Preface — VII

Units of Measure (UOM) — XV

1 Introduction — 1

- 1.1 Systems view of industrial process plant and plant utility system — 2
- 1.2 Overview of utility subsystems — 5
 - 1.2.1 Steam subsystem — 5
 - 1.2.2 Fuel subsystem — 6
 - 1.2.3 Electrical power subsystem — 7
 - 1.2.4 Cooling water subsystem — 9
 - 1.2.5 Compressed air subsystem — 9
- 1.3 The sample utility system and its characteristics — 9
- 1.4 Overview of optimization — 14
 - 1.4.1 Basics — 14
 - 1.4.2 Optimization in simple terms — 15
 - 1.4.3 Optimization formal definition — 18
- 1.5 Overview of optimization modeling — 20
 - 1.5.1 Shortcomings of subsystem optimization — 20
 - 1.5.2 Missed opportunities by suboptimizations — 23
 - 1.5.3 Modeling philosophy — 23
- 1.6 Overview of MILP solvers — 26
 - 1.6.1 Using Excel Solver — 27
 - 1.6.2 Using LINGO — 30
 - Summary — 32
 - Nomenclature — 33
 - References — 34

Part I: Model development

2 Modeling basics — 39

- 2.1 Enumerate constants — 39
- 2.2 Enumerate operating modes and degrees of freedom — 41
- 2.3 Enumerate variables — 42
- 2.4 Develop relationships among variables — 42
- 2.5 Component model testing — 44
 - Summary — 44
 - Nomenclature — 45
 - References — 45

3 Modeling boilers — 46

- 3.1 Boiler #1 modeling — 47
- 3.1.1 Boiler #1: ON/OFF mode considerations — 47
- 3.1.2 Boiler #1: material balances — 48
- 3.1.3 Boiler #1: energy balance — 49
- 3.1.4 Boiler #1 base model: BL1-v1 — 51
- 3.1.5 Boiler #1: model with standby capability: BL1-v2 — 54
- 3.1.6 Boiler #1 model with segmented performance curve: BL1-v3 — 57
- 3.2 Boiler #2 modeling — 62
- 3.2.1 Boiler #2 model consuming two fuels in any proportion: BL2-v1 — 64
- 3.3 Boiler #3 modeling — 65
- 3.3.1 Boiler #3 model: selecting between two possible fuels: BL3-v1 — 65
- 3.4 Boiler subsystem model: BLSS-v1 — 68
- Summary — 71
- Nomenclature — 72
- References — 73

4 Modeling rotating equipment — 74

- 4.1 Modeling electric motors — 75
- 4.2 Modeling steam turbines — 78
- 4.3 Modeling internal combustion engines — 80
- 4.4 Modeling pumps — 81
- 4.5 Modeling a pump with a motor driver — 85
- 4.6 Modeling a pump with turbine drive — 86
- 4.7 Modeling a pump with dual drives — 87
- 4.8 Modeling boiler auxiliary fans and blowers — 89
- 4.9 Modeling compressors — 95
- Summary — 97
- Nomenclature — 98
- References — 99

5 Modeling turbogenerators — 100

- 5.1 Modeling non-condensing, back pressure, steam
 turbogenerators — 100
- 5.2 Modeling condensing extraction turbogenerators — 102
- 5.3 Modeling gas turbogenerators — 104
- Summary — 109
- Nomenclature — 109
- References — 110

6	Modeling the steam subsystem — 111
6.1	Modeling pressure reducing valves (PRV) — 111
6.1.1	Modeling PRVs without de-superheating — 111
6.1.2	Modeling PRV with de-superheating — 112
6.1.3	Modeling a vent — 113
6.2	Modeling blowdown flash unit — 114
6.3	Modeling deaerator unit — 115
6.4	Modeling headers — 117
6.5	Modeling the steam subsystem — 119
	Summary — 124
	Nomenclature — 125
	References — 126
7	Expanding the model — 127
7.1	Available, unavailable, and required specifications — 128
7.2	Modeling fuel subsystem — 130
7.3	Modeling electrical power subsystem — 130
7.4	Modeling cooling water subsystem — 134
7.5	Modeling with general integers — 134
7.6	Compressed air subsystem model — 137
7.7	The integrated utility system model — 137
	Summary — 145
	Nomenclature — 146
	References — 149
8	Modeling purchased energy contracts — 150
8.1	Fuel pricing — 150
8.1.1	Spot market contract — 150
8.1.2	Take or pay contract — 151
8.1.3	Excess penalty contract — 152
8.1.4	Volume discount contract — 153
8.1.5	Multitier pricing contract — 155
8.2	Electrical power pricing — 159
8.2.1	Energy and demand charges — 159
8.2.2	Time of use (TOU) rates — 160
8.3	Flow equalization in equipment operating in parallel — 160
8.3.1	Boiler feed water pump flow equalization — 161
8.3.2	Cooling water pump flow equalization — 163
8.4	Completing the utility system model — 165
	Summary — 173
	Nomenclature — 173
	References — 178

Part II: Model deployment

9 Offline optimization — 183

- 9.1 Case management — 183
- 9.2 Work flow for OFLO use cases — 186
 - Summary — 188
 - Nomenclature — 189
 - References — 190

10 Online, real-time optimization, RTO — 191

- 10.1 DRPU concepts — 193
- 10.1.1 Existing automation — 193
- 10.1.2 Process measurements — 194
- 10.1.3 Data reconciliation — 196
- 10.1.4 Parameter updating — 197
- 10.2 Utility system real-time optimization execution cycle — 198
- 10.2.1 Step 1: Retrieve live data — 199
- 10.2.2 Step 2: Data reconciliation and parameter updating (DRPU) — 200
- 10.2.3 Step 3: Send biases to the optimizers — 216
- 10.2.4 Step 4: Continuous optimization: COPT — 217
- 10.2.5 Step 5: Download COPT results — 219
- 10.2.6 Step 6: Discrete optimization: DOPT — 221
- 10.2.7 Step 7: Download DOPT results — 222
 - Summary — 229
 - Nomenclature — 229
 - References — 233

Appendix A: List of models — 235

Index — 239
