

Contents

1	Introduction	1
1.1	Trajectory Planning and Tracking	2
1.2	Equivalence and Flatness	3
1.3	Equivalence in System Theory	5
1.4	Equivalence and Stability	5
1.5	What is a Nonlinear Control System?	6
1.5.1	Nonlinearity versus Linearity	6
1.5.2	Uncontrolled versus Controlled Nonlinearity	7

Part I THEORY

2	Introduction to Differential Geometry	13
2.1	Manifold, Diffeomorphism	14
2.2	Vector Fields	17
2.2.1	Tangent space, Vector Field	17
2.2.2	Flow, Phase Portrait	19
2.2.3	Lie Derivative	21
2.2.4	Image of a Vector Field	22
2.2.5	First Integral, Straightening Out of a Vector Field	23
2.2.6	Lie Bracket	25
2.2.7	Distribution of Vector Fields	28
2.2.8	Integral Manifolds	29
2.2.9	First Order Partial Differential Equations	30
2.3	Differential Forms	32
2.3.1	Cotangent Space, Differential Form, Duality	32
2.3.2	Exterior differentiation	35
2.3.3	Image of a Differential Form	36
2.3.4	Pfaffian System, Complete Integrability	37
2.3.5	Lie Derivative of a 1-Form	39
2.3.6	Back to Frobenius Theorem	41

3	Introduction to Dynamical Systems	43
3.1	Recalls on Flows and Orbits	45
3.1.1	Equilibrium Point, Variational Equation	45
3.1.2	Periodic Orbit	47
3.1.3	Poincaré's Map	50
3.2	Stability of Equilibrium Points and Orbits	53
3.2.1	Attractor	53
3.2.2	Lyapunov Stability	55
3.2.3	Remarks on the Stability of Time-Varying Systems	58
3.2.4	Lyapunov's and Chetaev's Functions	59
3.2.5	Hartman-Grobman's and Shoshitaishvili's Theorems, Centre Manifold	64
3.3	Singularly Perturbed Systems	73
3.3.1	Invariant Slow Manifold	75
3.3.2	Persistence of the Invariant Slow Manifold	76
3.3.3	Robustness of the Stability	78
3.3.4	An Application to Modelling	79
3.4	Application to Hierarchical Control	81
3.4.1	Controlled Slow Dynamics	81
3.4.2	Hierarchical Feedback Design	82
3.4.3	Practical Applications	83
4	Controlled Systems, Controllability	87
4.1	Linear System Controllability	87
4.1.1	Kalman's Criterion	87
4.1.2	Controllability Canonical Form	90
4.1.3	Motion Planning	93
4.1.4	Trajectory Tracking, Pole Placement	95
4.2	Nonlinear System Controllability	96
4.2.1	First Order and Local Controllability	96
4.2.2	Local Controllability and Lie Brackets	97
4.2.3	Reachability	101
4.2.4	Lie Brackets and Kalman's Criterion for Linear Systems	104
5	Jets of Infinite Order, Lie-Bäcklund's Equivalence	107
5.1	An Introductory Example of Crane	107
5.2	Description of the System Trajectories	109
5.3	Jets of Infinite Order, Change of coordinates, Equivalence	113
5.3.1	Jets of Infinite Order, Global Coordinates	114
5.3.2	Product Manifolds, Product Topology	114
5.3.3	Cartan Vector Fields, Flows, Control Systems	115
5.3.4	Lie-Bäcklund Equivalence	121
5.3.5	Properties of the L-B Equivalence	125
5.3.6	Endogenous Dynamic Feedback	127

6	Differentially Flat Systems	131
6.1	Flat System, Flat Output	131
6.2	Examples	133
6.2.1	Mass-Spring System	133
6.2.2	Robot Control	134
6.2.3	Pendulum	135
6.2.4	Non Holonomic Vehicle	138
6.2.5	Vehicle with Trailers	139
6.3	Flatness and Controllability	141
6.4	Flatness and Linearization	143
6.4.1	Mass-Spring System (followed)	144
6.4.2	Robot Control (followed)	145
6.4.3	Pendulum (followed)	145
6.4.4	Non Holonomic Vehicle (followed)	146
6.5	Flat Output Characterization	146
6.5.1	The Ruled Manifold Necessary Condition	148
6.5.2	Variational Characterization	151
6.5.3	The Polynomial Matrix Approach	152
6.5.4	Practical Computation of the Smith Decomposition	155
6.5.5	Flatness Necessary and Sufficient Conditions	157
6.5.6	The Operator $\mathfrak{D}$	160
6.5.7	Strong Closedness Necessary and Sufficient Conditions	163
6.5.8	Flat Outputs of Linear Controllable Systems	167
6.5.9	Examples	170
7	Flatness and Motion Planning	181
7.1	Motion Planning Without Constraint	182
7.1.1	The General Case	182
7.1.2	Rest-to-Rest Trajectories	184
7.2	Motion Planning With Constraints	185
7.2.1	Geometric Constraints	186
7.2.2	Quantitative Constraints	189
7.3	Application to Predictive Control	190
8	Flatness and Tracking	193
8.1	The Tracking Problem	193
8.1.1	Pendulum (conclusion)	194
8.1.2	Non Holonomic Vehicle (conclusion)	195
8.2	Control of the Clock	197

Part II APPLICATIONS

9	DC Motor Starting Phase	203
9.1	Tracking of a Step Speed Reference	204
9.2	Flatness Based Tracking	206

10	Displacements of a Linear Motor With Oscillating Masses	211
10.1	Single Mass Case	212
10.1.1	Displacement Without Taking Account of the Auxiliary Mass	213
10.1.2	Displacements Taking Account of the Auxiliary Mass	214
10.1.3	Comparisons	216
10.2	Displacements With Two Auxiliary Masses	220
11	Synchronization of a Pair of Independent Windshield Wipers	225
11.1	Introduction	225
11.2	The Model of a Single Wiper	228
11.3	Open Loop Synchronization of the Pair of Wipers by Motion Planning	229
11.4	Trajectory Tracking	233
11.5	Synchronization by Clock Control	235
12	Control of Magnetic Bearings	243
12.1	Analysis and Control of a Ball	245
12.1.1	Modelling	245
12.1.2	Current Control	246
12.1.3	Voltage Control	253
12.1.4	Hierarchical Control	255
12.2	The General Shaft	265
12.2.1	Modelling	266
12.2.2	Current Control	267
12.2.3	Hierarchical Control	269
12.3	Implementation	269
12.3.1	Observer Design	270
12.3.2	Digital Control	273
12.4	Experimental Results	273
12.4.1	Platform Description	273
12.4.2	Experiments	274
13	Crane Control	279
13.1	Orientation	279
13.2	Straight Line Displacement	282
13.2.1	Approximate Tracking of Straight Line by Hierarchical PID Control	282
13.2.2	Straight Line Tracking Without Small Angle Approximation	286
13.3	Obstacle Avoidance	290
13.3.1	Tracking With Small Angle Approximation	291
13.3.2	Tracking Without Small Angle Approximation	293

Contents	xiii
14 Automatic Flight Control Systems	295
14.0.3 Generic Aircraft Model	296
14.0.4 Flatness Based Autopilot Design	299
