Part I Deformed Field Theory: Physical Aspects

1	Differential Calculus and Gauge Transformations on a Deformed Space	3
	Julius Wess	
1.1	Introduction	3
1.2	The algebra	5
1.3	The star product	8
1.4	A deformed differential calculus	10
1.5	A deformed algebra of differential operators	11
1.6	Gauge transformations	13
1.7	Diffeomorphism	16
1.8	Conclusion	17
1.9	Appendix	17
	References	20
2	Deformed Gauge Theories	23
	Julius Wess	
2.1	Introduction	23
2.2	Gauge transformations	24
2.3	Hopf algebra techniques	26
2.4	Field equations	27
2.5	Matter fields	30
2.6	Examples	31
	References	36
3	Einstein Gravity on Deformed Spaces	39
	Julius Wess	
3.1	Introduction	39
3.2	Differential operators	40
3.3	Tensor fields	43
3.4	Einstein–Hilbert gravity	46
	References	51

4	Deformed Gauge Theory: Twist Versus Seiberg–Witten Approach . .	53
	Marija Dimitrijević	
4.1	Introduction	53
4.2	θ -deformed space	54
4.3	Twisted gauge theory	59
4.3.1	Gauge transformations	59
4.3.2	Field strength tensor	61
4.3.3	Equations of motion	62
4.4	Seiberg–Witten gauge theory	64
4.4.1	Enveloping algebra approach	65
4.4.2	Seiberg–Witten map	66
4.5	Comments	69
	References	70
5	Another Example of Noncommutative Spaces: κ-Deformed Space . .	73
	Marija Dimitrijević	
5.1	Introduction	73
5.2	κ -deformed space	74
5.3	Star product approach	78
5.4	Gauge theory on the κ -deformed space	79
5.5	Gauge fields	81
5.6	Integral and the action	82
	References	84
Part II Noncommutative Geometries: Foundations and Applications		
6	Noncommutative Spaces	89
	Fedele Lizzi	
6.1	Commutative geometry (and topology)	89
6.1.1	Topology and algebras	90
6.1.2	Reconstructing the space from the algebra	92
6.1.3	Geometrical structures	94
6.2	Noncommutative spaces	95
6.2.1	The GNS construction	96
6.2.2	Commutative and noncommutative spaces	99
6.2.3	Deformations of spaces	100
6.3	The noncommutative geometry of canonical commutation relations	101
6.4	Final remarks	108
	References	108
7	Quantum Groups, Quantum Lie Algebras and Twists	111
	Paolo Aschieri	
7.1	Introduction	111
7.2	Hopf algebras from groups	112
7.3	Quantum groups and $SL_q(2)$	114
7.4	Universal enveloping algebras and $U_q(sl(2))$	117

7.5	Duality	119
7.6	Quantum Lie algebra	122
7.7	Deformation by twist and quantum Poincaré Lie algebra	124
	Appendix	127
7.8	Algebras, coalgebras, and Hopf algebras	127
7.9	Hopf algebra twists	130
	References	131
8	Noncommutative Symmetries and Gravity	133
	Paolo Aschieri	
8.1	Introduction	133
8.2	Deformation by twists	135
8.2.1	The twist $\mathcal{F}$	136
8.2.2	$\star$ -Tensor algebra	139
8.2.3	$\star$ -Diffeomorphism symmetry	143
8.2.3.1	Relation between $U\Xi_\star$ and $U\Xi^{\mathcal{F}}$	149
8.2.4	Twisted versus spontaneously broken symmetries	150
8.3	Poincaré symmetry	152
8.3.1	$\star$ -Poincaré algebra	152
8.3.2	Twisted Poincaré algebra	155
8.4	Covariant derivative, torsion, and curvature	156
8.5	Metric and Einstein equations	158
	Appendix	159
8.6	Differential operators and vector fields	159
8.7	Proof that the coproduct $\Delta_\star$ is coassociative	161
8.8	Proof that the bracket $[u \nu]_\star$ is the adjoint action	162
	References	162
9	Twist Deformations of Quantum Integrable Spin Chains	165
	Petr Kulish	
9.1	Introduction	165
9.2	Algebraic Bethe ansatz (QISM)	170
9.2.1	QISM for the XXX model	171
9.2.1.1	The Yangian $\mathcal{Y}(sl(2))$	175
9.2.1.2	Higher spins and generalizations	175
9.2.2	Anisotropic XXZ spin chain	176
9.3	Twists and QISM	179
9.3.1	Jordanian twist	181
9.3.2	Abelian twist	182
9.3.3	Generalities on twist transformations	183
9.3.4	Coboundary twists and the jordanian deformation	185
9.4	Conclusions	187
	References	187
