

CONTENTS

ADVICE TO THE READER	v
CONTENTS OF THE ELEMENTS OF MATHEMATICS SERIES	9
INTRODUCTION	11
CHAPTER I. <i>Topological Structures</i>	17
§ 1. Open sets, neighbourhoods, closed sets	17
1. Open sets	17
2. Neighbourhoods	18
3. Fundamental systems of neighbourhoods; bases of a topology	21
4. Closed sets	21
5. Locally finite families	22
6. Interior, closure, frontier of a set; dense sets	23
§ 2. Continuous functions	25
1. Continuous functions	25
2. Comparison of topologies	28
3. Initial topologies	30
4. Final topologies	32
5. Pasting together of topological spaces	34
§ 3. Subspaces, quotient spaces	35
1. Subspaces of a topological space	35
2. Continuity with respect to a subspace	37
3. Locally closed subspaces	38
4. Quotient spaces	39
5. Canonical decomposition of a continuous mapping ...	40
6. Quotient space of a subspace	42

CONTENTS

§ 4. Product of topological spaces	43
1. Product spaces	43
2. Section of an open set; section of a closed set, projection of an open set. Partial continuity	46
3. Closure in a product	47
4. Inverse limits of topological spaces	48
§ 5. Open mappings and closed mappings	50
1. Open mappings and closed mappings	50
2. Open equivalence relations and closed equivalence relations	52
3. Properties peculiar to open mappings	54
4. Properties peculiar to closed mappings	56
§ 6. Filters	57
1. Definition of a filter	57
2. Comparison of filters	58
3. Bases of a filter	59
4. Ultrafilters	60
5. Induced filter	61
6. Direct image and inverse image of a filter base	62
7. Product of filters	63
8. Elementary filters	64
9. Germs with respect to a filter	65
10. Germs at a point	68
§ 7. Limits	68
1. Limit of a filter	68
2. Cluster point of a filter base	69
3. Limit point and cluster point of a function	70
4. Limits and continuity	72
5. Limits relative to a subspace	73
6. Limits in product spaces and quotient spaces	74
§ 8. Hausdorff spaces and regular spaces	75
1. Hausdorff spaces	75
2. Subspaces and products of Hausdorff spaces	77
3. Hausdorff quotient spaces	78
4. Regular spaces	80
5. Extension by continuity; double limit	81
6. Equivalence relations on a regular space	82
§ 9. Compact spaces and locally compact spaces	83
1. Quasi-compact spaces and compact spaces	83
2. Regularity of a compact space	85

CONTENTS

3. Quasi-compact sets; compact sets; relatively compact sets	85
4. Image of a compact space under a continuous mapping	87
5. Product of compact spaces	88
6. Inverse limits of compact spaces	89
7. Locally compact spaces	90
8. Embedding of a locally compact space in a compact space	92
9. Locally compact σ -compact spaces	93
10. Paracompact spaces	94
§ 10. Proper mappings	97
1. Proper mappings	97
2. Characterization of proper mappings by compactness properties	101
3. Proper mappings into locally compact spaces	104
4. Quotient spaces of compact spaces and locally compact spaces	105
§ 11. Connectedness	107
1. Connected spaces and connected sets	107
2. Image of a connected set under a continuous mapping	109
3. Quotient spaces of a connected space	110
4. Product of connected spaces	110
5. Components	110
6. Locally connected spaces	112
7. Application : the Poincaré-Volterra theorem	113
Exercises for § 1	117
Exercises for § 2	119
Exercises for § 3	122
Exercises for § 4	125
Exercises for § 5	127
Exercises for § 6	129
Exercises for § 7	132
Exercises for § 8	133
Exercises for § 9	141
Exercises for § 10	150
Exercises for § 11	155
Historical Note	162
Bibliography	167

CONTENTS

CHAPTER II. <i>Uniform Structures</i>	169
§ 1. Uniform spaces	169
1. Definition of a uniform structure	169
2. Topology of a uniform space	171
§ 2. Uniformly continuous functions	174
1. Uniformly continuous functions	174
2. Comparison of uniformities	175
3. Initial uniformities	176
4. Inverse image of a uniformity; uniform subspaces	177
5. Least upper bound of a set of uniformities	178
6. Product of uniform spaces	179
7. Inverse limits of uniform spaces	180
§ 3. Complete spaces	181
1. Cauchy filters	181
2. Minimal Cauchy filters	183
3. Complete spaces	184
4. Subspaces of complete spaces	186
5. Products and inverse limits of complete spaces	186
6. Extension of uniformly continuous functions	190
7. The completion of a uniform space	191
8. The Hausdorff uniform space associated with a uniform space	195
9. Completion of subspaces and product spaces	197
§ 4. Relations between uniform spaces and compact spaces ...	198
1. Uniformity of compact spaces	198
2. Compactness of uniform spaces	200
3. Compact sets in a uniform space	203
4. Connected sets in a compact space	204
Exercises for § 1	206
Exercises for § 2	207
Exercises for § 3	208
Exercises for § 4	209
Historical Note	216
Bibliography.....	218
CHAPTER III : <i>Topological Groups</i>	219
§ 1. Topologies on groups	219
1. Topological groups.....	219

CONTENTS

2. Neighbourhoods of a point in a topological group	221
3. Isomorphisms and local isomorphisms	224
§ 2. Subgroups, quotient groups, homomorphisms, homogeneous spaces, product groups	225
1. Subgroups of a topological group	225
2. Components of a topological group	227
3. Dense subgroups	228
4. Spaces with operators	228
5. Homogeneous spaces	231
6. Quotient groups	232
7. Subgroups and quotient groups of a quotient group . .	233
8. Continuous homomorphisms and strict morphisms . .	235
9. Products of topological groups	237
10. Semi-direct products	239
§ 3. Uniform structures on groups	242
1. The right and left uniformities on a topological group	242
2. Uniformities on subgroups, quotient groups and product groups	244
3. Complete groups	245
4. Completion of a topological group	246
5. Uniformity and completion of a commutative topological group	248
§ 4. Groups operating properly on a topological space; compact- ness in topological groups and spaces with operators	250
1. Groups operating properly on a topological space	250
2. Properties of groups operating properly	253
3. Groups operating freely on a topological space	254
4. Locally compact groups operating properly	255
5. Groups operating continuously on a locally compact space	257
6. Locally compact homogeneous spaces	259
§ 5. Infinite sums in commutative groups	261
1. Summable families in a commutative group	261
2. Cauchy's criterion	262
3. Partial sums; associativity	264
4. Summable families in a product of groups	266
5. Image of a summable family under a continuous homomorphism	267
6. Series	267
7. Commutatively convergent series	269

CONTENTS

§ 6. Topological groups with operators; topological rings, division rings and fields	271
1. Topological groups with operators	271
2. Topological direct sum of stable subgroups	272
3. Topological rings	274
4. Subrings; ideals; quotient rings; products of rings	276
5. Completion of a topological ring	276
6. Topological modules	278
7. Topological division rings and fields	281
8. Uniformities on a topological division ring	282
§ 7. Inverse limits of topological groups and rings	284
1. Inverse limits of algebraic structures	284
2. Inverse limits of topological groups and spaces with operators	286
3. Approximation of topological groups	289
4. Application to inverse limits	293
Exercises for § 1	296
Exercises for § 2	298
Exercises for § 3	306
Exercises for § 4	308
Exercises for § 5	314
Exercises for § 6	315
Exercises for § 7	324
Historical Note	327
Bibliography	328
CHAPTER IV : <i>Real Numbers</i>	329
§ 1. Definition of real numbers	329
1. The ordered group of rational numbers	329
2. The rational line	330
3. The real line and real numbers	331
4. Properties of intervals in $\mathbf{R}$	332
5. Length of an interval	333
6. Additive uniformity of $\mathbf{R}$	334
§ 2. Fundamental topological properties of the real line	334
1. Archimedes' axiom	334
2. Compact subsets of $\mathbf{R}$	335
3. Least upper bound of a subset of $\mathbf{R}$	335
4. Characterization of intervals	336

CONTENTS

5. Connected subsets of $\mathbf{R}$	336
6. Homeomorphisms of an interval onto an interval ...	338
§ 3. The field of real numbers	339
1. Multiplication in $\mathbf{R}$	339
2. The multiplicative group $\mathbf{R}^*$	340
3. n th roots	341
§ 4. The extended real line	342
1. Homeomorphism of open intervals of $\mathbf{R}$	342
2. The extended line	343
3. Addition and multiplication in $\bar{\mathbf{R}}$	345
§ 5. Real-valued functions	347
1. Real-valued functions	347
2. Real-valued functions defined on a filtered set	348
3. Limits on the right and on the left of a function of a real variable	349
4. Bounds of a real-valued function	350
5. Envelopes of a family of real-valued functions	352
6. Upper limit and lower limit of a real-valued function with respect to a filter	353
7. Algebraic operations on real-valued functions	356
§ 6. Continuous and semi-continuous real-valued functions ...	359
1. Continuous real-valued functions	359
2. Semi-continuous functions	360
§ 7. Infinite sums and products of real numbers	363
1. Families of positive finite numbers summable in $\mathbf{R}$...	364
2. Families of finite numbers of arbitrary sign summable in $\mathbf{R}$	366
3. Product of two infinite sums	367
4. Families multipliable in $\mathbf{R}^*$	367
5. Summable families and multipliable families in $\mathbf{R}$...	369
6. Infinite series and infinite products of real numbers ..	370
§ 8. Usual expansions of real numbers; the power of $\mathbf{R}$	373
1. Approximations to a real number	373
2. Expansions of real numbers relative to a base sequence	373
3. Definition of a real number by means of its expansion	374
4. Comparison of expansions	376

CONTENTS

5. Expansions to base a	376
6. The power of $\mathbf{R}$	377
Exercises for § 1	378
Exercises for § 2	381
Exercises for § 3	387
Exercises for § 4	388
Exercises for § 5	389
Exercises for § 6	393
Exercises for § 7	397
Exercises for § 8	401
Historical Note	406
Bibliography.....	417
Index of Notation (Chapters I-IV)	419
Index of Terminology (Chapters I-IV)	421
