	Page
13 Electrical Properties	1
13.1 General Remarks	1
13.2 Electrical Resistivity	2
13.2.1 Temperature Dependence	2
13.2.2 Measurements on Single Crystals	5
13.2.3 Measurements on Polycrystalline Metal	7
13.2.4 Effects of Lattice Defects	10
13.2.5 Effect of Impurities	15
13.2.6 Pressure Dependence	18
13.2.7 Size Effect and Thin Films	20
13.3 Superconductivity	21
13.3.1 Bulk Metal	21
13.3.2 Films	23
Films from Evaporation and Ion-Beam Sputtering	23
Effects of Film Thickness and Annealing	26
Effects of Impurities and Additions	32
13.4 Magnetoresistance	35
13.5 Hall Effect	40
13.6 Thermoelectric Power	44
14 Electronic Properties	48
14.1 Core Levels	48
14.2 Electron Energy Bands	49
14.2.1 Hexagonal Beryllium	49
14.2.2 Body-Centered Cubic Beryllium	52
14.3 Density of States	52
Theoretical Studies	52
Experimental Results	55
14.4 Fermi Surface. Magnetic Breakdown	57
14.5 Effective Masses	62
14.6 Electronic Charge-Density Distribution	63
Survey	63

	Page
Structure and Form Factors	63
Deformation and Valence-Electron Density Distribution	64
Bonding and Hybridization Schemes	65
Core Expansion	65
14.7 Electron Momentum Distribution. Compton Profiles	67
14.8 Surface Electronic Structure of (0001)Be	69
Surface Core Level Shift	69
Valence-Electron Surface States	70
14.9 Work Function	72
14.10 Electron-Phonon Interaction	73
14.11 Beryllium Clusters Be_n (n=2 to 73)	75
Survey	75
n=2	75
n=3	76
n=4	77
n=5	78
n=6	79
n=7	80
n=8, 9, 10	81
n=13	81
n=2 to 73 (comparisons)	83
14.12 Plasmons and Plasmon Scattering	86
14.13 X-Ray Spectra and Scattering	93
14.13.1 X-Ray Spectra	93
14.13.2 Photon Cross Section. Mass Attenuation Coefficients	97
14.13.3 X-Ray Scattering	99
14.13.4 Raman Scattering	100
14.13.5 Compton Scattering	103
15 Optical Properties. Emission and Impact Phenomena	105
15.1 Raman Effect	105
15.2 Optical Constants	105
15.3 Thermal Radiation. Emissivity	111
15.4 Particle Channeling and Channeling Radiation	111

15.5 Phonon Fluorescence Spectra	112
15.6 Laser-Plasma Interactions	113
15.7 Electron Emission	115
15.7.1 Thermionic Emission	115
15.7.2 Photoemission and Photoelectron Spectra	115
15.7.3 Field Emission	118
15.7.4 Exoelectron Emission	118
15.8 Electron Impact Phenomena	119
15.8.1 Secondary Electron Emission (SEE)	119
15.8.2 Stopping Power (Energy Loss of Electrons)	124
15.8.3 Characteristic Electron Energy Losses	126
15.8.4 Auger Spectrum	128
15.8.5 Impact-Induced Radiation	130
15.8.6 Fluorescence Yield	131
15.9 Positron Annihilation	132
15.10 Meson and Muon Capture	134
15.11 Atom and Ion Impact Phenomena	138
15.11.1 Sputtering. Secondary Ion Emission	138
15.11.2 Stopping Power (Energy Loss of Ions)	141
15.11.3 Ion-Induced Electron Emission	142
15.11.4 Impact-Induced Photon Emission	144
15.11.5 Impact-Induced Inner-Shell Ionization and Bremsstrahlung	146
15.12 Neutron Optics. Generation of Neutrons	148
16 Electrochemical Behavior	153
General References	153
16.1 Potentials	153
16.1.1 Standard Potentials in Aqueous Solutions	153
Conventions	153
General Remarks	153
The Be ^I Be Couple	154
The Be ^{II} Be Couple	154
Correlations between Standard Potentials and Other Parameters	155
Absolute Potential	155

	Page
16.1.2 Potentials in Aqueous Solutions	156
Potential – pH Diagram	156
Beryllium Ion-Selective Electrodes	157
Potential of the $\text{Be}^{2+} \text{Be}$ Couple	158
Potentials in Solutions Initially Not Containing Be Species	158
16.1.3 Potentials in Nonaqueous Solutions	162
16.1.4 Standard Potentials and Potentials in Melts	163
Pure Beryllium Halogenide Melts	163
$\text{LiF}-\text{BeF}_2$ Melts	163
$\text{BeCl}_2-\text{NaCl}$ and BeCl_2-KCl Melts	165
BeCl_2 Melts in Eutectic $\text{LiCl}-\text{KCl}$	166
BeCl_2 in $\text{NaCl}-\text{KCl}$ Melts	167
BeCl_2 in Further Chloride and Chloride–Fluoride Melts	168
Be^{2+} in Bromide and Iodide Melts	169
16.1.5 Potential of Zero Charge and Capacity	172
16.2 Ionic Conductance	174
16.3 Electrokinetic Phenomena	175
16.4 Behavior as Cathode	176
16.4.1 Beryllium Cathodes in Aqueous Solutions	176
Overvoltage of Hydrogen	176
Experimental Results	176
Reaction Mechanism and Relation of Parameters of H_2 Evolution to Other Quantities	177
Polarization Curves	179
Acid Solutions	179
Alkaline Solutions	180
Salt Solutions	182
Cathodic Deposition (Plating) on Beryllium	184
Plating Solutions	185
16.4.2 Beryllium Cathodes in Nonaqueous Solvents	187
16.4.3 Beryllium Cathodes in Melts	188
Alkali Halide Melts	188
Other Melts	190
16.5 Behavior as Anode	192
16.5.1 Beryllium Anodes in Aqueous Solutions	192
Polarization and Dissolution	192
Polarization	192
Dissolution	194
Protective Anodic Coatings	197
General Remarks	197
Formation of Anodic Coatings	197
Properties of Anodic Coatings	199
Corrosion, Electropolishing, and Machining	202

16.5.2 Beryllium Anodes in Nonaqueous Solvents	203
16.5.3 Beryllium Anodes in Melts	205
Alkali Halide Melts	205
Other Melts	206
16.6 Polarographic and Voltammetric Characteristics	207
16.6.1 Survey	207
16.6.2 Acid Aqueous Solutions	208
Solutions of Beryllium Salts	208
Solutions of Beryllium Salts with LiCl as Supporting Electrolyte	208
Solutions of Beryllium Salts with Other Supporting Electrolytes	214
16.6.3 Neutral Aqueous Solutions	218
16.6.4 Alkaline Aqueous Solutions	218
16.6.5 Aqueous Alcoholic Solutions	219
16.6.6 Influence of Be ²⁺ Ions on the Reduction Waves of Other Metal Ions	220
16.6.7 Nonaqueous Solutions of Beryllium Salts	220
16.6.8 Beryllium Salts in Molten Salt Electrolytes	227
Alkali Chloride Melts	227
Other Melts	230
16.7 Electrodeposition	231
16.7.1 Introduction	231
16.7.2 Inorganic Solvents	232
16.7.3 Organic Solvents	233
Inorganic Beryllium Compounds	233
In Ethers	233
In Other Organic Solvents	234
Organic Beryllium Compounds	236
In Ethers	236
In Other Organic Solvents	237
16.7.4 Electrolytes Based on Molten Fluorides	238
General Remarks	238
BeF ₂ -LiF	239
BeF ₂ -NaF, BeF ₂ -NaF-NH ₄ F	240
BeF ₂ -NaF-KF	241
BeF ₂ -LiF-NaF-KF	242
Other Melts Based on Fluorides	243
Beryllium Alloys with the Cathode Metal	244
16.7.5 Electrolytes Based on Molten Chlorides	244
General Remarks	244
BeCl ₂ -LiCl	246

	Page
BeCl ₂ –NaCl	246
General Remarks	246
Decomposition Potential	246
Deposition and Crystallization Mechanisms	247
Experimental Conditions and Properties of Depositions	248
BeCl ₂ –KCl	253
BeCl ₂ –LiCl–KCl	253
General Remarks	253
Decomposition Voltages	253
Nucleation and Crystallization Overvoltage	255
Effect of Temperature	257
Experimental Conditions and Polarization Curves	258
BeCl ₂ –NaCl–KCl	264
General Remarks	264
Cathodes of Solid Al, Mo, Ni, and Alloyed Steel	264
Alloy Formation on Cu and Pt Cathodes	265
Liquid Cathodes of Bi, Zn, Al	266
BeCl ₂ –LiCl–NaCl–KCl	269
Other Chloride Melts	270
BeCl ₂ –LiCl–KCl–CsCl	270
BeCl ₂ –NaCl–KCl–MgCl ₂	270
BeCl ₂ –NaCl–KCl–SrCl ₂	270
BeCl ₂ –NaCl–CaCl ₂ ; BeCl ₂ –NaCl–KCl–CaCl ₂ , –SrCl ₂ , –BaCl ₂	271
16.7.6 Electrolytes Based on Other Melts	271
Fluoride–Chloride Melts	271
Iodide Melts	272
Melts Containing BeS	272
Other Melts	272
16.7.7 Electrolytes Based on Molten Organic Complex Beryllium Salts	273
Physical Constants and Conversion Factors	276
