|                                                                  |     |
|------------------------------------------------------------------|-----|
| <b>Introduction</b>                                              |     |
| H. Atmanspacher and G.J. Dalenoort .....                         | 1   |
| <hr/>                                                            |     |
| <b>1. General Aspects</b>                                        |     |
| <hr/>                                                            |     |
| <b>Objectification as an Endo-Exo Transition</b>                 |     |
| H. Atmanspacher .....                                            | 15  |
| <b>Action Principles and Teleology</b>                           |     |
| M. Stöltzner .....                                               | 33  |
| <b>Internal Time and Temporality</b>                             |     |
| G. Franck .....                                                  | 63  |
| <b>Biological Evolution as a Process Viewed Internally</b>       |     |
| G. Kampis .....                                                  | 85  |
| <b>Internal and External Representations of Mental Processes</b> |     |
| G.J. Dalenoort and P.H. de Vries .....                           | 111 |
| <b>What Can We Learn From Internal Observers?</b>                |     |
| D. Gernert .....                                                 | 121 |
| <b>The Image and the Picture of Ecology</b>                      |     |
| C. Thomas .....                                                  | 135 |
| <hr/>                                                            |     |
| <b>2. The Perspective of Theoretical Physics</b>                 |     |
| <hr/>                                                            |     |
| <b>Endophysics – Descartes Taken Seriously</b>                   |     |
| O.E. Röessler .....                                              | 153 |
| <b>Endo- and Exo-Theories of Matter</b>                          |     |
| H. Primas .....                                                  | 163 |
| <b>Temporal Bell Inequalities:</b>                               |     |
| <b>A Journey to the Limits of “Consistent Histories”</b>         |     |
| G. Mahler .....                                                  | 195 |

|                                                                                                     |     |
|-----------------------------------------------------------------------------------------------------|-----|
| <b>Entropy and Evolution</b>                                                                        |     |
| J.D. Becker .....                                                                                   | 207 |
| <b>General Remarks on Complexity</b>                                                                |     |
| J. Kurths, A. Witt, H. Atmanspacher, F. Feudel, H. Scheingraber,<br>and R. Wackerbauer .....        | 219 |
| <b>Observing Complexity and the Complexity of Observation</b>                                       |     |
| J.P. Crutchfield .....                                                                              | 235 |
| <b>Extrinsic-Intrinsic Concept and Complementarity</b>                                              |     |
| K. Svozil .....                                                                                     | 273 |
| <hr/>                                                                                               |     |
| <b>3. The Perspective of Cognitive Science</b>                                                      |     |
| <hr/>                                                                                               |     |
| <b>Time – A Hidden Window to Dynamics</b>                                                           |     |
| E. Ruhnau .....                                                                                     | 291 |
| <b>Sensory Perceptions and the Endo-Exo Interface:<br/>Towards a Physics of Cognitive Processes</b> |     |
| M. Euler .....                                                                                      | 309 |
| <b>Circular Causality and the Human Self-Organized<br/>Endo-Exo Interface</b>                       |     |
| J.S. Wassenaar .....                                                                                | 331 |
| <b>Epistemological Considerations of Neural Representations<br/>of Languages</b>                    |     |
| P.H. de Vries and G.J. Dalenoort .....                                                              | 347 |
| <b>Semantic Pressure, Hyper-Systems, and Feelings</b>                                               |     |
| H.M. Emrich .....                                                                                   | 359 |
| <b>Wigner’s Friend Revitalized?</b>                                                                 |     |
| W. von Lucadou .....                                                                                | 369 |
| <b>The Mental System – A Mathematical/Physical Approach</b>                                         |     |
| R. Olivier .....                                                                                    | 389 |
| <b>Index</b> .....                                                                                  | 407 |
