Foreword *xvii*

Preface and Philosophy *xix*

About the Companion Website *xxiii*

1	Fundamental Particles, Fundamental Forces, and Mathematical Tools	1
1.0	Introduction	1
1.1	Fundamental Forces, Elementary Particles, Nuclei, and Atoms	2
1.2	Force One: Gravitation	16
1.3	Force Three: Weak Force	17
1.4	Force Four: Strong Force	17
1.5	Review of Mathematical Concepts	24
1.5.1	Mathematics and Statistics	24
1.5.2	Functions, Equations, and Functionals	24
1.5.3	Quadratic, Cubic, and Quartic Equations	24
1.5.4	Partial Derivatives	27
1.5.5	Jacobians	30
1.5.6	Line integral	30
1.5.7	The Gauss–Green–Stokes Theorem	30
1.5.8	Techniques of integration	31
1.5.9	Differential Forms	33
1.5.10	Infinite Series	33
1.5.11	Sum and Integral Killers: The Kronecker Delta and the Dirac Delta Function	34
1.5.12	Ordinary Differential Equations (ODEs)	35
1.5.13	The Lagrange Method of Undetermined Multipliers	37
1.5.14	Partial Differential Equations (PDEs)	38
1.6	Mechanics, Vectors, Tensors, and Determinants	39
1.6.1	Forces and Linear Momentum	39
1.6.2	Dimensional Analysis	39
1.6.3	Unit Systems	39
1.6.4	Vectors	41
1.6.5	Determinants	42
1.6.6	Matrices	44
1.6.7	Tensors	45
1.6.8	Similarity Transformations	45
1.6.9	Eigenvalue-Eigenvector Problem	46
1.6.10	Planar Rotations	47
1.6.11	Eulerian Rotations	48
1.6.12	Covariant and Contravariant Vectors and Tensors	49
1.6.13	Covariant	49
1.6.14	Moment of Inertia and Angular Momentum	50
1.6.15	Derivative Operators: “Ski Slopes,” “Hernias,” and “Curls”	51
1.6.16	Gradient	52

1.6.17	Divergence	52
1.6.18	Curl	52
1.6.19	Gauss–Green–Stokes Theorem	53
1.6.20	Combinatorics	54
1.7	Hooke’s Law, One-dimensional Chain, Dispersion Relations, and Stress–Strain Tensors	55
1.7.1	Longitudinal Mechanical Waves Subjected to Hooke’s Law	57
1.7.2	Longitudinal Elastic Waves in a 1D Array of Equal Masses and Springs	57
1.7.3	One-dimensional Chain with Two Kinds of Atoms: A Band Gap Appears	59
1.7.4	Stress and Strain Tensors	61
1.8	Lagrange’s Function and Hamilton’s Function	62
1.9	Force Two: Electromagnetism	63
1.9.1	Coulomb’s Law and Ampère’s Law	63
1.9.2	Material Media and Their Reaction to External Fields	65
1.9.3	Maxwell’s Equations	66
1.9.4	Scalar and Vector Potentials	70
1.9.5	Polarization of Electromagnetic Waves	71
1.9.6	Multipoles	72
1.9.7	Electric Dipole Moments	73
1.9.8	Electric Multipole Moments, Polarizabilities and Hyperpolarizabilities	73
1.10	The Size of Fundamental Particles and the Physical Meaning of Quantum Numbers	74
1.11	Special Relativity	75
1.12	Feynman Diagrams	79
1.13	General Relativity, Gravity as a Curvature of Space-Time and the Size of the Universe	80
1.14	Elements of Optics	83
1.14.1	Jones Vector	88
1.14.2	Anisotropic Indices of Refraction	88
1.14.3	Mirrors	89
1.14.4	Prisms and Gratings	92
1.15	Transforms	94
1.15.1	Convolution Theorem	97
1.15.2	Laplace Transforms	98
1.15.3	Wavelet Transform	100
1.16	Contour Integration and Kramers–Kronig Relations	100
1.17	Error Analysis	102
1.17.1	Errors	102
1.17.2	Propagation of Errors	102
1.17.3	Gaussian Normal Error Probability Function	103
1.17.4	Binomial Distribution	104
1.17.5	Poisson Distribution	104
1.17.6	Least Squares or Linear Regression Analysis	104
1.18	Statistics	105
1.19	General References	107
	References	137
	End-of-Chapter Problems	138
2	Quantum Mechanics	147
2.0	Introduction	147
2.1	Quantum Postulates	147
2.1.1	Bras, Kets, and Hermitian Operators	151
2.2	Quantum Mechanics of the Free Electron	154
2.3	The Particle in a Box	155
2.3.1	Tunneling or Barrier Penetration or Scattering in One Dimension	157
2.3.2	Radioactive Decay	160

2.3.3	Gamow Calculation	161
2.4	The Harmonic Oscillator	162
2.5	The Hamiltonian for the One-electron Atom in a Central Field	165
2.6	The Rigid Rotor	173
2.7	The Hamiltonian and Eigenfunctions for the N-electron Atom or Molecule	174
2.8	Space Quantization: the Allowed Orientations of Orbital and Spin Angular Momenta	175
2.9	Aufbau for Atoms	176
2.10	Lewis Octets	177
2.11	Promotion and Hybridization of Atomic Orbitals	177
2.12	Bonding in Hydrogen Molecule: Valence Bond vs. Molecular Orbital and Variational Approaches	178
2.13	Aufbau for Molecules: σ and π Bonding	179
2.14	Perturbation Theory	182
2.15	The Hartree–Fock Method	184
2.16	The Roothaan–Hall Matrix Formulation of the Hartree–Fock Problem	185
2.17	Implementation of the Hartree–Fock Method	189
2.18	Configuration Interaction	190
2.19	Density Functional Theory (DFT)	191
2.20	Molecular Mechanics	194
2.21	The Hückel Problem, or “Simple” Hückel Molecular Orbital Theory (SHMO)	194
2.22	Extended Hückel Theory	199
2.23	Pariser–Parr–Pople Theory	199
2.24	Neglect of Differential Overlap (NDO) Methods	200
2.25	Magnetic Moments, Landé g-factor, Larmor Precession, Spin–Orbit Coupling, and Thomas Precession	204
2.25.1	Larmor Precession	206
2.25.2	The $g = 2$ Puzzle, Stated	208
2.25.3	Spin–Orbit Interaction	208
2.25.4	The $g = 2$ Puzzle Solved: Thomas Precession	209
2.26	More Terms of the Hamiltonian Operator for a Many-Electron Atom or Molecule	211
2.27	“Van der Waals” Interactions in Molecules	214
2.28	Atomic Structure: LS (Russell–Saunders) vs. jj Coupling	216
2.29	Molecular Spectroscopy	219
2.30	Einstein A and B Coefficients	223
2.31	Absorption of Light: Beer–Bouguer–Lambert Law, or Beer’s Law	225
2.32	Time-Dependent Perturbation Theory: The Rabi Formula	227
2.33	Fermi’s Golden Rule	229
2.34	Photon–Molecule Interaction – The Hamiltonian	232
2.35	Transition Moments and Einstein Coefficients	235
2.35.1	Oscillator Strength	236
2.36	Quantum Electrodynamics	236
2.37	General Radiative Transitions	237
2.38	Static vs. Resonant Detection	239
2.39	Static Electric–Dipole Selection Rules for the One-Electron Atom	239
2.40	Static Electric–Dipole Selection Rules for the Harmonic Oscillator	240
2.41	Lifetimes from Resonance Lineshapes	241
2.42	Light Scattering	241
	References	271
	End-of-Chapter Problems	273
3	Thermodynamics	277
3.0	Review of Thermodynamics	277
3.1	The Three (Plus One) Laws of Thermodynamics	277
3.1.1	Zeroth Law of Thermodynamics (Transitivity)	277
3.1.2	First Law of Thermodynamics (Conservation of Energy – “You Can’t Win”)	277

3.1.3	Second Law of Thermodynamics (“You Cannot Even Break Even”) 278
3.1.4	Third Law of Thermodynamics 278
3.2	Useful Auxiliary Functions: Enthalpy, Helmholtz Free Energy, and Gibbs Free Energy 279
3.3	Perfect Differentials (Two-Forms) 279
3.4	Useful Measurables: Thermal Expansivity, Heat Capacity, Joule–Thomson and Isothermal Thompson Coefficients, and the Chemical Potential 281
3.5	Gibbs Phase Rule 283
3.6	Crystalline and Amorphous Solids 284
3.7	Liquids 284
3.8	Perfect Gas Law, the <i>PVT</i> Surface, the van der Waals Equation and Virial Equations 285
3.9	Arrhenius Assumption 290
3.10	More About Gases: Maxwell–Boltzmann Distribution, Collision Frequency, Mean Free Path, and Gaseous Effusion 291
3.11	More About Liquids 292
3.11.1	Osmosis 293
3.11.2	Superfluid 294
3.12	More About Solids 294
3.12.1	Magnetic Solids 294
3.12.2	Electrets 295
3.13	Liquid Crystals 295
3.14	Two-component Liquid–Vapor Phase Diagrams 295
3.15	Two-component Solid–Liquid Phase Diagrams for Solid–Liquid Equilibria 298
3.16	The Chemical Potential, Ideal Solutions, and Colligative Properties 298
3.16.1	Freezing-Temperature Depression 299
3.17	Two-Dimensional Version of the Perfect Gas Law 300
3.17.1	Micelles and Liposomes 304
3.18	Contact Angle and Surface Tension Measurements 306
3.19	Adiabatic and Diathermal Walls and Fixed-Temperature Baths 308
3.20	Thermodynamic Efficiency: The Carnot, Otto, Diesel, and Rankine Cycles 308
3.21	International Standards for Time, Mass, Length, Temperature, and Brightness 310
3.22	Standard States and Enthalpies and Gibbs Free Energies of Formation 311
3.23	Bond Enthalpies 313
3.24	Electronegativity 318
3.25	Reaching for High and Low Temperatures 320
3.26	Attainment of High and Low Pressures 321
	References 321
	End-of-Chapter Problems 322
4	Statistical Mechanics 327
4.0	Introduction 327
4.1	Replicas and Ensembles, Fermions, Bosons, and Boltzons 328
4.1.1	Fermion Postulate 329
4.1.2	Boson Postulate 329
4.1.3	Boltzon Postulate 329
4.2	CB, FD, and BE Distributions, and the Microcanonical Ensemble 330
4.2.1	Maximum Probability 331
4.3	Canonical, Grand Canonical, Isothermal-Isobaric, and Generalized Ensembles 333
4.4	Links Between the Partition Functions and Some Thermodynamic Functions 338
4.5	Heat Capacities 338
4.5.1	Translation 339
4.5.2	Rotation 339
4.5.3	Nuclear Spin Effects on Rotation 340
4.5.4	Vibration 341

4.5.5	Electronic Excitation	341
4.5.6	Einstein and Debye Theories of the Low-temperature Heat Capacity of Solids [4.2]	342
4.5.7	Debye Theory of the Heat Capacity of Solids	342
4.6	Black-Box Radiation, and the Birth of Quantum Mechanics	343
4.7	Electronic Heat Capacity: Drude vs. Fermi–Dirac	346
4.8	Magnetic Susceptibilities	349
4.8.1	General Phenomenology	349
4.8.2	Dilute Ensemble of Paramagnetic Ions	350
4.8.3	Diamagnetism	352
4.8.4	Ferromagnetism	355
4.9	Electric Susceptibilities	356
4.10	Universal Theory of Critical Phenomena	360
	References	360
	End-of-Chapter Problems	361

5 Kinetics, Equilibria, and Electrochemistry 363

5.0	Introduction	363
5.1	Energetics, Reaction Coordinate, Transition States, Intermediates, and Catalysis	363
5.2	Classification of Reaction Types	367
5.3	First-Order and Unimolecular Reactions	368
5.3.1	Carbon-14 Dating	368
5.4	Second-Order (Unmixed) and Unmixed Bimolecular Reactions	369
5.5	Second-Order (Mixed) and Mixed Bimolecular Reactions	369
5.6	Third-Order (Unmixed) and Unmixed Termolecular Reactions	370
5.7	Reversible Reactions	370
5.8	Consecutive Reactions	371
5.9	The Steady-State Approximation and the Rate-Determining Step	372
5.10	Approximation Methods: the Michaelis–Menten Equation	372
5.11	Chain Reactions. The Reaction of Hydrogen and Bromine at High Temperature	375
5.12	Using Laplace Transforms to Solve Kinetics Equations	377
5.13	Reaction Rate Theories and Energy Surfaces	378
5.14	Marcus Theory of Electron Transfer	380
5.15	Equilibria in Aqueous Solution: pH	383
5.16	Equilibria in Nonaqueous Solvents	391
5.17	Lewis Acids and Lewis Bases	392
5.18	Electrochemistry: Electrode Potentials and the Nernst Equation	393
5.19	Gouy–Chapman Double-Layer Theory	405
5.20	Nernst–Planck and Cottrell Equations	406
	Further Reading	409
	References	409
	End-of-Chapter Problems	410

6 Symmetry 411

6.0	Symmetry	411
6.1	Symmetry in Crystals	411
6.2	Symmetry Operations and Point Groups	412
6.3	Group Theory and Character Tables	418
6.4	Bravais Lattices	427
6.5	The 32 Crystallographic Point Groups	432
6.6	The 17 Plane Groups	433
6.7	The 230 Crystallographic Space Groups	434
6.8	Listing of Elements, Simple Compounds, and Their Crystal Structures	443
6.9	The Wigner–Seitz Cell	455

6.10	Reciprocal Lattice	456
6.11	Symmetry of 2D Surfaces	458
6.12	Descent of Symmetry	459
6.13	Covariant and Contravariant Transformations	459
6.13.1	Covariant	459
6.13.2	Contravariant	460
6.13.3	Four by Four	461
6.13.4	Generation of 230 Space Groups Using 4 by 4 Matrices	462
6.14	Example of Descent of Symmetry: VO ₂	462
	References	466
7	Solid State Physics	469
