

CONTENTS

INTRODUCTION TO RIGGED HILBERT SPACES (RHS)

Bengt Nagel

- 1. Background and Introduction1
- 2. Examples of Generalized Eigenfunctions4
- 3. Definition of Gelfand Triplet5
- 4. Countably-Hilbert Spaces6
- 5. Nuclear Space (Special Case)7
- 6. Nuclear Spectral Theorem8
- 7. References to Applications to Resonances and Virtual States9

COMPARISON BETWEEN DIFFERENT NOTIONS OF RESONANCES

Bernard Helffer

- 1. Introduction11
- 2. A Brief Review on the Analytic Distortion or Dilation Techniques12
 - From the Second Definition13
 - From the First Definition13
 - Case a. The Analytic Dilation (or Complex Scaling)13
 - Case b. The Exterior Scaling13
 - Case c. The “Regularized” Exterior Scaling (Hislop and Sigal)14
 - Case d. A “Linearized” Analytic Distortion15
- 3. Comparison to the Definition of Resonances by Helffer and Sjöstrand16
- 4. Final Remarks17

RESONANCES AND SEMICLASSICAL ANALYSIS

Johannes Sjöstrand

- 1. Introduction21
- 2. A General Theory22
- 3. Results when the Classical Dynamics is Simple25
- 4. Estimates on the Resonances in More General Situations28

RESONANCES WITH A BACKGROUND POTENTIAL

Erik Balslev

1. Introduction	35
2. Exponentially Decaying Perturbations	36
3. Background Potentials	39

Appendix : The Gamow Function Associated with an S-Wave Resonance	42
--	----

ON THE GENERAL INVERSION PROBLEM

Anders Melin

1. Introduction	47
2. Construction of Intertwining Operators	48
3. Trace Formulas	52
4. The Miracle	54

WEYL'S THEORY STUDIES AND THE ONE-DIMENSIONAL ALMOST PERIODIC SCHRÖDINGER EQUATION

Ladislav Trlifaj

1. Introduction	57
2. Elementary Formulas	59
3. Periodic Potentials	63
4. The Bloch-Weyl Functions	65
5. Inverse Problems	67
6. The Darboux Transformation	72
7. Conclusion	73

A GENERALIZATION OF ROUCHÉ'S THEOREM WITH APPLICATION TO RESONANCES

Heinz Siedentop

1. Introduction	77
2. Trace Ideals, Determinants, and All That	78
3. A Generalization of Rouché's Theorem for Trace Ideal Operators	80
4. Application to Resonances	82

GENERALIZATION OF MÜLLER'S VARIATIONAL PRINCIPLE

Geert-Ulrich Sölter

1. Introduction	87
2. An Exclusion Theorem for Operators with Hilbert-Schmidt Like Resolvents	88
3. General Exclusion Theorems for Eigenvalues and Other Parts of the Spectrum	90
4. The Affiliated Birman-Schwinger-Rollnik Kernel	91
5. Estimates for Trace Ideal Norms of w_λ in Arbitrary Dimension	92
6. The Modified Variational Principle of Müller	94
7. Rough Estimate for Resonances	95
7.1 Bounds for Resonances of Operators with Potentials with Compact Support in One Dimension	95
7.2 Bounds for Resonances of Operators with Dilation Analytic Potentials	96
7.3 Bounds for Resonances of Operators with Gauß Potentials in One Dimension	97
8. Summary	101
Appendix : The Spectrum of an Operator	102

RESONANCE STATE EXPANSIONS IN NUCLEAR PHYSICS

Tore Berggren

1. Ancestry: Gamow, Breit and Wigner, Siegert, Humblet and Rosenfeld ..	105
1.1 The Mittag-Leffler Side-Line	106
2. Completeness: How to Prove It, How to Extend the Proof	107
2.1 Regularization Methods and Their Justification	108
2.2 The Proof of Completeness	109
2.3 The Extension of the Proof to Resonant States	111
3. The Off-spring: Resonance State Expansions Based on Completeness ...	112
3.1 Some Properties of Bound, Resonant and Anti-Bound States	112
3.2 The Breit-Wigner Formula Revisited	115
4. The Next Generation: What More Can We Do?	116

MITTAG-LEFFLER EXPANSIONS IN NUCLEAR PHYSICS

<i>Jens Bang</i>	119
------------------------	-----

ON THE ANALYTICAL CONTINUATION OF THE PARTIAL WAVE S-MATRIX USING COMPLEX SCALING TECHNIQUES

Magnus Rittby, Nils Elander and Erkki Brändas

1. Introduction	129
2. Analytic Continuation of the Jost Functions and the S-Matrix	131
3. A Generalization of Levinson's Theorem	134
3.1. Derivation of a Generalized Levinson's Theorem	135
4. A Partial Wave S-Matrix Expansion	140
5. Connections with the Breit-Wigner Ansatz and the Fano Parameters	144
6. Connections with the Inverse Problem and Conclusions	146
Appendix : Derivation of Expansions for the S-Matrix	148

CALCULATION OF RESONANT WAVE FUNCTIONS IN NUCLEAR PHYSICS

Borbála Gyarmati

1. Introduction	153
2. One-Particle Resonances in Nuclear Physics	154
3. The Gamow Functions	155
4. The Computation of Gamow Functions	163
4.1 The Direct Numerical Integration: the Program GAMOW	164
4.2 An Approximation Method: The Potential Separable Expansion Method: The Code PSEUDO	165
5. Summary	174

THE USE OF GAMOW FUNCTIONS IN NUCLEAR PROBLEMS

Tamas Vertse, Patricia Curutchet and Roberto J. Liotta

1. Introduction	179
2. Basic Concepts	181
3. Normalization Procedures	182
4. Application of the Resonance States	185
4.1 One-Channel Case: Potential Scattering	185
4.2 Two-Channel Case: Isobaric Analogue Resonance in the $^{208}\text{Pb}(p, p)^{208}\text{Pb}$ Reaction	186
4.3 Giant Resonances	189

RESONANCES AS AN EIGENVALUE PROBLEM

Lidia S. Ferreira

1. Introduction	201
2. Gamow States in the General Context of Resonances	202
3. Eigenvalue Problem for Gamow Vectors	205
4. Gamow Vectors as a Basic Set of Functions	208
5. Conclusions	212

A MODEL FOR STUDYING TIME DEPENDENT QUANTUM MECHANICAL PROCESSES AND ITS APPLICATION FOR QUASI-STATIONARY STATES

János Révai

1. Introduction	215
2. Formulation of the Model	216
3. Solution of the Time Evolution Problem	217
4. Calculation of Transition Amplitudes	220
5. Numerical Results	225

Appendix : Formulas for Stationary Problems with One- and Two-Term Separable Potentials

One-Term Case	230
Two-Term Case	231

TIME-DEPENDENT DYNAMICS APPLIED TO ELECTRON TRANSFER

Erik Deumens and Yngve Öhrn

1. Introduction	233
2. Theory	234
3. Average Dynamics	237
4. Model	239
5. Transition Probabilities	243
6. Nonadiabatic Effects	247

SEMICLASSICAL DESCRIPTION OF RESONANCES

H. Jürgen Korsch

1. Introduction	253
2. Semiclassical Background	254
2.1 Free Propagation	254
2.2 Reflection from a Single Turning Point	255
2.3 Reflection from a Potential Barrier	255
2.4 Passage Through a Curve Crossing	258
3. Shape- and Orbiting-Resonances	260
4. Resonances for Purely Repulsive Potentials	263
5. Curve-Crossing: Feshbach Resonances and Predissociation	265
6. Resonances in Multiple Curve-Crossings	271
7. Numerical Techniques and General Remarks	276
Acknowledgements	278

REGGE POLES AND ATOM-MOLECULE DIFFRACTION

Karl-Erik Thylwe

1. Introduction	281
2. Complex Angular Momentum Theory	283
2.1 Partial Wave Expansion	284
2.2 S-Matrix Properties	285
2.3 Transformation of the Scattering Amplitude	290
3. Diffraction in $He - N_2$ Scattering	296
3.1 Diffraction Mechanism	297
3.2 Isotropic Potential Model	298
3.3 Anisotropic Potential Models	299
4. Summary and Conclusions	306
Acknowledgment	308

ENERGY SHIFTS AND WIDTHS IN ATOMIC
AND MOLECULAR PHYSICS: MULTICHANNEL APPROACH*Roland Lefebvre*

1. Introduction	313
2. Multichannel Complex Energy Quantization	315
3. Complex Potentials and Complex Rotation	320
3.1. Optical Potential	322

3.2. Complex Path (or Generalized Complex Rotation)	323
---	-----

TWO STUDY CASES IN THE CALCULATION OF RESONANCES USING THE MULTICHANNEL SCHRÖDINGER EQUATION

Mario A. Natiello and Alejandro R. Engelmann

Introduction	329
The Multichannel Schrödinger Equation	330
The Algorithm	332
Case 1: A Molecular Model	334
Case 2: The Helium Atom	338
Concluding Remarks	343
Acknowledgments	344

MULTICHANNEL COMPLEX SCALED TITCHMARSH WEYL THEORY. A MODEL FOR DIATOMIC FRAGMENTATION

Erkki Brändas, Magnus Rittby and Nils Elander

1. Introduction	345
2. Theory	347
2.1 Titchmarsh-Weyl's Theory for a Set of Singular Second-Order Differential Equations - A Way of Analyzing the Coupled Equations for a Continuum Problem	347
2.2 Connections with Scattering Formulations	357
2.3 The Complex Dilated Analogue of the Titchmarsh-Weyl's Theory for a Set of Coupled Singular Second-Order Differential Equations ...	359
3. Application to a Model of a Diatomic Curve Crossing of the $X^2\Sigma^+ - B'^2\Sigma^+$ States in the MgH Radical	362
4. Possible Applications to Photofragment Spectroscopy	371
5. Summary and Conclusions	374
Acknowledgements	376
Appendix: Adiabatic and Diabatic States of a Diatomic Molecule	376

ON THE WAY TO A MULTICONFIGURATION TREATMENT OF RESONANCE PHENOMENA IN ATOMS

Nils Elander, Christina Carlsund, Peter Krylstedt and Peter Winkler

1. Introduction	384
-----------------------	-----

1.1. Experimental Motivation	384
1.2. Theoretical Approaches to Electron-Atom Scattering Phenomena ...	387
2. Exterior Complex Dilation	390
3. Selfconsistent Complex Dilated Approach - Previous Work	392
4. Formulation of the Theory	394
4.1. Formulation of the Equations	394
4.2. A Simple Example :	
Coupling of Two Configurations - Hydrogenic Target	395
4.3. Transformation to a Set of Coupled Differential Equations	
One Step Generalized Closed-Coupling Equations	397
4.4. Iterative Generalized Closed-Coupling Equations	398
4.5. A Way of Solving the Non-local Problem	401
5. On the Exterior Complex Dilation of the Close Coupling Equations	403
5.1. A Local Energy Dependent Study	405
5.2. A Model Problem Study Using Hydrogenic Basis	414
6. Partial-Wave S-Matrix Poles and Reality - A Mittag-Leffler Expansion ..	415
7. Future Perspectives	422
7.1. On the Possibility of Pole Expansions	423
7.2. On the Applications to Electron Atom Collisions	424

RESONANT STATES IN THE MICROSCOPIC CLUSTER MODEL

András T. Kruppa

1. Introduction	433
2. The Microscopic Cluster Model	434
2.1 The Resonating-Group Model	434
2.2 The Generator-Coordinate Method	437
3. Imposition of Gamow Asymptotics	440
3.1 Realization in the Generator-Coordinate Method	440
3.1 Algebraic Version of the Resonating-Group Model	442
4. Complex Scaling in the Cluster Model	445
4.1 The Complex Scaling	445
4.2 The Cluster Model and the Complex Scaling	446
5. Resonances in ^8Be and Summary	448

A NOTE ON THE CLUSTER MODEL AND COMPLEX SCALING

<i>Erik Balslev</i>	455
---------------------------	-----

COMPLEX SCALING APPLIED TO TRAPPING OF ATOMS AND MOLECULES ON SOLID SURFACES

Nimrod Moiseyev

1. Introduction	459
2. The Complex Coordinate Method - a Brief Review	460
3. Rotationally Mediated Selective Adsorption	462
4. Trapping of Atoms at a Corrugated Surface	465
5. Complex Quasi-Probability for Atoms Trapped on Stepped Surfaces	469

ON A THEOREM FOR COMPLEX SYMMETRIC MATRICES AND ITS RELEVANCE IN THE STUDY OF DECAY PHENOMENA

Charles E. Reid and Erkki Brändas

1. Introduction	476
2. Proof of the Theorem	477
3. Conclusion	480

CREATION OF LONG RANGE ORDER IN AMORPHOUS CONDENSED SYSTEMS

Erkki Brändas and C. Aris Chatzidimitriou-Dreismann

1. Introduction	486
2. Coherent States, ODLRO and Large Eigenvalues of $\Gamma^{(2)}(g^{N^2})$	487
3. The Complex Scaling Method (CSM), Similarity (Non-Unitary) Transformations and Complex Symmetric Forms	494
3.1 The Complex Scaling Method, CSM	494
3.2 Similarity Transformations and Complex Symmetric Forms	497
4. Subdynamics in the Light of CSM	501
5. Emergence of Coherent-Dissipative Structures	504
5.1 Introductory Remarks	504
5.2 On Microscopic Irreversibility	505
5.3 Spontaneous Creation of Coherent-Dissipative Structures in Amorphous Condensed Systems: Formal Derivations	507
5.3.A Jordan Blocks and the Reid-Brändas Corollary	507
5.3.B On the Second Order Density Matrix	508
5.3.C Density Matrix of the Canonical Ensemble and Complex Scaling	509

5.3.D Coherent-Dissipative Structures on the Microscopic Level of Description	512
5.4 Spontaneous Creation of Coherent-Dissipative Structures	
Further Derivations and Physical Discussion	514
5.4.A Spectroscopic Transitions and the Basis Set S	514
5.4.B On Fermionic Degrees of Freedom, and the Units $ i, i + s\rangle$	515
5.4.C On the Spectral Resolution and the Degeneracy Condition $E_k = E$	516
5.4.D On Geminals of Extreme Type	516
5.4.E On the Finite Rank of $\Gamma^{(2)}$ and the Associated Dissipative Phenomena	517
5.4.F Minimal Size of the Coherent-Dissipative Structures Derivation and Physical Interpretation	517
5.4.G Further Remarks on the Physical Interpretation of the Formalism	520
6. Applications to Condensed Matter Spectroscopy	522
6.1 On the Far-Infrared Absorption in Liquids	523
6.1.A Anomalous Temperature Dependence of FIR Absorption Bands in Liquids	523
6.1.B Coherent-Dissipative Structures and FIR Absorption	525
6.1.C Supplementary Remarks	529
6.2 On the Steady-State Photoemission	531
6.2.A D-Fluctuations in the Luminescence	531
6.2.B Coherent-Dissipative Structures and D-Fluctuations in the Luminescence of Condensed Systems	533

THE LERTORPET SYMPOSIUM VIEW ON A GENERALIZED INNER PRODUCT

Edited by Nils Elander and Erkki Brändas

1. Introduction	541
2. Tore Berggren : The Regularization Method I	542
3. Borbála Gyarmati and Tamás Vertse : The Regularization Method II ...	544
4. Erkki Brändas and Nils Elander : The Complex Scaling Method and the Turn Over Rule	546
5. Nimrod Moiseyev : The C-Product	549
6. Summary	551

SUBJECT INDEX	553
