Preface	xi
Acknowledgments	xv
1 Integral functors	1
1.1 Notation and preliminary results	2
1.2 First properties of integral functors	5
1.2.1 Base change formulas	8
1.2.2 Adjoints	12
1.3 Fully faithful integral functors	15
1.3.1 Preliminary results	15
1.3.2 Strongly simple objects	19
1.4 The equivariant case	24
1.4.1 Equivariant and linearized derived categories	24
1.4.2 Equivariant integral functors	29
1.5 Notes and further reading	30
2 Fourier-Mukai functors	31
2.1 Spanning classes and equivalences	32
2.1.1 Ample sequences	35
2.1.2 Convolutions	40
2.2 Orlov's representability theorem	44
2.2.1 Resolution of the diagonal	44
2.2.2 Uniqueness of the kernel	51
2.2.3 Existence of the kernel	54

2.3	Fourier-Mukai functors	60
2.3.1	Some geometric applications of Fourier-Mukai functors . . .	61
2.3.2	Characterization of Fourier-Mukai functors	71
2.3.3	Fourier-Mukai functors between moduli spaces	76
2.4	Notes and further reading	78
3	Fourier-Mukai on Abelian varieties	81
3.1	Abelian varieties	82
3.2	The transform	84
3.3	Homogeneous bundles	90
3.4	Fourier-Mukai transform and the geometry of Abelian varieties . .	91
3.4.1	Line bundles and homomorphisms of Abelian varieties . . .	91
3.4.2	Polarizations	94
3.4.3	Picard sheaves	95
3.5	Some applications of the Abelian Fourier-Mukai transform	97
3.5.1	Moduli of semistable sheaves on elliptic curves	97
3.5.2	Preservation of stability for Abelian surfaces	102
3.5.3	Symplectic morphisms of moduli spaces	104
3.5.4	Embeddings of moduli spaces	106
3.6	Notes and further reading	108
4	Fourier-Mukai on K3 surfaces	111
4.1	K3 surfaces	112
4.2	Moduli spaces of sheaves and integral functors	116
4.3	Examples of transforms	122
4.3.1	Reflexive K3 surfaces	124
4.3.2	Duality for reflexive K3 surfaces	125
4.3.3	Homogeneous bundles	131
4.3.4	Other Fourier-Mukai transforms on K3 surfaces	133
4.4	Preservation of stability	139
4.5	Hilbert schemes of points on reflexive K3 surfaces	142
4.6	Notes and further reading	145
5	Nahm transforms	147
5.1	Basic notions	148

5.1.1	Connections	148
5.1.2	Instantons	150
5.1.3	The Hitchin-Kobayashi correspondence	153
5.1.4	Dirac operators and index bundles	155
5.2	The Nahm transform for instantons	158
5.2.1	Definition of the Nahm transform	158
5.2.2	The topology of the transformed bundle	161
5.2.3	Line bundles on complex tori	161
5.2.4	Nahm transform on flat 4-tori	164
5.3	Compatibility between Nahm and Fourier-Mukai	165
5.3.1	Relative differential operators	165
5.3.2	Relative Dolbeault complex	166
5.3.3	Relative Dirac operators	170
5.3.4	Kähler Nahm transforms	171
5.4	Nahm transforms on hyperkähler manifolds	173
5.4.1	Hyperkähler manifolds	173
5.4.2	A generalized Atiyah-Ward correspondence	174
5.4.3	Fourier-Mukai transform of quaternionic instantons	178
5.4.4	Examples	180
5.5	Notes and further reading	181
6	Relative Fourier-Mukai functors	183
6.1	Relative integral functors	184
6.1.1	Base change formulas	185
6.1.2	Fourier-Mukai transforms on Abelian schemes	188
6.2	Weierstraß fibrations	189
6.2.1	Todd classes	190
6.2.2	Torsion-free rank one sheaves on elliptic curves	192
6.2.3	Relative integral functors for Weierstraß fibrations	193
6.2.4	The compactified relative Jacobian	197
6.2.5	Examples	199
6.2.6	Topological invariants	201
6.3	Relatively minimal elliptic surfaces	204
6.4	Relative moduli spaces for Weierstraß elliptic fibrations	208

6.4.1	Semistable sheaves on integral genus one curves	208
6.4.2	Characterization of relative moduli spaces	213
6.5	Spectral covers	217
6.6	Absolutely stable sheaves on Weierstraß fibrations	220
6.6.1	Preservation of absolute stability for elliptic surfaces	221
6.6.2	Characterization of moduli spaces on elliptic surfaces	225
6.6.3	Elliptic Calabi-Yau threefolds	228
6.7	Notes and further reading	231
7	Fourier-Mukai partners and birational geometry	233
7.1	Preliminaries	234
7.2	Integral functors for quotient varieties	238
7.3	Fourier-Mukai partners of algebraic curves	242
7.4	Fourier-Mukai partners of algebraic surfaces	242
7.4.1	Surfaces of Kodaira dimension 2	245
7.4.2	Surfaces of Kodaira dimension $-\infty$ that are not elliptic	245
7.4.3	Relatively minimal elliptic surfaces	248
7.4.4	K3 surfaces	249
7.4.5	Abelian surfaces	253
7.4.6	Enriques surfaces	254
7.4.7	Nonminimal projective surfaces	256
7.5	Derived categories and birational geometry	257
7.5.1	A removable singularity theorem	258
7.5.2	Perverse sheaves	264
7.5.3	Flops and derived equivalences	272
7.6	McKay correspondence	275
7.6.1	An equivariant removable singularity theorem	276
7.6.2	The derived McKay correspondence	277
7.7	Notes and further reading	279
A	Derived and triangulated categories	281
A.1	Basic notions	281
A.2	Additive and Abelian categories	283
A.3	Categories of complexes	287

A.3.1	Double complexes	292
A.4	Derived categories	295
A.4.1	The derived category of an Abelian category	295
A.4.2	Other derived categories	300
A.4.3	Triangles and triangulated categories	303
A.4.4	Differential graded categories	307
A.4.5	Derived functors	312
A.4.6	Some remarkable formulas in derived categories	328
A.4.7	Support and homological dimension	335
B	Lattices	339
B.1	Preliminaries	339
B.2	The discriminant group	341
B.3	Primitive embeddings	342
C	Miscellaneous results	347
C.1	Relative duality	347
C.2	Pure sheaves and Simpson stability	351
C.3	Fitting ideals	355
D	Stability conditions for derived categories	359
D.1	Introduction	359
D.2	Bridgeland's stability conditions	362
D.2.1	Definition and Bridgeland's theorem	363
D.2.2	An example: stability conditions on curves	369
D.2.3	Bridgeland's deformation lemma	371
D.3	Stability conditions on K3 surfaces	373
D.3.1	Bridgeland's theorem	374
D.3.2	Construction of stability conditions	375
D.3.3	The covering map property	380
D.3.4	Wall and chamber structure	382
D.3.5	Sketch of the proof of Theorem D.19	383
D.4	Moduli stacks and invariants of semistable objects on K3 surfaces .	385
D.4.1	Moduli stack of semistable objects	385
D.4.2	Sketch of the proof of Theorem D.35	386

D.4.3	Counting invariants and Joyce's conjecture for K3 surfaces	391
D.4.4	Some ideas from the proof of Theorem D.45	392
