About The Authors

Brief Contents

Contents

Preface

Data File Index

Chapter 1. Describing Data: Graphical

1.1 Decision Making in an Uncertain Environment

Random and Systematic Sampling

Sampling and Nonsampling Errors

1.2 Classification of Variables

Categorical and Numerical Variables

Measurement Levels

1.3 Graphs to Describe Categorical Variables

Tables and Charts

Cross Tables

Pie Charts

Pareto Diagrams

1.4 Graphs to Describe Time-Series Data

1.5 Graphs to Describe Numerical Variables

Frequency Distributions

Histograms and Ogives

Shape of a Distribution

Stem-and-Leaf Displays

Scatter Plots

1.6 Data Presentation Errors

Table of Contents

Misleading Histograms

Misleading Time-Series Plots

Chapter 2. Describing Data: Numerical

2.1 Measures of Central Tendency and Location

Mean, Median, and Mode

Shape of a Distribution

Geometric Mean

Percentiles and Quartiles

2.2 Measures of Variability

Range and Interquartile Range

Box-and-Whisker Plots

Variance and Standard Deviation

Coefficient of Variation

Chebyshevs Theorem and the Empirical Rule

z-Score

2.3 Weighted Mean and Measures of Grouped Data

2.4 Measures of Relationships Between Variables

Case Study: Mortgage Portfolio

Chapter 3. Probability

3.1 Random Experiment, Outcomes, and Events

3.2 Probability and Its Postulates

Classical Probability

Permutations and Combinations

Relative Frequency

Subjective Probability

3.3 Probability Rules

Conditional Probability

Statistical Independence

3.4 Bivariate Probabilities

Odds

Overinvolvement Ratios

3.5 Bayes Theorem

Subjective Probabilities in Management Decision Making

Chapter 4. Discrete Random Variables and Probability Distributions

4.1 Random Variables

Table of Contents

4.2 Probability Distributions for Discrete Random Variables

4.3 Properties of Discrete Random Variables

Expected Value of a Discrete Random Variable

Variance of a Discrete Random Variable

Mean and Variance of Linear Functions of a Random Variable

4.4 Binomial Distribution

Developing the Binomial Distribution

4.5 Poisson Distribution

Poisson Approximation to the Binomial Distribution

Comparison of the Poisson and Binomial Distributions

4.6 Hypergeometric Distribution

4.7 Jointly Distributed Discrete Random Variables

Conditional Mean and Variance

Computer Applications

Linear Functions of Random Variables

Covariance

Correlation

Portfolio Analysis

Chapter 5. Continuous Random Variables and Probability Distributions

5.1 Continuous Random Variables

The Uniform Distribution

5.2 Expectations for Continuous Random Variables

5.3 The Normal Distribution

Normal Probability Plots

5.4 Normal Distribution Approximation for Binomial Distribution

Proportion Random Variable

5.5 The Exponential Distribution

5.6 Jointly Distributed Continuous Random Variables

Linear Combinations of Random Variables

Financial Investment Portfolios

Cautions Concerning Finance Models

Chapter 6. Sampling and Sampling Distributions

6.1 Sampling from a Population

Development of a Sampling Distribution

6.2 Sampling Distributions of Sample Means

Table of Contents

Central Limit Theorem

Monte Carlo Simulations: Central Limit Theorem

Acceptance Intervals

6.3 Sampling Distributions of Sample Proportions

6.4 Sampling Distributions of Sample Variances

Chapter 7. Estimation: Single Population

7.1 Properties of Point Estimators

Unbiased

Most Efficient

7.2 Confidence Interval Estimation for the Mean of a Normal Distribution: Population Variance Known

Intervals Based on the Normal Distribution

Reducing Margin of Error

7.3 Confidence Interval Estimation for the Mean of a Normal Distribution: Population Variance Unknown

Students t Distribution

Intervals Based on the Students t Distribution

7.4 Confidence Interval Estimation for Population Proportion (Large Samples)

7.5 Confidence Interval Estimation for the Variance of a Normal Distribution

7.6 Confidence Interval Estimation: Finite Populations

Population Mean and Population Total

Population Proportion

7.7 Sample-Size Determination: Large Populations

Mean of a Normally Distributed Population, Known Population Variance

Population Proportion

7.8 Sample-Size Determination: Finite Populations

Sample Sizes for Simple Random Sampling: Estimation of the Population Mean or Total

Sample Sizes for Simple Random Sampling: Estimation of Population Proportion

Chapter 8. Estimation: Additional Topics

8.1 Confidence Interval Estimation of the Difference Between Two Normal Population Means: Dependent Samples

8.2 Confidence Interval Estimation of the Difference Between Two Normal Population Means: Independent Samples

Two Means, Independent Samples, and Known Population Variances

Two Means, Independent Samples, and Unknown Population Variances Assumed to Be Equal

Table of Contents

Two Means, Independent Samples, and Unknown Population Variances Not Assumed to Be Equal

8.3 Confidence Interval Estimation of the Difference Between Two Population Proportions (Large Samples)

Chapter 9. Hypothesis Testing: Single Population

9.1 Concepts of Hypothesis Testing

9.2 Tests of the Mean of a Normal Distribution: Population Variance Known

p-Value

Two-Sided Alternative Hypothesis

9.3 Tests of the Mean of a Normal Distribution: Population Variance Unknown

9.4 Tests of the Population Proportion (Large Samples)

9.5 Assessing the Power of a Test

Tests of the Mean of a Normal Distribution: Population Variance Known

Power of Population Proportion Tests (Large Samples)

9.6 Tests of the Variance of a Normal Distribution

Chapter 10. Hypothesis Testing: Additional Topics

10.1 Tests of the Difference Between Two Normal Population Means: Dependent Samples

Two Means, Matched Pairs

10.2 Tests of the Difference Between Two Normal Population Means: Independent Samples

Two Means, Independent Samples, Known Population Variances

Two Means, Independent Samples, Unknown Population Variances Assumed to Be Equal

Two Means, Independent Samples, Unknown Population Variances Not Assumed to Be Equal

10.3 Tests of the Difference Between Two Population Proportions (Large Samples)

10.4 Tests of the Equality of the Variances Between Two Normally Distributed Populations

10.5 Some Comments on Hypothesis Testing

Chapter 11. Simple Regression

11.1 Overview of Linear Models

11.2 Linear Regression Model

11.3 Least Squares Coefficient Estimators

Computer Computation of Regression Coefficients

11.4 The Explanatory Power of a Linear Regression Equation

Coefficient of Determination, R^2

Table of Contents

11.5 Statistical Inference: Hypothesis Tests and Confidence Intervals

Hypothesis Test for Population Slope Coefficient Using the F Distribution

11.6 Prediction

11.7 Correlation Analysis

Hypothesis Test for Correlation

11.8 Beta Measure of Financial Risk

11.9 Graphical Analysis

Chapter 12. Multiple Regression

12.1 The Multiple Regression Model

Model Specification

Model Objectives

Model Development

Three-Dimensional Graphing

12.2 Estimation of Coefficients

Least Squares Procedure

12.3 Explanatory Power of a Multiple Regression Equation

12.4 Confidence Intervals and Hypothesis Tests for Individual Regression Coefficients

Confidence Intervals

Tests of Hypotheses

12.5 Tests on Regression Coefficients

Tests on All Coefficients

Test on a Subset of Regression Coefficients

Comparison of F and t Tests

12.6 Prediction

12.7 Transformations for Nonlinear Regression Models

Quadratic Transformations

Logarithmic Transformations

12.8 Dummy Variables for Regression Models

Differences in Slope

12.9 Multiple Regression Analysis Application Procedure

Model Specification

Multiple Regression

Effect of Dropping a Statistically Significant Variable

Analysis of Residuals

Chapter 13. Additional Topics in Regression Analysis

Table of Contents

13.1 Model-Building Methodology

Model Specification

Coefficient Estimation

Model Verification

Model Interpretation and Inference

13.2 Dummy Variables and Experimental Design

Experimental Design Models

Public Sector Applications

13.3 Lagged Values of the Dependent Variable as Regressors

13.4 Specification Bias

13.5 Multicollinearity

13.6 Heteroscedasticity

13.7 Autocorrelated Errors

Estimation of Regressions with Autocorrelated Errors

Autocorrelated Errors in Models with Lagged Dependent Variables

Chapter 14. Analysis of Categorical Data

14.1 Goodness-of-Fit Tests: Specified Probabilities

14.2 Goodness-of-Fit Tests: Population Parameters Unknown

A Test for the Poisson Distribution

A Test for the Normal Distribution

14.3 Contingency Tables

14.4 Nonparametric Tests for Paired or Matched Samples

Sign Test for Paired or Matched Samples

Wilcoxon Signed Rank Test for Paired or Matched Samples

Normal Approximation to the Sign Test

Normal Approximation to the Wilcoxon Signed Rank Test

Sign Test for a Single Population Median

14.5 Nonparametric Tests for Independent Random Samples

Mann-Whitney U Test

Wilcoxon Rank Sum Test

14.6 Spearman Rank Correlation

14.7 A Nonparametric Test for Randomness

Runs Test: Small Sample Size

Runs Test: Large Sample Size

Chapter 15. Analysis of Variance

Table of Contents

15.1 Comparison of Several Population Means

15.2 One-Way Analysis of Variance

Multiple Comparisons Between Subgroup Means

Population Model for One-Way Analysis of Variance

15.3 The Kruskal-Wallis Test

15.4 Two-Way Analysis of Variance: One Observation per Cell, Randomized
Blocks

15.5 Two-Way Analysis of Variance: More Than One Observation per Cell

Chapter 16. Time-Series Analysis and Forecasting

16.1 Components of a Time Series

16.2 Moving Averages

Extraction of the Seasonal Component Through Moving Averages

16.3 Exponential Smoothing

The Holt-Winters Exponential Smoothing Forecasting Model

Forecasting Seasonal Time Series

16.4 Autoregressive Models

16.5 Autoregressive Integrated Moving Average Models

Chapter 17. Additional Topics in Sampling

17.1 Stratified Sampling

Analysis of Results from Stratified Random Sampling

Allocation of Sample Effort Among Strata

Determining Sample Sizes for Stratified Random Sampling with Specified Degree of
Precision

17.2 Other Sampling Methods

Cluster Sampling

Two-Phase Sampling

Nonprobabilistic Sampling Methods

Appendix Tables

Index
