## Colour Vision and Shading

|                                                                                                        |    |
|--------------------------------------------------------------------------------------------------------|----|
| Colour constancy for scenes with varying illumination .....                                            | 3  |
| <i>K. Barnard, G. Finlayson, B. Funt</i>                                                               |    |
| Color angular indexing .....                                                                           | 16 |
| <i>G.D. Finlayson, S.S. Chatterjee, B.V. Funt</i>                                                      |    |
| Bidirectional reflection distribution function expressed in terms of<br>surface scattering modes ..... | 28 |
| <i>J.J. Koenderink, A.J. van Doorn, M. Stavrdis</i>                                                    |    |
| Generalizing Lambert's Law for smooth surfaces .....                                                   | 40 |
| <i>L.B. Wolff</i>                                                                                      |    |

## Image Features

|                                                                  |    |
|------------------------------------------------------------------|----|
| Local scale control for edge detection and blur estimation ..... | 57 |
| <i>J.H. Elder, S.W. Zucker</i>                                   |    |
| Regularization, scale-space, and edge detection filters .....    | 70 |
| <i>M. Nielsen, L. Florack, R. Deriche</i>                        |    |
| Direct differential range estimation using optical masks .....   | 82 |
| <i>E.P. Simoncelli, H. Farid</i>                                 |    |

## Motion

|                                                                                              |     |
|----------------------------------------------------------------------------------------------|-----|
| Generalised epipolar constraints .....                                                       | 97  |
| <i>K. Åström, R. Cipolla, P.J. Giblin</i>                                                    |     |
| Object models from contour sequences .....                                                   | 109 |
| <i>E. Boyer</i>                                                                              |     |
| Directions of motion fields are hardly ever ambiguous .....                                  | 119 |
| <i>T. Brodsky, C. Fermüller, Y. Aloimonos</i>                                                |     |
| Euclidean reconstruction: from paraperspective to perspective .....                          | 129 |
| <i>S. Christy, R. Horaud</i>                                                                 |     |
| Optical flow and phase portrait methods for environmental satellite<br>image sequences ..... | 141 |
| <i>I. Cohen, I. Herlin</i>                                                                   |     |

|                                                                                                  |     |
|--------------------------------------------------------------------------------------------------|-----|
| Refinement of optical flow estimation and detection of motion edges .....                        | 151 |
| <i>A. Giachetti, V. Torre</i>                                                                    |     |
| Reliable extraction of the camera motion using constraints on<br>the epipole .....               | 161 |
| <i>J.M. Lawn, R. Cipolla</i>                                                                     |     |
| Accuracy vs. efficiency trade-offs in optical flow algorithms .....                              | 174 |
| <i>H. Liu, T.-H. Hong, M. Herman, R. Chellappa</i>                                               |     |
| Rigorous bounds for two-frame structure from motion .....                                        | 184 |
| <i>J. Oliensis</i>                                                                               |     |
| The rank 4 Constraint in multiple ( $\geq 3$ ) view geometry .....                               | 196 |
| <i>A. Shashua, S. Avidan</i>                                                                     |     |
| Using singular displacements for uncalibrated monocular<br>visual systems .....                  | 207 |
| <i>T. Viéville, D. Lingrand</i>                                                                  |     |
| Duality of multi-point and multi-frame geometry:<br>fundamental shape matrices and tensors ..... | 217 |
| <i>D. Weinshall, M. Werman, A. Shashua</i>                                                       |     |
| On the appropriateness of camera models .....                                                    | 228 |
| <i>C. Wiles, J.M. Brady</i>                                                                      |     |
| Ground plane motion camera models .....                                                          | 238 |
| <i>C. Wiles, J.M. Brady</i>                                                                      |     |

## Medical Applications

|                                                                                                  |     |
|--------------------------------------------------------------------------------------------------|-----|
| Snakes and splines for tracking non-rigid heart motion .....                                     | 251 |
| <i>A.A. Amini, R.W. Curwen, J.C. Gore</i>                                                        |     |
| Local quantitative measurements for cardiac motion analysis .....                                | 262 |
| <i>S. Benayoun, D. Kharitonsky, A. Zilberman, S. Peleg</i>                                       |     |
| Application of model based image interpretation methods to diabetic<br>neuropathy .....          | 272 |
| <i>M.J. Byrne, J. Graham</i>                                                                     |     |
| Global alignment of MR images using a scale based hierarchical model ...                         | 283 |
| <i>S. Fletcher, A. Bulpitt, D.C. Hogg</i>                                                        |     |
| Reconstruction of blood vessel networks from X-ray projections and a<br>vascular catalogue ..... | 293 |
| <i>P. Hall, M. Ngan, P. Andreae</i>                                                              |     |

## Tracking (2)

- Combining multiple motion estimates for vehicle tracking ..... 307  
*S. Gil, R. Milanese, T. Pun*
- Visual surveillance monitoring and watching ..... 321  
*R. Howarth, H. Buxton*
- A robust active contour model for natural scene contour extraction  
 with automatic thresholding ..... 335  
*K.P. Ngoi, J. Jia*
- A maximum-likelihood approach to visual event classification ..... 347  
*J.M. Siskind, Q. Morris*

## Applications and Recognition

- Measures for silhouettes resemblance and representative silhouettes  
 of curved objects ..... 363  
*Y. Gdalyahu, D. Weinshall*
- Real-time lip tracking for audio-visual speech recognition applications .... 376  
*R. Kaucic, B. Dalton, A. Blake*
- Matching object models to segments from an optical flow field ..... 388  
*H. Kollnig, H.-H. Nagel*
- Quantification of articular cartilage from MR images using active  
 shape models ..... 400  
*S. Solloway, C.J. Taylor, C.E. Hutchinson, J.C. Waterton*

## Calibration/Focus/Optics

- Direct methods for self-calibration of a moving stereo head ..... 415  
*M.J. Brooks, L. de Agapito, D.Q. Huynh, L. Baumela*
- Dense reconstruction by zooming ..... 427  
*C. Delherm, J.M. Lavest, M. Dhome, J.T. Lapresté*
- Telecentric optics for computational vision ..... 439  
*M. Watanabe, S.K. Nayar*

## Tracking (3)

- Recognition, pose and tracking of modelled polyhedral objects by  
 multi-ocular vision ..... 455  
*P. Braud, J.-T. Lapresté, M. Dhome*

|                                                                                               |     |
|-----------------------------------------------------------------------------------------------|-----|
| Locating objects of varying shape using statistical feature detectors .....                   | 465 |
| <i>T.F. Cootes, C.J. Taylor</i>                                                               |     |
| Generation of semantic regions from image sequences .....                                     | 475 |
| <i>J.H. Fernyhough, A.G. Cohn, D.C. Hogg</i>                                                  |     |
| Tracking of occluded vehicles in traffic scenes .....                                         | 485 |
| <i>T. Frank, M. Haag, H. Kollnig, H.-H. Nagel</i>                                             |     |
| Imposing hard constraints on soft snakes .....                                                | 495 |
| <i>P. Fua, C. Brechbühler</i>                                                                 |     |
| X vision: combining image warping and geometric constraints for fast<br>visual tracking ..... | 507 |
| <i>G.D. Hager, K. Toyama</i>                                                                  |     |
| Human body tracking by monocular vision .....                                                 | 518 |
| <i>F. Lerasle, G. Rives, M. Dhome, A. Yassine</i>                                             |     |
| Computational perception of scene dynamics .....                                              | 528 |
| <i>R. Mann, A.D. Jepson, J.M. Siskind</i>                                                     |     |
| A filter for visual tracking based on a stochastic model for<br>driver behaviour .....        | 540 |
| <i>S.J. Maybank, A.D. Worrall, G.D. Sullivan</i>                                              |     |
| Elastically adaptive deformable models .....                                                  | 550 |
| <i>D. Metaxas, I.A. Kakadiaris</i>                                                            |     |
| Statistical feature modelling for active contours .....                                       | 560 |
| <i>S. Rowe, A. Blake</i>                                                                      |     |
| <b>Applications</b>                                                                           |     |
| Motion deblurring and super-resolution from an image sequence .....                           | 573 |
| <i>B. Bascle, A. Blake, A. Zisserman</i>                                                      |     |
| Uncalibrated visual tasks via linear interaction .....                                        | 583 |
| <i>C. Colombo, J.L. Crowley</i>                                                               |     |
| Finding naked people .....                                                                    | 593 |
| <i>M.M. Fleck, D.A. Forsyth, C. Bregler</i>                                                   |     |
| Acquiring visual-motor models for precision manipulation with<br>robot hands .....            | 603 |
| <i>M. Jägersand, O. Fuentes, R. Nelson</i>                                                    |     |

|                                                                                                                          |     |
|--------------------------------------------------------------------------------------------------------------------------|-----|
| A system for reconstruction of missing data in image sequences using<br>sampled 3D AR models and MRF motion priors ..... | 613 |
| <i>A.C. Kokaram, S.J. Godsill</i>                                                                                        |     |
| Elimination of specular surface-reflectance using polarized and<br>unpolarized light .....                               | 625 |
| <i>V. Müller</i>                                                                                                         |     |
| Separating real and virtual objects from their overlapping images .....                                                  | 636 |
| <i>N. Ohnishi, K. Kumaki, T. Yamamura, T. Tanaka</i>                                                                     |     |
| Goal-directed video metrology .....                                                                                      | 647 |
| <i>I. Reid, A. Zisserman</i>                                                                                             |     |
| Reconstructing polyhedral models of architectural scenes from<br>photographs .....                                       | 659 |
| <i>C.J. Taylor, P.E. Debevec, J. Malik</i>                                                                               |     |
| <b>Structure from Motion (3)</b>                                                                                         |     |
| Algebraic varieties in multiple view geometry .....                                                                      | 671 |
| <i>A. Heyden, K. Åström</i>                                                                                              |     |
| 3D model acquisition from extended image sequences .....                                                                 | 683 |
| <i>P. Beardsley, P. Torr, A. Zisserman</i>                                                                               |     |
| Computing structure and motion of general 3D curves from<br>monocular sequences of perspective images .....              | 696 |
| <i>T. Papadopoulo, O. Faugeras</i>                                                                                       |     |
| A factorization based algorithm for multi-image projective structure<br>and motion .....                                 | 709 |
| <i>P. Sturm, B. Triggs</i>                                                                                               |     |
| <b>Author Index</b> .....                                                                                                | 721 |
