Introduction

Part I: Network Fundamentals

CHAPTER 1 IPv4 AddressingHow It Works

What Are IPv4 Addresses Used For?

What Does an IPv4 Address Look Like?

Network and Subnetwork Masks

Ways to Write a Network or Subnet Mask

Network, Node, and Broadcast Addresses

Classes of IPv4 Addresses

Network vs. Node (Host) Bits

RFC (Private) 1918 Addresses

Table of Contents

Local vs. Remote Addresses

Classless Addressing

Lessons Learned

CHAPTER 2 How to Subnet IPv4 Addresses

Subnetting a Class C Network Using Binary

Subnetting a Class B Network Using Binary

Binary ANDing

So Why AND?

Shortcuts in Binary ANDing

CHAPTER 3 Variable Length Subnet Masking (VLSM)

IP Subnet Zero

VLSM Example

Step 1: Determine How Many H Bits Will Be Needed to Satisfy the Largest Network

Step 2: Pick a Subnet for the Largest Network to Use

Step 3: Pick the Next Largest Network to Work With

Step 4: Pick the Third Largest Network to Work With

Step 5: Determine Network Numbers for Serial Links

CHAPTER 4 Route Summarization

Example for Understanding Route Summarization

Step 1: Summarize Winnipegs Routes

Step 2: Summarize Calgarys Routes

Step 3: Summarize Edmontons Routes

Step 4: Summarize Vancouvers Routes

Route Summarization and Route Flapping

Requirements for Route Summarization

CHAPTER 5 IPv6 AddressingHow It Works

IPv6: A Very Brief Introduction

What Does an IPv6 Address Look Like?

Reducing the Notation of an IPv6 Address

Table of Contents

Rule 1: Omit Leading 0s

Rule 2: Omit All-0s Hextet

Combining Rule 1 and Rule 2

Prefix Length Notation

IPv6 Address Types

Unicast Addresses

Multicast Addresses

Anycast Addresses

CHAPTER 6 Cables and Connections

Connecting a Rollover Cable to Your Router or Switch

Using a USB Cable to Connect to Your Router or Switch

Terminal Settings

LAN Connections

Serial Cable Types

Which Cable to Use?

ANSI/TIA Cabling Standards

T568A Versus T568B Cables

CHAPTER 7 The Command-Line Interface

Shortcuts for Entering Commands

Using the tab Key to Complete Commands

Console Error Messages

Using the Question Mark for Help

enable Command

exit Command

end Command

disable Command

logout Command

Setup Mode

Keyboard Help

History Commands

Table of Contents

terminal Commands

show Commands

Using the Pipe Parameter (|) with the show or more Commands

Using the no and default Forms of Commands

Part II: LAN Switching Technologies

CHAPTER 8 Configuring a Switch

Help Commands

Command Modes

Verifying Commands

Resetting Switch Configuration

Setting Host Names

Setting Passwords

Setting IP Addresses and Default Gateways

Setting Interface Descriptions

The mdix auto Command

Setting Duplex Operation

Setting Operation Speed

Managing the MAC Address Table

Configuration Example

CHAPTER 9 VLANs

Creating Static VLANs

Creating Static VLANs Using VLAN Configuration Mode

Assigning Ports to VLANs

Using the range Command

Configuring a Voice VLAN

Configuring Voice and Data with Trust

Configuring Voice and Data Without Trust

Verifying VLAN Information

Saving VLAN Configurations

Table of Contents

Erasing VLAN Configurations

Configuration Example: VLANs

2960 Switch

CHAPTER 10 VLAN Trunking Protocol and Inter-VLAN Communication

Dynamic Trunking Protocol (DTP)

Setting the VLAN Encapsulation Type

VLAN Trunking Protocol (VTP)

Verifying VTP

Inter-VLAN Communication Using an External Router:

Router-on-a-Stick

Inter-VLAN Communication on a Multilayer Switch Through a Switch Virtual Interface

Removing L2 Switchport Capability of an Interface on an L3 Switch

Configuring Inter-VLAN Communication on an L3 Switch

Inter-VLAN Communication Tips

Configuration Example: Inter-VLAN Communication

ISP Router

CORP Router

L2Switch2 (Catalyst 2960)

L3Switch1 (Catalyst 3560/3650/3750)

L2Switch1 (Catalyst 2960)

CHAPTER 11 Spanning Tree Protocol

Spanning Tree Protocol Definition

Enabling Spanning Tree Protocol

Changing the Spanning-Tree Mode

BPDU Guard (3650/9xxx Series)

Configuring the Root Switch

Configuring a Secondary Root Switch

Configuring Port Priority

Table of Contents

Configuring the Path Cost

Configuring the Switch Priority of a VLAN

Configuring STP Timers

Configuring Optional Spanning-Tree Features

PortFast

BPDUGuard (2xxx/Older 3xxx Series)

Enabling the Extended System ID

Verifying STP

Troubleshooting Spanning Tree Protocol

Configuration Example: PVST+

Core Switch (3650)

Distribution 1 Switch (3650)

Distribution 2 Switch (3650)

Access 1 Switch (2960)

Access 2 Switch (2960)

Spanning-Tree Migration Example: PVST+ to Rapid-PVST+

Access 1 Switch (2960)

Access 2 Switch (2960)

Distribution 1 Switch (3650)

Distribution 2 Switch (3650)

Core Switch (3650)

CHAPTER 12 EtherChannel

EtherChannel

Interface Modes in EtherChannel

Default EtherChannel Configuration

Guidelines for Configuring EtherChannel

Configuring Layer 2 EtherChannel

Configuring Layer 3 EtherChannel

Configuring EtherChannel Load Balancing

Configuring LACP Hot-Standby Ports

Monitoring and Verifying EtherChannel

Table of Contents

Configuration Example: EtherChannel

DLSwitch (3560 or 9300)

ALSwitch1 (2960 or 9200)

ALSwitch2 (2960 or 9200)

CHAPTER 13 Cisco Discovery Protocol (CDP) and Link Layer Discovery Protocol (LLDP)

Cisco Discovery Protocol

Configuring CDP

Verifying and Troubleshooting CDP

CDP Design Tips

Link Layer Discovery Protocol (802.1AB)

Configuring LLDP (802.1AB)

Verifying and Troubleshooting LLDP

Part III: Routing Technologies

CHAPTER 14 Configuring a Cisco Router

Router Modes

Entering Global Configuration Mode

Configuring a Router Name

Configuring Passwords

Password Encryption

Interface Names

Moving Between Interfaces

Configuring a Serial Interface

Assigning an IPv4 Address to a Fast Ethernet Interface

Assigning an IPv4 Address to a Gigabit Ethernet Interface

Assigning IPv6 Addresses to Interfaces

Creating a Message-of-the-Day Banner

Creating a Login Banner

Mapping a Local Host Name to a Remote IP Address

Table of Contents

The no ip domain-lookup Command

Working with DNS on a Router

The logging synchronous Command

The exec-timeout Command

Saving Configurations

Erasing Configurations

The write Command

Verifying Your Configurations Using show Commands

EXEC Commands in Configuration Mode: The do Command

Configuration Example: Basic Router Configuration

Boston Router

CHAPTER 15 Static Routing

Configuring an IPv4 Static Route

Static Routes and Recursive Lookups

The permanent Keyword

Floating Static Routes in IPv4 and Administrative Distance

Configuring an IPv4 Default Route

Verifying IPv4 Static Routes

Configuration Example: IPv4 Static Routes

Ketchikan Router

Juneau Router

Sitka Router

Configuring an IPv6 Static Route

Floating Static Routes in IPv6

Configuring an IPv6 Default Route

Verifying IPv6 Static Routes

CHAPTER 16 Open Shortest Path First (OSPF)

OSPFv2 Versus OSPFv3

Configuring OSPF

Table of Contents

Using Wildcard Masks with OSPF Areas
Loopback Interfaces
Router ID
DR/BDR Elections
Timers
Verifying OSPFv2 Configurations
Troubleshooting OSPFv2
Configuration Example: Single-Area OSPF
Austin Router
Houston Router
Galveston Router

Part IV: IP Services

CHAPTER 17 DHCP

Configuring a DHCP Server on an IOS Router
Using Cisco IP Phones with a DHCP Server
Verifying and Troubleshooting DHCP Configuration
Configuring a DHCP Helper Address
Configuring a DHCP Client on a Cisco IOS Software Ethernet
Interface
Configuration Example: DHCP
Edmonton Router
Gibbons Router

CHAPTER 18 Network Address Translation (NAT)

Private IP Addresses: RFC 1918
Configuring Dynamic NAT: One Private to One Public Address
Translation
Configuring PAT: Many Private to One Public Address
Translation
Configuring Static NAT: One Private to One Permanent Public

Table of Contents

Address Translation

Verifying NAT and PAT Configurations

Troubleshooting NAT and PAT Configurations

Configuration Example: PAT

ISP Router

Company Router

CHAPTER 19 Configuring Network Time Protocol (NTP)

NTP Configuration

NTP Design

Securing NTP

Enabling NTP Authentication

Limiting NTP Access with Access Lists

Verifying and Troubleshooting NTP

Setting the Clock on a Router

Using Time Stamps

Configuration Example: NTP

Core1 Router

Core2 Router

DLSwitch1

DLSwitch2

ALSwitch1

ALSwitch2

Part V: Security Fundamentals

CHAPTER 20 Layer Two Security Features

Setting Passwords on a Switch

Configuring Static MAC Addresses

Configuring Switch Port Security

Configuring Sticky MAC Addresses

Verifying Switch Port Security

Recovering Automatically from Error-Disabled Ports

Table of Contents

Verifying Autorecovery of Error-Disabled Ports

Configuring DHCP Snooping

Verifying DHCP Snooping

Configuring Dynamic ARP Inspection (DAI)

Verifying Dynamic ARP Inspection

Configuration Example: Switch Security

CHAPTER 21 Managing Traffic Using Access Control Lists (ACLs)

Access List Numbers

Using Wildcard Masks

ACL Keywords

Creating Standard ACLs

Applying Standard ACLs to an Interface

Verifying ACLs

Removing ACLs

Creating Extended ACLs

Applying Extended ACLs to an Interface

The established Keyword

The log Keyword

Creating Named ACLs

Using Sequence Numbers in Named ACLs

Removing Specific Lines in Named ACLs Using Sequence Numbers

Sequence Number Tips

Including Comments About Entries in ACLs

Restricting Virtual Terminal Access

Tips for Configuring ACLs

IPv6 ACLs

Verifying IPv6 ACLs

Configuration Examples: IPv4 ACLs

Table of Contents

Configuration Examples: IPv6 ACLs

CHAPTER 22 Device Monitoring and Hardening

Device Monitoring

Configuration Backups

Implementing Logging

Configuring Syslog

Syslog Message Format

Syslog Severity Levels

Syslog Message Example

Device Hardening

Configuring Passwords

Password Encryption

Password Encryption Algorithm Types

Configuring SSH

Verifying SSH

Restricting Virtual Terminal Access

Disabling Unneeded Services

Part VI: Wireless Technologies

CHAPTER 23 Configuring and Securing a WLAN AP

Initial Setup of a Wireless LAN Controller (WLC)

Monitoring the WLC

Configuring a VLAN (Dynamic) Interface

Configuring a DHCP Scope

Configuring a WLAN

Defining a RADIUS Server

Exploring Management Options

Configuring a WLAN Using WPA2 PSK

Part VII: Appendices

APPENDIX A: How to Count in Decimal, Binary, and

Table of Contents

Hexadecimal

How to Count in Decimal

How to Count in Binary

How to Count in Hexadecimal

Representing Decimal, Binary, and Hexadecimal Numbers

APPENDIX B: How to Convert Between Number Systems

How to Convert from Decimal to Binary

How to Convert from Binary to Decimal

How to Convert from Decimal IP Addresses to Binary and from
Binary IP Addresses to Decimal

A Bit of Perspective

How to Convert from Hexadecimal to Binary

How to Convert from Binary to Hexadecimal

How to Convert from Decimal to Hexadecimal

How to Convert from Hexadecimal to Decimal

APPENDIX C: Binary/Hex/Decimal Conversion Chart

APPENDIX D: Create Your Own Journal Here
