

Contents

0. Preliminaries	1
0.0 Historical Introduction	1
0.1 Minkowski Space and the Lorentz Group	6
0.2 Tensors in Minkowski Space	11
0.3 Some Topics of Scattering Theory	14
0.4 Problems	19
1. Relativistic Quantum Mechanics	21
1.1 Spinor Representations of the Lorentz Group	21
1.2 Invariant Field Equations	26
1.3 Algebraic Properties of the Dirac Equation	32
1.4 Discussion of the Free Dirac Equation	36
1.5 Gauge Invariance and Electromagnetic Fields	44
1.6 The Hydrogen Atom	54
1.7 Problems	62
2. Field Quantization	66
2.1 Second Quantization in Fock Space	67
2.2 Quantization of the Dirac Field	78
2.3 Discussion of the Commutation Functions	87
2.4 The Scattering Operator (S-Matrix) in Fock Space	93
2.5 Perturbation Theory	105
2.6 Electron Scattering	111
2.7 Pair Production	118
2.8 The Causal Phase of the S-Matrix	124
2.9 Non-Perturbative Construction of the Causal Phase	134
2.10 Vacuum Polarization	141
2.11 Quantization of the Radiation Field	146
2.12 Problems	156
3. Causal Perturbation Theory	159
3.1 The Method of Epstein and Glaser	160
3.2 Splitting of Causal Distributions	170
3.3 Application to QED	183
3.4 Electron Scattering (Moeller Scattering)	186
3.5 Electron-Photon Scattering (Compton Scattering)	195

3.6	Vacuum Polarization	202
3.7	Self-Energy	208
3.8	Vertex Function: Causal Distribution	214
3.9	Vertex Function: Retarded Distribution	228
3.10	Form Factors	236
3.11	Adiabatic Limit	239
3.12	Charged Particles in Perturbative QED	248
3.13	Charge Normalization	258
3.14	Problems	261
4.	Properties of the S-Matrix	263
4.1	Vacuum Graphs	263
4.2	Operator Character of the S-Matrix	268
4.3	Normalizability of QED	271
4.4	Discrete Symmetries	275
4.5	Poincaré Covariance	282
4.6	Gauge Invariance and Ward Identities	289
4.7	Unitarity	300
4.8	Renormalization Group	308
4.9	Interacting Fields and Operator Products	314
4.10	Field Equations	323
4.11	Problems	333
5.	Other Electromagnetic Couplings	335
5.1	Scalar QED: Basic Properties	335
5.2	Scalar QED: Gauge Invariance	344
5.3	Axial Anomalies	351
5.4	(2+1)-Dimensional QED: Vacuum Polarization	362
5.5	(2+1)-Dimensional QED: Mass Generation	368
5.6	Problems	375
6.	Epilogue: Non-Abelian Gauge Theories	376
Appendices		
A:	The Hydrogen Atom According to the Schrödinger Equation	381
B:	Regularly Varying Functions	384
C:	Spence Functions	390
D:	Grassmann Test Functions	392
Bibliographical Notes		397
