CHAPTER 1

Characteristics of Solid Sampling Using the Graphite Furnace

ULRICH KURFÜRST	1
1.1 Specific Features of the Graphite Furnace	1
1.2 Historical Milestones in the Development of the Method	2
1.3 The Method's Advantages	4
1.3.1 Solid Sampling is Fast	5
1.3.2 Solid Sampling is Economical	8
1.3.3 Solid Sampling Procedures are Simple	9
1.3.4 Solid Sampling is a Powerful Detection Method	10
1.3.5 Solid Sampling Prevents Analytical Errors	11
1.3.6 Solid Sampling Reduces Working Place Hazards and Environmental Pollution	11
1.4 The "Philosophy" of the Direct Analysis of the Solid Sample	12
1.5 Prospects	16
1.6 What can the Method do?	18

CHAPTER 2

General Aspects of the Graphite Furnace Solid Sampling Method

ULRICH KURFÜRST	21
2.1 Sample Handling and Instrumental Requirements for Direct Sampling	21
2.1.1 Mechanical Sample Pretreatment	21
2.1.2 Dosing and Weighing of Microsamples	22
2.1.3 Sample Introduction Systems	24
2.1.3.1 Direct Loading of Test Samples into the Furnace	24
2.1.3.2 Utilization of a Sample Carrier	26
2.1.4 Working Place Conditions	32
2.1.4.1 Data Support	32
2.1.4.2 Ergonomics	32
2.1.4.3 Automation	33
2.2 Calibration in Solid Sampling Analysis	35

2.2.1	Reference Materials	35
2.2.1.1	Calibration Using Reference Solutions	36
2.2.1.2	Calibration Using Certified Reference Materials	37
2.2.1.3	Preparation of Synthetic Solid Reference Materials	47
2.2.2	Calibration Methods	49
2.2.2.1	Direct Comparison of Response Data	49
2.2.2.2	Calibration Curve Method	50
2.2.2.3	Analyte Addition Methods	52
2.2.2.4	Special Calibration Approaches	58
2.3	Sample Heterogeneity and Sampling Error	61
2.3.1	Sampling Characteristics of Powdered Samples	62
2.3.1.1	Influence of Physical Sample Properties	62
2.3.1.2	Concept of the Homogeneity Constant	65
2.3.2	Samples Containing "Analyte Nuggets"	69
2.3.3	Influence of Grinding/Milling	77
2.4	Accuracy Assessment of Solid Sampling Analysis	80
2.4.1	Errors and Accuracy	80
2.4.1.1	Systematic Effects	83
2.4.1.2	Random Effects	85
2.4.2	Analytical Quality Control in Solid Sampling	87
2.4.2.1	Assessment of Trueness	87
2.4.2.2	Stability of Analytical Conditions	90
2.4.2.3	Estimation of Uncertainty in the Analytical Result	94
2.4.2.4	Combined Uncertainty in Solid Sampling Results	101
2.4.2.5	Are the Effects Worth the Effort?	109
2.4.3	Treatment of Outliers	112
2.5	Accomplishment of the Analytical Process	114
2.5.1	Adequate Test Sample Mass	114
2.5.2	Limit of Detection and Limit of Analysis	115
2.5.3	Thermal Sample Pretreatment in the Graphite Furnace	117
2.5.4	In-Situ Matrix Modification	121
2.5.4.1	Chemical Matrix Modification	121
2.5.4.2	The Use of Graphite Powder	122

CHAPTER 3

Direct Solid Sampling with Graphite Furnace Atomic Absorption Spectrometry (GF-AAS)

ULRICH KURFÜRST	129
3.1 Instrumental Demands for the Elimination of Interferences	129
3.1.1 Background Measurement and Correction Techniques	129
3.1.1.1 Background Measurement Using Line Sources	130
3.1.1.2 Background Measurement Using Continuum Sources	134
3.1.2 Analyte Atomization Under Isothermal Conditions	134
3.1.2.1 Techniques for Providing Isothermal Conditions	135

3.1.2.2	Atomization Characteristics for Solid Samples	138
3.2	Sensitivity and Range of Analyte Determination	143
3.2.1	Selection of a Suitable Analytical Line	144
3.2.2	Extension of the Analytical Range	147
3.3	Experience with Direct Solid Sampling	151
3.3.1	Particulars of Sample Materials	151
3.3.2	Particulars of Element Determination	164
3.3.3	Mercury Determination with Direct Solid Sampling	168
3.3.3.1	Direct Determination of Hg in the Graphite Furnace	169
3.3.3.2	The Hadeishi Furnace	170
3.4	Analytical Applications	174

CHAPTER 4

Solid Sampling by Electrothermal Vaporization-Inductively Coupled Plasma-Atomic Emission and -Mass Spectrometry (ETV-ICP-AES/-MS)

PETER VERREPT, SYLVIE BOONEN, LUC MOENS AND RICHARD DAMS 191

4.1	Introduction	191
4.2.	Characteristics of the ICP Technique	192
4.2.1	The Inductively Coupled Plasma	192
4.2.2	Atomic Emission Spectrometry	193
4.2.3	Mass Spectrometry	194
4.3	Electrothermal Vaporization	195
4.3.1	The Need for an Alternative Sample Introduction System	195
4.3.2	The Principle of ETV	196
4.3.3	Different Designs of Furnaces to be Coupled with the ICP	198
4.3.4	Coupling the ETV Device to an ICP	201
4.4	Transient Signals in the ICP Technique	203
4.4.1	Background Problems and Correction Techniques in ICP-AES ...	203
4.4.2	Data Acquisition and Interpretation	207
4.4.3	Coupling the Furnace to the ICP-MS	209
4.5	Special Methodical Features	209
4.5.1	ETV-ICP Versus GF-AAS	209
4.5.1.1	Atomization Versus Vaporization	209
4.5.1.2	Calibration Line	213
4.5.1.3	Test Sample Mass	217
4.5.1.4	Limits of Detection – Limits of Analysis	218
4.5.2	ETV-ICP Versus Pneumatic Nebulization ICP	220
4.6	Interferences and Overcoming them in AES and MS	222
4.6.1	Non-Spectral Interferences	222
4.6.1.1	Ashing/Vaporization	222
4.6.1.2	Aerosol Formation and Transport Effects	225
4.6.1.3	Plasma Sampling	227
4.6.2	Spectral Interferences	228

4.6.2.1	Spectral Interferences in SS-ETV-ICP-AES	228
4.6.2.2	Spectral Interferences in ETV-ICP-MS	230
4.6.3	Transport Efficiencies and Calibration	231
4.7	Applications	235

CHAPTER 5

Introduction of Slurry Samples into the Graphite Furnace

MARKUS STOEPLER AND ULRICH KURFÜRST	247
---	-----

5.1	Introduction	247
5.2	Preparation and Characterization of Slurries	248
5.2.1	Slurry Preparation	248
5.2.1.1	Particle Size, Grinding	248
5.2.1.2	Subsample Intake	251
5.2.1.3	Dilution, Reagent Addition	253
5.2.2	Accuracy of Slurry Analysis	254
5.2.2.1	Representativity in Slurry Analysis	254
5.2.2.2	Random Effects	257
5.2.2.3	Systematic Effects	258
5.2.2.4	Uncertainty in Slurry Analysis Results	260
5.2.3	Slurry Stability	262
5.3	Instrumentation and Procedures	263
5.3.1	Agitation	263
5.3.2	Manual Slurry Introduction	264
5.3.3	Automated Slurry Introduction	268
5.3.3.1	Separate Slurry Agitation	268
5.3.3.2	Agitation of Slurries on an Autosampler Tray	270
5.3.3.3	Commercial System	274
5.4	Interference and Overcoming it	277
5.4.1	Matrix Modification	277
5.4.2	Application of Oxidizing or Reducing Conditions	278
5.5	Methodological Features in Comparison	279
5.5.1	Slurry Sampling Versus Direct Solid Sampling	279
5.5.2	Slurry Sampling Versus Sampling of Digested Samples	281
5.6	Applications	282

CHAPTER 6

Advantageous Fields of Application for Solid Sampling Analysis

JÜRGEN FLECKENSTEIN, MARKUS STOEPLER AND ULRICH KURFÜRST	319
---	-----

6.1	Introduction	319
6.2	Determination of a few Elements in Many Samples	320
6.2.1	Bio-Monitoring and Investigations of Environmental Burden	321
6.2.2	Element Distribution Analysis	327

6.2.3	Transfer Chain of Metals in the Environment	331
6.3	Control Analysis	333
6.3.1	Analytical Control in Industrial Production	333
6.3.2	Analysis of Foodstuffs	340
6.4	Determination of Very Low Content Levels	343
6.4.1	Analysis of Biological Materials with Low Contamination	343
6.4.2	Analysis of High Purity Materials for Technological Use	344
6.5	Analysis of Filter Media	350
6.5.1	Direct Analysis of Loaded Filter Media	350
6.5.2	Special Sampling Techniques for Particulate Matter	351
6.6	Homogeneity Testing	354
6.6.1	Production Control of Reference Materials	356
6.6.2	The Concept of a Minimum Representative Test Sample Mass	363
6.6.3	Homogeneity Testing Using Slurry Sampling	365
6.6.4	Assessing a Reliable Homogeneity Characterization	368
6.6.5	The Potential Relevance of Heterogeneity Effects	371
6.7	Further Advantageous Fields of Application	373
6.7.1	Clinical/Medical Applications	373
6.7.2	Water Analysis by Use of Solid Enrichment Materials	379
6.7.3	Forensic Investigations	382
6.7.4	Analysis of Rare or Precious Sample Materials	384
6.7.5	A Mobile Laboratory	385
6.8	State and Role of SS-GF-AAS in Control and Research Laboratories	386
6.8.1	Utilization in an Analytical Laboratory	386
6.8.2	Method of Choice in a "Non-Analytical" Laboratory	388
