

# Contents

<b>1</b>	<b>Motivation and Overview .....</b>	<b>1</b>
1.1	Availability of programs, mentioned in the book.....	6
1.2	Availability of the figures, given in the book.....	6
<b>2</b>	<b>Thinking in Voltages, Currents, Fields and Impedances .....</b>	<b>7</b>
<b>3</b>	<b>Electric Fields.....</b>	<b>19</b>
3.1	Effects of electric fields and their calculation .....	22
<b>4</b>	<b>Magnetic Fields.....</b>	<b>29</b>
4.1	Effects of magnetic fields.....	29
4.2	Calculation of magnetic field strength of single and multicore cables .....	31
4.3	Magnetic fields of Geofol transformers .....	34
4.4	Magnetic stray fields of arbitrary arrangements of thin wires .....	35
4.4.1	Magnetic field of a four conductor arrangement.....	35
4.4.2	Magnetic fields of twisted cables.....	37
4.4.3	Example calculation with the program STRAYF .....	39
4.4.4	Peculiarities of magnetic fields of twisted cables .....	41
<b>5</b>	<b>Electromagnetic Fields .....</b>	<b>45</b>
5.1	Characterization of Electromagnetic Waves .....	45
5.2	Effects of electromagnetic fields.....	50
5.3	The elementary dipoles .....	54
5.3.1	Distance conversion .....	61
5.3.2	Field impedances .....	65
5.4	Effective height, effective antenna area, radiation resistance .....	68
5.5	Estimating the field strength of aperture antennas .....	75
5.5.1	Power density and electric field strength in the far field region .....	76

5.5.2	Power density and electric field strength in the near field region .....	77
5.5.3	Description of the program APERTUR .....	79
5.5.4	Program SAFEDIST .....	79
<b>6</b>	<b>The Interference Model .....</b>	<b>83</b>
6.1	Galvanic coupling .....	90
6.1.1	Measures against a galvanic coupling interference.....	92
6.2	Capacitive coupling.....	93
6.2.1	Measures to lower the capacitive coupling .....	95
6.3	Inductive coupling.....	97
6.3.1	Magnetic decoupling.....	100
6.3.2	Definition of an effective mutual inductance for a multicore cable.....	101
6.3.3	Measures to reduce the inductive coupling.....	104
6.4	Electromagnetic coupling.....	106
6.4.1	Measures to reduce the electromagnetic coupling .....	107
6.4.2	The $\lambda/2$ -coupling model .....	108
6.4.3	Some remarks regarding the estimation of the electromagnetic coupling.....	111
<b>7</b>	<b>Intrasystem Measures .....</b>	<b>121</b>
7.1	Some remarks regarding grounding, shielding, cabling, and filtering .....	123
7.1.1	Grounding .....	123
7.1.2	Shielding .....	124
7.1.3	Cabling.....	126
7.1.4	Filtering.....	129
7.2	Shielding against electric fields - shield of bars.....	138
7.3	Shielding against magnetic fields.....	141
7.3.1	Shielding against static magnetic and very low frequency magnetic fields .....	141
7.3.2	Shielding against medium frequency magnetic fields.....	149
7.3.3	Two parallel plates shielding against alternating magnetic fields.....	149
7.3.4	Hollow sphere shielding against magnetic fields.....	150
7.3.5	Hollow cylinder within a lateral magnetic field.....	151
7.3.6	Hollow cylinder within a longitudinal magnetic field .....	151
7.4	Shielding theory according to Schelkunoff – short and concise.....	153

7.4.1	Source code of the program SHIELD .....	157
7.5	Leakages, openings, cavity resonances .....	157
7.5.1	Leakages, signal penetrations .....	159
7.5.2	Low frequency resonances, cavity resonances.....	167
7.6	Cable coupling and cable transfer impedance .....	171
7.6.1	Cable coupling .....	171
7.6.2	Coupling into untwisted and twisted two conductor cables.....	173
7.6.3	Coupling into and between shielded cables .....	175
7.6.4	Cable shield connection at the device input.....	200
<b>8</b>	<b>Atmospheric Noise, Electromagnetic Environment and Limit Values .....</b>	<b>205</b>
8.1	Atmospheric noise sources, electromagnetic environment.....	206
8.2	Conversion of limit values .....	218
8.2.1	Distance conversion .....	218
8.2.2	Conversion $E \rightarrow H$ and $H \rightarrow E$ .....	220
<b>9</b>	<b>EMC Engineering and Analysis .....</b>	<b>225</b>
9.1	Development phases of a complex system .....	227
9.1.1	Conceptual phase .....	227
9.1.2	Definition phase .....	228
9.1.3	Construction and building phase.....	230
9.2	EMC- Test planning .....	232
9.3	Execution of analysis .....	242
<b>10</b>	<b>Numerical Techniques for Field Calculation .....</b>	<b>247</b>
10.1	Selecting the appropriate technique .....	249
10.2	Plausibility check .....	256
10.3	Application examples of analysis.....	265
10.3.1	Investigation of resonances on a passenger car.....	266
10.3.2	Influence of a dielectric material on the radiation of a printed circuit board.....	267
10.3.3	Radiation of a mobile phone .....	268
10.3.4	Electromagnetic field on a frigate.....	269
10.4	Guidelines for using numerical methods.....	271
10.5	Application: Antenna coupling .....	275
10.5.1	General remarks to the N-port theory .....	275
10.5.2	Two port parameter.....	276
10.5.3	Calculation of antenna coupling .....	278
10.5.4	Source code of the program MATCH.....	283

<b>11</b>	<b>Model for Immunity Testing .....</b>	<b>285</b>
11.1	Standardised immunity test methods.....	286
11.2	Statistical approach to model the immunity .....	288
11.2.1	Malfunction probability .....	289
11.3	Fault frequency function .....	292
11.3.1	Interpretation of the results of immunity tests .....	295
11.4	Time variant immunity .....	296
11.4.1	Modelling.....	297
11.4.2	Immunity of microcontroller based equipment.....	303
<b>A1</b>	<b>Electric Fields of Rod Arrangements.....</b>	<b>307</b>
A1.1	Potential coefficients and partial capacitances.....	308
A1.2	Horizontal conductors above ground .....	309
A1.2.1	Source code of the program HCOND .....	315
A1.3	Vertical conductors above ground.....	315
A1.3.1	Source code of the program VROD.....	320
<b>A2</b>	<b>Magnetic Stray Fields.....</b>	<b>321</b>
A2.1	Stray field low installation of cables .....	321
A2.1.1	The single core cable (case (a) of chapter 4.2).....	321
A2.1.2	Cable with one forward and one return conductor (case (b) of chapter 4.2) .....	322
A2.1.3	Use of two forward- and two return conductors (case (c1) of chapter 4.2) .....	323
A2.1.4	Installation of the forward and return conductors above a common ground plane (case (c2) of chapter 4.2) .....	324
A2.1.5	Use of four forward and four return conductors (case (d) of chapter 4.2) .....	325
A2.2	Computer program for predicting magnetic stray fields .....	327
A2.2.1	Field of a finitely long wire .....	327
A2.2.2	Field of a single layered coil .....	329
A2.2.3	Considering phase relations .....	333
A2.2.4	Source code of the program STRAYF .....	335
<b>A3</b>	<b>Self and Mutual Inductances.....</b>	<b>337</b>
A3.1	Mutual inductance between a finitely long conductor on the y-axis and a trapezoidal area in the xy-plane .....	337
A3.2	Decomposition of an area in the xy-plane bounded by straight lines .....	340
A3.3	Treatment of arbitrary conductor loops in space.....	341

A3.4	Mutual inductance between 2 circular loops with lateral displacement.....	343
A3.5	Source code of the program MUTUAL .....	345
<b>A4</b>	<b>Elementary Dipoles .....</b>	<b>347</b>
A4.1	Hertzian dipole .....	347
A4.1.1	Prediction of the field strength components for the general case.....	347
A4.1.2	Solution for time harmonic excitation .....	349
A4.2	Current loop (loop antenna) .....	353
A4.3	Comparison of the wave impedances.....	360
<b>A5</b>	<b>The Polarization Ellipsis .....</b>	<b>361</b>
A5.1	Two dimensional case ( $E_z=0$ ).....	362
A5.2	Three dimensional case – solution in the time domain .....	364
A5.2.1	Some consideration regarding the plane of the polarization ellipse .....	367
A5.3	Three dimensional case – solution in the frequency range.....	375
<b>A6</b>	<b>Skin Effect and Shielding Theory of Schelkunoff.....</b>	<b>377</b>
A6.1	Skin effect of a conducting half space.....	377
A6.1.1	Strong skin effect within a cylindrical conductor .....	379
A6.1.2	Weak skin effect within a cylindrical conductor.....	380
A6.2	Shielding theory according to Schelkunoff.....	380
A6.2.1	Introduction.....	380
A6.2.2	Necessary equations.....	381
A6.2.3	Shielding mechanism .....	382
A6.2.4	Shielding efficiency .....	384
A6.2.5	Simple application of Schelkunoff's theory.....	384
A6.2.6	Procedure for a graphical determination of the shielding efficiency .....	386
A6.2.7	Error estimations.....	390
A6.2.8	Summary .....	392
<b>A7</b>	<b>Example of an EMC-Design Guide for Systems .....</b>	<b>393</b>
A7.1	Grounding .....	393
A7.2	System filtering .....	395
A7.3	Shielding .....	395
A7.4	Cabling.....	396

<b>A8</b>	<b>25 EMC-Rules for the PCB-Layout and the Device Construction</b>	<b>401</b>
<b>A9</b>	<b>Easy-to-use Procedure for Predicting the Cable Transfer Impedance .....</b>	<b>409</b>
A9.1	Predicting the voltage ratio with help of an oscilloscope....	413
A9.2	Predicting the voltage ratio by a network analyzer .....	415
<b>A10</b>	<b>Capacitances and Inductances of Common Interest .....</b>	<b>421</b>
<b>A11</b>	<b>Reports of Electromagnetic Incompatibilities.....</b>	<b>429</b>
<b>A12</b>	<b>Solutions to the Exercises.....</b>	<b>435</b>
<b>A13</b>	<b>Physical Constants and Conversion Relations.....</b>	<b>455</b>
A13.1	Physical Units and Constants .....	455
A13.2	Conversion table for pressure.....	456
A13.3	Conversion table for energy .....	457
A13.4	Conversion relations for electric and magnetic quantities .....	457
A13.5	Conversion of logarithmic quantities .....	458
A13.6	Abbreviations	459
<b>A14</b>	<b>Bibliography</b>	<b>461</b>
	<b>Index</b>	<b>467</b>
