup>14</sup> C Cyanide Trapping	157
7.5.3.4	Radiolabeled Soft Nucleophile Trapping	158
7.5.4	Alternate Approaches	158
7.6	Strategies for Minimizing Reactive Metabolite Risk	159
7.6.1	Dose and Exposure	159

7.6.2	Structural Alerts	159
7.6.3	Cascade for Radiolabeled Covalent Binding Experiments	160
7.6.4	Criteria for Progression	160
7.7	Conclusions	160
	References	161
<b>8</b>	<b>Drug–Drug Interactions: Screening for Liability and Assessment of Risk</b>	<b>165</b>
	<i>Ruth Hyland, R. Scott Obach, Chad Stoner, Michael West, Michael R. Wester, Kuresh Youdim, and Michael Zientek</i>	
8.1	Introduction	165
8.2	<i>In Silico</i> Approaches	167
8.3	Perpetrators of Drug–Drug Interactions: Enzyme Inhibition	169
8.3.1	Competitive Inhibition	169
8.3.2	Conventional CYP Inhibition Screen	170
8.3.3	Fluorescent Inhibition Screen	172
8.3.4	DDI Single Point versus IC <sub>50</sub> Determinations	172
8.3.5	DDI Cocktail Assay	173
8.3.6	Mechanism-Based Inhibition	174
8.4	Perpetrators of Drug–Drug Interactions: Enzyme Induction	176
8.4.1	Ligand Binding Assay	177
8.4.2	Reporter Gene (Transactivation) Assays	178
8.4.3	Overall Evaluation of High-Throughput Induction Assays	179
8.5	Drug–Drug Interactions; Victims of Interaction; Reaction Phenotyping	179
8.5.1	Chemical Inhibition	180
8.5.2	Recombinant Human CYP Enzymes	181
8.6	Predictions of Drug–Drug Interactions	182
8.6.1	New Compounds as Potential DDI Perpetrators	183
8.6.2	New Compounds as Potential DDI Victims	184
8.7	Summary	187
	References	188
<b>9</b>	<b>Plasma Protein Binding and Volume of Distribution: Determination, Prediction and Use in Early Drug Discovery</b>	<b>197</b>
	<i>Franco Lombardo, R. Scott Obach, and Nigel J. Waters</i>	
9.1	Introduction: Importance of Plasma Protein Binding	197
9.2	Impact of Plasma Protein Binding on PK, Exposure, Safety Margins, Potency Screens and Drug–Drug Interaction	197
9.3	Methodologies for Measuring Plasma Protein Binding	201
9.4	Physicochemical Determinants and <i>In Silico</i> Prediction of Plasma Protein Binding	206
9.5	Volume of Distribution: General Considerations and Applications to Experimental Pharmacokinetics and Drug Design	208
9.5.1	Prediction of Human Volume of Distribution	210

9.5.1.1	Prediction of Human Volume of Distribution from Animal Pharmacokinetic Data	210
9.5.1.2	Prediction of Human Volume of Distribution from <i>In Vitro</i> Data	212
9.5.1.3	Prediction of Human Volume of Distribution from <i>In Silico</i> Methods	213
9.6	Relationship Between Clearance, VDss and Plasma Protein Binding	213
9.7	Summary and Conclusions	214
	References	215
<b>10</b>	<b>Putting It All Together</b>	<b>221</b>
	<i>Pamela Berry, Neil Parrott, Micaela Reddy, Pascale David-Pierson, and Thierry Lavé</i>	
10.1	Challenges in Drug Discovery	221
10.2	Methodological Aspects	222
10.2.1	PBPK	222
10.2.2	PK/PD	225
10.3	Strategic Use of PBPK During Drug Discovery	226
10.4	Strategic Use of PK/PD During Drug Discovery	227
10.5	Application During Lead Identification	227
10.6	Application During Lead Optimization	232
10.7	Application During Clinical Lead Selection	235
10.8	Limitations with Current Methodology and Approaches	236
10.9	Conclusions	238
	References	238

### Part III

<b>11</b>	<b>Genetic Toxicity: <i>In Vitro</i> Approaches for Hit and Lead Profiling</b>	<b>243</b>
	<i>Richard M Walmsley and Nicholas Billinton</i>	
11.1	Introduction	243
11.2	Definitions	245
11.3	Major Challenges for Early, Predictive Genotoxicity Testing	246
11.4	Practical Issues for Genotoxicity Profiling: Vehicle, Dose, Dilution Range and Impurity	248
11.4.1	Vehicle and Dose	248
11.4.2	Dilution Range	249
11.4.3	Purity	249
11.5	Computational Approaches to Genotoxicity Assessment: " <i>In Silico</i> " Assessment	250
11.5.1	How Should <i>In Silico</i> Methods be Applied in Hit and Lead Profiling?	252
11.6	Genotoxicity Assays for Screening	253
11.6.1	Gene Mutation Assays	254

11.6.2	The Ames Test and Variants	255
11.6.3	Mammalian Cell Mutation Assays	256
11.6.4	<i>Saccharomyces cerevisiae</i> ("Yeast") Mutation Assays	256
11.7	Chromosome Damage and Aberration Assays	256
11.7.1	Aberrations	256
11.7.2	Micronuclei	257
11.7.3	"Comet" Assay	258
11.7.4	DNA Adduct Assessment	258
11.7.5	Gene Expression Assays	259
11.7.5.1	Prokaryotic	259
11.7.5.2	Eukaryotic	259
11.8	Using Data from <i>In Vitro</i> Profiling: Confirmatory Tests, Follow-Up Tests, and the Link to Safety Assessment and <i>In Vivo</i> Models	260
11.8.1	Annotations from Screening Data	261
11.8.2	Annotations from Positive Screening Data	262
11.8.2.1	Gene Mutation Assays	262
11.8.2.2	Chromosome Damage Assays	262
11.8.2.3	Reporter Assays	263
11.9	Can a Genetic Toxicity Profile Inform <i>In Vivo</i> Testing Strategies?	263
11.9.1	Prospects for <i>In Vivo</i> Profiling of Hits and Leads for Genotoxicity	264
11.10	What to Test, When and How?	265
11.10.1	Profiling Entire Libraries: >100 000 Compounds/Year	265
11.10.2	Profiling Hits: 10 000–100 000 Compounds/Year	265
11.10.3	Profiling in Lead Optimization: 2000–10 000 Compounds/Year	266
11.11	Summary	267
	References	267
<b>12</b>	<b><i>In Vitro</i> Safety Pharmacology Profiling: an Important Tool to Decrease Attrition</b>	<b>273</b>
	<i>Jacques Hamon and Steven Whitebread</i>	
12.1	What is " <i>In Vitro</i> Safety Pharmacology Profiling?"	273
12.2	Examples of Drug Failures Due to Secondary Pharmacology	274
12.2.1	Components	275
12.2.1.1	Target Selection	275
12.2.1.2	Target Annotation	276
12.2.1.3	Examples of <i>In Vitro</i> Safety Pharmacology Profiling Panels	277
12.3	Processes	280
12.3.1	Assay Requirements and Technologies	280
12.3.2	Binding and/or Functional Assays	284
12.3.3	Processes and Logistics	286
12.4	Application to Drug Discovery	287
12.4.1	How and When to Use <i>In Vitro</i> Safety Pharmacology Profiling	287
12.4.2	Pharmacological Promiscuity and Its Clinical Interpretation	288
12.4.3	Relevance of Potency and Therapeutic Index (TI)	290

12.4.4	Possible Benefits of Off-Target Effects	291
12.5	Conclusions and Outlook	291
	References	292
<b>13</b>	<b>Knowledge-Based and Computational Approaches to <i>In Vitro</i> Safety Pharmacology</b>	<b>297</b>
	<i>Josef Scheiber, Andreas Bender, Kamal Azzaoui, and Jeremy Jenkins</i>	
13.1	Introduction	297
13.1.1	The Value of Safety Pharmacology Data: the Value and Relevance of Complete, Standardized Data Matrices for <i>In Silico</i> Prediction of Adverse Events	298
13.2	"Meta Analysis" of Safety Pharmacology Data: Predicting Compound Promiscuity	304
13.2.1	Introduction	304
13.2.2	Data Analysis	305
13.2.2.1	Hit Rate Parameter and Chemical Profiling	305
13.2.2.2	Computational Efforts: Generation of Hypotheses	307
13.2.2.3	Promiscuity and Attrition Rate	308
13.2.2.4	Conclusion on Promiscuity Prediction	310
13.3	Prediction of Off-Target Effects of Molecules Based on Chemical Structure	310
13.3.1	Introduction	310
13.3.2	Available Databases and Desired Format	311
13.3.3	The Best Established Technologies for <i>In Silico</i> Target Fishing	313
13.3.3.1	Similarity Searching in Databases	313
13.3.3.2	Data Mining in Annotated Chemical Databases	314
13.3.3.3	Data Mining on Bioactivity Spectra	314
13.4	Future Directions	316
	References	317

## Part IV

<b>14</b>	<b>Discovery Toxicology Screening: Predictive, <i>In Vitro</i> Cytotoxicity</b>	<b>325</b>
	<i>Peter J. O'Brien</i>	
14.1	Introduction	325
14.2	Basis of Need for Discovery Toxicology Screening	326
14.2.1	High Attrition at High Cost	326
14.2.2	High Proportion of Attrition Due to Adverse Safety	326
14.2.3	Discovery Screening Reduces Attrition by An Order of Magnitude	326
14.3	Obstacles to Discovery Toxicology Screening	327
14.4	Need to Coordinate Cytotoxicity Screening with Other Discovery Safety Assessments	327
14.5	Discovery Cytotoxicology	329
14.5.1	Biomarkers for Safety versus Efficacy for Screening	329

14.5.2	Past Failure of Cytotoxicity Assessments	329
14.5.2.1	Insufficient Exposure	329
14.5.2.2	Measurement of Cell Death	330
14.5.3	Effective Cell-Based Assays for Marked and Acute Cytotoxicity	331
14.5.4	Characteristics of an Optimally Effective Cell Model of Toxicity	331
14.5.4.1	Need for Morphological and Functional Parameters	333
14.5.4.2	Need for Multiple and Mechanistic Parameters	333
14.5.4.3	Need for Single-Cell Monitoring	333
14.5.4.4	Need for Effective Parameters	334
14.5.4.5	Need for Validation with Human Toxicity Data	336
14.6	High Effectiveness of an HCA Cell Model in Predictive Toxicology	337
14.6.1	Background on HCA	337
14.6.2	Idiosyncratic Hepatotoxicity	337
14.6.3	Characteristic Pattern and Sequence of Cytotoxic Changes	338
14.6.4	Safety Margin	338
14.6.5	Hormesis	338
14.6.6	Implementation of HCA Cytotoxicity Testing in Drug Discovery	339
14.6.7	Limitations of HCA Cytotoxicity Testing in Drug Discovery	340
14.7	Future Impact of Cytotoxicity Testing	340
