

CONTENTS

Chapter 1. Vision and Intelligence	1
1.1 Vision and Intelligence	1
1.2 Machine Vision Systems for Industry	3
1.3 Technologies and Techniques	6
1.4 Prolog	9
1.5 Image Processing	10
1.6 Outline of this Monograph	12
Chapter 2. Fundamentals of Prolog+	15
2.1 Basic Principles of Digital Image Processing	15
Digital Representations of Images	16
Monochrome (Grey-Scale) Images	17
Binary Images	19
Colour and Multi-Spectral Images	19
Stereoscopic Image Pairs	20
Moving Images	20
Image Processing Functions	21
Notation	23
Monadic Point-by-Point Operators	24
Dyadic Point-by-Point Operators	26
Local Operators	27
Linear Local Operators	27
Non-Linear Local Operators	30
Using Direction Codes	32
N-tuple Operators	32
Morphological Operators	33
Edge Effects	33
Global Image Transforms	34
Magnification and Aspect Adjustment	37
Axis Conversion	37
Warping	37
Intensity Histogram	38
Binary Images	40
Measurements on Binary Images	48
Commentary	51

XIV CONTENTS

2.2	Introducing Prolog+	51
2.3	Review of Prolog	54
	Sample Prolog Program	55
	Sample Queries	58
2.4	Sample Prolog+ Programs	60
	Commentary	61
	Another Program and Some Further Comments	63
2.5	The Declarative Nature of Prolog+	65
	Defining New Names for Image Processing Operators ...	65
	Redefining Default Values for Arguments	65
	Operators and Some Useful Control Facilities	66
	Recognising Bakewell Tarts	68
	Recognising Printed Letters	70
2.6	Controlling External Devices	72
	Controlling Lights	72
	Operating an (X,Y, θ)-table	73
	Pick-and-Place Arm	74
	Controlling the Camera and Lens	75
	Auxiliary I/O Functions	75
	Chapter 3. Operating Environment	77
3.1	Pull-Down Menus	77
	Utility Menu	79
	Process Menu	80
	Analyse Menu	82
	Lights Menu	82
	Device Menu	83
	Applications Menu	83
3.2	Command Keys	85
3.3	Transparent (or Interactive) Mode	85
3.4	The @ Operator	86
3.5	Very Simple Prolog+	87
3.6	The # Operator	88
3.7	Device Control in VSP	90
3.8	Pull-Down Menus in VSP	90
3.9	Speech Synthesis	91
3.10	The VSP Software and Other Implementations	93
	Software	93
	Hardware	94
	Concurrent Processing	97
3.11	Adding Other AI Facilities	97
3.12	Summary	98
	Chapter 4. Extending the Language	101
4.1	The Library	101
4.2	Self Documentation of the Library	102
	Finding Prolog+ Operator Classes	104

What Does Each Class Contain?	104
List All Operators Available in the Library	105
Finding "Help" Information about a Given Topic	105
4.3 Operators	106
4.4 Definite Clause Grammars	107
Robotics	109
Lighting Control	112
Valid Sentences	116
4.5 Understanding Sentences	115
Another Approach	119
Additions to the Database	121
4.6 Simple Language for Describing Pictures	122
4.7 Summary	125
Chapter 5. Analysing Vector Representations of Images	127
5.1 Introduction	127
5.2 Acquiring Data from a Graph	128
Format for Output List	130
Plotting a Tree-Like Structure	130
5.3 Low-Level Predicates	130
5.4 Identifying Simple Geometric Figures	135
5.5 Trees and Forests	136
5.6 Creating Continuous Curves from Disjoint Lines	138
Sample "Input" Database	141
Output	141
5.7 An Alternative Representation for Edges	141
5.8 Constructing Piece-Wise Linear Models of edges	143
5.9 Curve Parsing	147
5.10 Summary	148
Chapter 6. Robot and Lighting Control	151
6.1 Introduction	151
6.2 Calibration of a Robot Vision System	151
6.3 Converting Vision System Coordinates to Robot Coordinates	154
6.4 Moving the Robot	156
6.5 Additional Robot Facilities	157
6.6 Two Demonstrations	159
White Disc with Black Spot	159
Automobile Connecting Rod (Con-rod)	160
6.7 The Front Camera	162
6.8 Range Maps	164
6.9 Lighting in a Flexible Inspection Cell	169
6.10 Additional Remarks	171

Chapter 7. Further Applications	175
7.1 Introduction	175
7.2 Recognising Playing Cards	175
Identifying the Suit	176
Identifying the Value of a Non-Picture Card	177
Identifying the Value of a Picture Card	178
Additional Tasks	181
7.3 Stacking	182
Initial Description of the Blocks World	186
User Specification of the Desired (i.e. Goal) State	187
Additional Notes	187
Program Listing	188
Additional Remarks About Warplan	192
Simplified Stacking Program; an Alternative to	
Warplan	192
Program Listing	193
Sample Query	194
Database Prior to Query	194
Database After Query	194
Output Printed by “stack”	195
7.4 Packing	195
Packing Rectangles	198
Packing Complex Shapes	200
Packing Program, Partial Listing	201
Notes on the Packing Program	202
Packing Arbitrary Shapes	203
7.5 Shape Analysis	205
Shape Recognition by Parameter Matching	206
Shape Recognition by Matching Skeletons	207
Program, Partial Listing	208
Algorithm Speed	210
Checking Geometry	211
Semi-Flexible Objects	211
Overlapping Spider-Like Objects	211
Overlapping Convex Shapes	213
7.6 Maze Searching	217
Searching a Simple Maze	217
Eliminating Blind Alleys	220
Non-Simple Mazes	221
Hill Climbing	226
7.7 Automatic Dissection of Plantlets	227
Program, Partial Listing	229
Remarks	231
7.8 Optical Character Recognition	233
Recognising Playing-Card Value Symbols	234
An Extension of the “measure” Predicate	236
Moments	237

Walsh/Haar Transform	238
7.9 Learning	240
Recognition Program	241
Learning Program	243
Practical Applications of Teaching by Showing	245
Analysing Surface Texture	246
Another Classification and Learning Scheme	249
Cluster Analysis	253
Alternative Methods of Decision Making and Learning	256
7.10 In Conclusion	261
Chapter 8. Advanced Inspection Techniques	263
8.1 What is “Advanced Inspection”?	263
Model-Based Inspection	265
Rule-Based Inspection	267
8.2 Performing a Pre-Defined Sequence of Inspection Operations	267
Setting up the Database	269
8.3 Scan and Search Patterns	270
Extreme Feature Location	270
Raster Scan	272
Random Scan	272
Space-Filling Scan	272
Coarse/Fine Scan Search	275
Edge/Contour Following	276
Navigating by Landmarks	278
8.4 Gauge Predicates	278
Applications of Gauge Predicates	281
8.5 Inspecting All ... on Every ... of a	284
8.6 Rule-Based Inspection	287
8.7 Declarative Programming of Vision Systems	291
8.8 Feature Recognition	294
8.9 Program for Natural Language Declarative Programming	296
Data Window	297
Converting Normal English into List Format	298
Sample Query using “english_to_list”	299
Describing Images in List Format English	299
Recognising Objects in Images	301
Verification Stage	303
A Simple Example	305
Sub-Goal: object_recognition	305
Sub-Goal: describe_image	306
Sub-Goal: run_program	307
8.10 Extending the Idea	307
Synonyms and Antonyms	307

XVIII CONTENTS

Additional Syntax Structures	308
Additional Image Features	310
8.11 Concluding Remarks	313
Chapter 9. Multi-Processing and Other Ideas for the Future	317
9.1 Models of Multi-Processor Systems	317
9.2 Handling Interrupts in Real Time	319
Meta-Interpreter Program Listing	320
A Simple Program to Illustrate the Meta-Interpreter	322
Using the Meta-Interpreter for Real-Time Control	324
9.3 Spawning Goals	325
Spawning Goals on Interrupt	325
Process Control Functions	326
9.4 Mail Boxes	327
9.5 New Directions for Prolog	330
9.6 Communicating Sequential Prolog	331
9.7 An Epilog on Prolog	336
Appendix I. VCS Command Repertoire	339
Appendix II. Library Predicates	345
Appendix III. Very Simple Prolog+	349
Appendix IV. An Alternative Implementation	357
References and Further Reading	358
Subject Index	363
