

Contents

Opening Address

WIA and the Practice of Theory in Computer Science.....	1
<i>D.R. Raymond</i>	

Contributed Papers

Algorithms for Guided Tree Automata.....	6
<i>M. Biehl, N. Klarlund, and T. Rauhe</i>	
Time Series Forecasting by Finite-State Automata.....	26
<i>R. Boné, C. Daguin, A. Georgevail, and D. Maurel</i>	
Dynamical Implementation of Nondeterministic Automata and Concurrent Systems	35
<i>M. Garzon and E. Eberbach</i>	
Implementing WS1S via Finite Automata.....	50
<i>J. Glenn and W. Gasarch</i>	
Instruction Computation in Subset Construction.....	64
<i>J.H. Johnson and D. Wood</i>	
Building Automata on Schemata and Acceptability Tables: Application to French Data Adverbials.....	72
<i>D. Maurel</i>	
FSA Utilities: A Toolbox to Manipulate Finite-State Automata	87
<i>G. van Noord</i>	
A New Quadratic Algorithm to Convert a Regular Expression into an Automaton.....	109
<i>J.-L. Ponty, D. Ziadi, and J.-M. Champarnaud</i>	
Implementing Sequential and Parallel Programs for the Homing Sequence Problem	120
<i>B. Ravikumar and X. Xiong</i>	
Integrating Hands-on Work into the Formal Languages Course via Tools and Programming	132
<i>S.H. Rodger</i>	

NFA to DFA Transformation for Finite Languages	149
<i>K. Salomaa and S. Yu</i>	
How to Use Sorting Procedures to Minimize DFA	159
<i>B. Schubert</i>	
FIRE Lite: FAs and REs in C++	167
<i>B.W. Watson</i>	
Author Index	189
