Creational Patterns

Abstract Factory (87) Provide an interface for creating families of related or dependent objects without specifying their concrete classes.

Builder (97) Separate the construction of a complex object from its representation so that the same construction process can create different representations.

Factory Method (107) Define an interface for creating an object, but let subclasses decide which class to instantiate. Factory Method lets a class defer instantiation to subclasses.

Prototype (117) Specify the kinds of objects to create using a prototypical instance, and create new objects by copying this prototype.

Singleton (127) Ensure a class only has one instance, and provide a global point of access to it.

Structural Patterns

Adapter (139) Convert the interface of a class into another interface clients expect. Adapter lets classes work together that couldn't otherwise because of incompatible interfaces.

Bridge (151) Decouple an abstraction from its implementation so that the two can vary independently.

Composite (163) Compose objects into tree structures to represent part-whole hierarchies. Composite lets clients treat individual objects and compositions of objects uniformly.

Decorator (175) Attach additional responsibilities to an object dynamically. Decorators provide a flexible alternative to subclassing for extending functionality.

Facade (185) Provide a unified interface to a set of interfaces in a subsystem. Facade defines a higher-level interface that makes the subsystem easier to use.

Flyweight (195) Use sharing to support large numbers of fine-grained objects efficiently.

Proxy (207) Provide a surrogate or placeholder for another object to control access to it.

Table of Contents

Contents

Preface

Foreword

Guide to Readers

1 Introduction

1.1 What Is a Design Pattern?

1.2 Design Patterns in Smalltalk MVC

1.3 Describing Design Patterns

1.4 The Catalog of Design Patterns

1.5 Organizing the Catalog

1.6 How Design Patterns Solve Design Problems

1.7 How to Select a Design Pattern

1.8 How to Use a Design Pattern

2 A Case Study: Designing a Document Editor

2.1 Design Problems

2.2 Document Structure

2.3 Formatting

2.4 Embellishing the User Interface

2.5 Supporting Multiple Look-and-Feel Standards

2.6 Supporting Multiple Window Systems

Table of Contents

2.7 User Operations

2.8 Spelling Checking and Hyphenation

2.9 Summary

Design Pattern Catalog

3 Creational Patterns
