

Table of Contents

Introducing CLOVER: An Object-Oriented Functional Language.....	1
<i>Lee Braine and Chris Clack</i>	
Active Patterns.....	21
<i>Martin Erwig</i>	
Context Patterns in Haskell.....	41
<i>Markus Mohnen</i>	
The GRIN Project: A Highly Optimising Back End for Lazy Functional Languages	58
<i>Urban Boquist and Thomas Johnsson</i>	
On Programming Scientific Applications in SAC - A Functional Language Extended by a Subsystem for High-Level Array Operations	85
<i>Sven-Bodo Scholz</i>	
The Implementation and Efficiency of Arrays in Clean 1.1	105
<i>John H.G. van Groningen</i>	
Implementing the Conjugate Gradient Algorithm in a Functional Language	125
<i>Pascal R. Serrarens</i>	
An Implementation of Eden on Top of Concurrent Haskell	141
<i>Silvia Breitingner, Ulrike Klusik and Rita Loogen</i>	
Coordinating Functional Processes Using Petri Nets	162
<i>Claus Aßmann</i>	
Making a Packet: Cost-Effective Communication for a Parallel Graph Reducer.....	184
<i>Hans-Wolfgang Loidl and Kevin Hammond</i>	
The Results of: Profiling Large-Scale Lazy Functional Programs.....	200
<i>Stephen A. Jarvis and Richard G. Morgan</i>	
Two-Pass Heap Profiling: A Matter of Life and Death.....	222
<i>Colin Runciman and Niklas Røjemo</i>	
First Class File I/O	233
<i>Marco Pil</i>	
A Type-Based Algorithm for the Control-Flow Analysis of Higher-Order Concurrent Programs.....	247
<i>Mourad Debbabi, Ali Faour, and Nadia Tawbi</i>	
Calculating a Functional Module for Binary Search Trees	267
<i>Walter Dosch and Bernhard Möller</i>
