

Contents

1. Introduction	1
2. Supersymmetric Quantum Mechanics	7
2.1 Definition of SUSY Quantum Mechanics	7
2.1.1 The Pauli Hamiltonian ($N = 1$)	9
2.1.2 Witten's SUSY Quantum Mechanics ($N = 2$)	10
2.1.3 Nicolai's Supersymmetric Harmonic-Oscillator Chain	11
2.2 Properties of $N = 2$ SUSY Quantum Mechanics	12
2.2.1 The Witten Parity	13
2.2.2 SUSY Transformation	15
2.2.3 Ground-State Properties for Good SUSY	16
2.2.4 The Witten Index	17
2.2.5 SUSY and Gauge Transformations	19
3. The Witten Model	21
3.1 Witten's Model and Its Modification	21
3.2 Witten Parity and SUSY Transformation	22
3.3 The SUSY Potential and Zero-Energy States	23
3.3.1 Ground State for Good SUSY	23
3.3.2 An Additional Symmetry	24
3.3.3 Asymptotic Behavior of the SUSY Potential	25
3.4 Broken Versus Good SUSY	27
3.5 Examples	29
3.5.1 Systems on the Euclidean Line	29
3.5.2 Systems on the Half Line	32
3.5.3 Systems on a Finite Interval	34
4. Supersymmetric Classical Mechanics	37
4.1 Pseudoclassical Models	37
4.2 A Supersymmetric Classical Model	38
4.3 The Classical Dynamics	39

4.4	Discussion of the Fermionic Phase	43
4.5	Quantization	46
4.5.1	Canonical Approach	47
4.5.2	Path-Integral Approach	49
5.	Exact Solution of Eigenvalue Problems	53
5.1	Supersymmetrization of One-Dimensional Systems	53
5.2	Shape-Invariance and Exact Solutions	58
5.2.1	An Explicit Example	62
5.2.2	Comparison with the Factorization Method	63
6.	Quasi-Classical Path-Integral Approach	67
6.1	The Path-Integral Formalism	67
6.1.1	The WKB Approximation in the Path Integral	68
6.1.2	Quasi-Classical Modification for Witten's Model	70
6.2	Quasi-Classical Quantization Conditions	73
6.3	Quasi-Classical Eigenfunctions	78
6.4	Discussion of the Results	79
6.4.1	Exactly Soluble Examples	79
6.4.2	Numerical Investigations	81
7.	Supersymmetry in Classical Stochastic Dynamics	93
7.1	Langevin and Fokker-Planck Equation	93
7.2	Supersymmetry of the Fokker-Planck Equation	95
7.3	Supersymmetry of the Langevin Equation	97
7.4	Implications of Supersymmetry	101
7.4.1	Good SUSY	101
7.4.2	Broken SUSY	105
8.	Supersymmetry in the Pauli and Dirac Equation	109
8.1	Pauli's Hamiltonian in Two and Three Dimensions	109
8.2	Pauli Paramagnetism of Non-Interacting Electrons, Revisited	112
8.2.1	Two-Dimensional Electron Gas	113
8.2.2	Three-Dimensional Electron Gas	115
8.2.3	The Paramagnetic Conjecture and SUSY	116
8.3	The Dirac Hamiltonian and SUSY	117
8.3.1	Dirac Hamiltonian with a Scalar Potential	118
9.	Concluding Remarks and Overview	121
