

Contents

Notation and basic inequalities	11
1 Preliminaries	15
1.1 Mollifiers	15
1.2 Weak derivatives	18
1.3 Sobolev spaces (basic properties)	28
2 Approximation by infinitely differentiable functions	39
2.1 Approximation by C_0^∞ -functions on R^n	39
2.2 Nonlinear mollifiers with variable step	42
2.3 Approximation by C^∞ -functions on open sets	47
2.4 Approximation with preservation of boundary values	56
2.5 Linear mollifiers with variable step	60
2.6 The best possible approximation with preservation of boundary values	73
3 Sobolev's integral representation	81
3.1 The one-dimensional case	81
3.2 Star-shaped sets and sets satisfying the cone condition	92
3.3 Multidimensional Taylor's formula	100
3.4 Sobolev's integral representation	104
3.5 Corollaries	111
4 Embedding theorems	119
4.1 Embeddings and inequalities	119
4.2 The one-dimensional case	127
4.3 Open sets with quasi-resolvable, quasi-continuous, smooth and Lipschitz boundaries	148
4.4 Estimates for intermediate derivatives	160
4.5 Hardy-Littlewood-Sobolev inequality for integral of potential type	177

4.6	Embeddings into the space of continuous functions	181
4.7	Embeddings into the space L_q	186
5	Trace theorems	197
5.1	Notion of the trace of a function	197
5.2	Existence of the traces on subspaces	201
5.3	Nikol'skiĭ-Besov spaces	202
5.4	Description of the traces on subspaces	214
5.5	Traces on smooth surfaces	238
6	Extension theorems	247
6.1	The one-dimensional case	247
6.2	Pasting local extensions	264
6.3	Extensions for sufficiently smooth boundaries	269
6.4	Extensions for Lipschitz boundaries	271
7	Comments	289
	Bibliography	296
	Index	311
