NMR of Molecules Oriented in Electric Fields 1

H. Pfeifer

Nuclear Magnetic Resonance and Relaxation of Molecules Adsorbed on Solids 53

Contents

I. Introduction	3
II. The Spin Hamiltonian of Molecules Partially Aligned by an External Electric Field	4
A. The Spin Hamiltonian	6
B. Tensorial Averages in Aligned Liquids	6
III. Examples	11
A. The Quadrupolar Splitting Induced by an External Electric Field .	11
B. The Dipole-Dipole Splitting Induced by an External Electric Field .	13
IV. Experiments	16
A. Quadrupolar Line Splittings Induced by an External Electric Field .	16
B. Dipolar Line Splittings Induced by an External Electric Field . . .	22
V. Some Model Calculations of the Alignment	26
A. The Lorentz Model	27
B. Onsager's Model	27
C. The Scholte Model	29
VI. Statistical Calculations of the Alignment	30
A. The Distribution Function	30
B. The Maxwell Field	32
C. Calculation of $\langle 3 \cos^2 \theta_k - 1 \rangle_E$ for Different Approximations . .	33
D. The Separation of Long Range Correlations	39
VII. Comparison between the Kerr Effect and the NMR Electric Field Effect .	42
A. Introduction	42
B. The Relation between the Kerr Constant of a Liquid and the Alignment	43
C. Comparison between Theory and Experiment	45

VIII. Concluding Remarks 47

 A. Angular Correlations in Liquids. 47

 B. The Effective Field Approximation 48

 C. Signs of Indirect Couplings 49

 D. Mixtures. Transfer of the Alignment from Polar to Non-polar
 Components 50
