PROTOCOL

Planning	2
Execution	2
Manufacturing	3
Finalisation	3

PLANNING

Initial examination and communication	11
Virtual planning	15
Digital Smile Design (DSD)	15
Photoshop Smile Design (PSD)	22
Virtual planning apps	23
Pre-prosthetic treatment.	29
Contraindications for prosthetic treatment.	30
Surgical treatment	37
Hygiene	43
Periodontal treatment	45
Non-surgical periodontal therapy.	47
Initial periodontal treatment	47
Oral hygiene for perio patients	49
Diagnosing periodontal diseases.	50
Non-surgical treatment.	54
Re-evaluation and recall	63
Surgical periodontal treatment (resective, regenerative and mucogingival/plastic)	67
Clinical crown lengthening	67
Regenerative periodontal surgery	85
Mucogingival periodontal surgery	87

Restorative dental medicine	91
Treatment for caries lesions	93
Treatment for non-caries lesions	95
Direct restorations	99
Tooth vitality assessment	107
Endodontic treatment	109
Indications for endodontic treatment	111
Phases of endodontic treatment	113
Indications for endodontic retreatment	129
Indications for endodontic microsurgery	131
Dental care after endodontic treatment	133
Post and core	135
Root canal preparation for the post	140
Post and core fabrication.	142
Orthodontic treatment	143
Tooth whitening	151
Prosthetic treatment planning	165
Documentation	167
Dental photography and videography	167
Dental photography equipment	169
Digital single-lens reflex (DSLR) and mirrorless cameras	171
DSLR camera body	171
Mirrorless camera body	175
Lenses	176
Lighting	179
Camera settings	183
Exposure/shutter speed	183
Aperture (f)	185
ISO value: sensor sensitivity to light	189
White balance	190
Dental photography accessories	195
Dental photography protocol and aesthetic analysis	197
Portrait photography	197
Access to the patient	203
Serious portrait photograph	203
Smile portrait photograph	205
Retracted portrait photograph	207
Macro smile photograph	207
12 o'clock photograph.	208
Intraoral photographs	209
Basic protocol for intraoral photographs.	209
Full protocol for intraoral photography (oral rehabilitation)	213
Macro photography of the model and prosthetic restoration	217
Video documentation	219
Recording equipment	219
Recording cameras.	219
Lenses	220
Lighting	220
DSLR camera settings for video recording	221
Video recording protocol in dental medicine	222
Video recording and editing	223

Communication between the doctor and dental technician	225
Decision: analogue or digital prosthetic treatment	225
Dental materials	227
Alloys	230
Analogue approach	230
Digital-analogue approach.	231
Polymers	233
Polymethyl methacrylate (PMMA).	233
Analogue approach	233
Digital approach	235
Composites	239
Analogue approach	239
Digital approach	242
Ceramics	242
Ceramics with glass	245
Ceramics for layering (natural and synthetic)	245
Analogue approach.	245
Layering without a framework	249
Layering on the framework (alloys or ceramics)	250
Digital approach	252
Ceramics for cores and monolithic restorations	253
Glass-infiltrated ceramics	253
Glass-ceramics.	253
Ceramics without glass (polycrystalline).	257
Selection of materials/system	263
Analogue and digital planning	275
Analogue planning	277
Dental photography.	277
Communication	277
Dental impressions	291
Anatomical impression materials	291
Anatomical impression trays	295
Impression technique	298
Interocclusal records	299
Maximum intercuspation	301
Centric relation	302
Physiological rest position.	304
Physiognomy	305
Phonation	306
Skeletal classes	306
Interocclusal registration methods	310
Facebow	316
Arbitrary facebow	319
Kinematic facebow	321
Additional information (concepts of occlusion, protrusion and laterotrusion)	322
Concepts of occlusion	322
Protrusion	323
Protrusion registration	325
Laterotrusion	327
Laterotrusion registration	328

Wax-up	331
Study casts	332
Wax and wax-up technique	335
Aesthetics and the anterior teeth	335
Function and the posterior teeth	339
Digital planning	349
Dental photography.	351
Digital impression/scan	359
Intraoral scanners (IOSs)	361
Scanning techniques	364
Maxillomandibular records (bite scans)	366
Digital facebows	369
Additional information	372
3D radiographic imaging	372
Facial scans	373
Digital wax-up	375
Extraoral scanners	376
CAD software	379
CAD technique	380
Digital wax-up	380
3D printers.	385
Mock-up	391
Non-invasive mock-up	393
Invasive mock-up	397
Final mock-up	399
Silicone index	401
Fabrication of silicone indices	403
Materials used for mock-up	406
Communication	408

EXECUTION

Tooth preparation	417
Tooth preparation principles	417
Minimally invasive preparation: functional durability	418
Retention and adhesion	422
Tooth preparation: retention	423
Tooth preparation: adhesion	426
Margin preparation: soft tissue	429
Margin preparation design	433
Optical devices	437
Dental loupes	437
Dental microscopes	442
Mock-up and guided tooth preparation	447
Preparation guides.	453
First preparation	457
Second preparation.	465
Impression taking	473
Soft tissue impression management	475
Single-cord technique	477
Additional techniques	479
Double-cord technique.	481
Analogue impression	483
Impression materials	485
Hydrophilicity	487
Other properties of impression materials	489
Impression trays	491
Impression techniques: working casts	493
Digital impression	501
Bite registration	507
Additional information	517
Tooth colour	522
In-office provisionals.	527

MANUFACTURING

Casts 543

 Analogue casts 543

 Alveolar cast 549

 Working cast with factory elements 549

 Digital casts 553

 Extraoral scanning procedure 557

Articulators 559

 Analogue articulators 559

 Digital articulators 565

Interocclusal relation transfer 567

 Cross-mounting technique 567

 Digital overlapping 575

Laboratory provisionals 579

 Milling machines 581

FINALISATION

Analogue laboratory finalisation and try-in.	595
First try-in: framework of the restoration	595
Second try-in: layering	603
Third try-in: glazing.	613
Digital laboratory finalisation and try-in	617
Cementation	625
Temporary cementation	625
Permanent cementation	627
Classic (conventional) cementation	629
Adhesive cementation	633
Composite resin cement	639
Light-curing resin cements and cementation technique	639
Dual-curing resin cements and cementation technique	647
Core buildup materials	649
Indications for the different types of cementation	651
Maintenance.	653
Elementary phase: planning.	662
Communication phase: execution	663
Analysis phase: manufacturing	664
Final adjustment phase: finalisation.	665
