Semiconductors

Subvolume a : Physics of group IV elements and III–V compounds

(edited by O. MADELUNG)

		Figures
A Introduction	1	–
1 General remarks on the contents and the structure of subvolumes 17a–17e	1	–
2 Semiconductor properties, their definition and methods for their determination	3	–
2.1 Basic properties of semiconductors	3	–
2.1.1 Band structure parameters	3	–
2.1.2 Lattice parameters	6	–
2.1.3 Carrier concentrations and mobilities	7	–
2.2 Experimental methods useful for the determination of semiconductor properties	8	–
2.2.1 Transport measurements	8	–
2.2.2 Optical measurements	10	–
2.3 Impurities and defects	16	–
2.3.1 Shallow and deep states	16	–
2.3.2 Bound excitons	18	–
2.3.3 Local modes	18	–
2.4 Properties of tetrahedrally bonded semiconductors	19	349
2.4.1 Band structure	19	349 ff.
2.4.2 Transport and optical properties	24	–
2.4.3 Lattice parameters	25	–
3 Frequently used symbols, abbreviations, conversion tables	26	–
B Physical data of semiconductors I	Data	Figures
1 Elements of the IVth group and IV–IV compounds	33	–
1.0 Structure, chemical bond	33	349
1.0.1 Normal pressure and high pressure phases of group IV elements	34	351 ff.
1.0.2 References for 1.0	33	–
1.1 Diamond (C)	36	349, 351, 358
1.1.1 Electronic properties	36	349, 352 ff.
1.1.2 Impurities and defects	37	353
1.1.3 Lattice properties	38	349, 353 ff.
1.1.4 Transport properties	39	355
1.1.5 Optical properties	39	356 ff.
1.1.6 Further properties	40	356 ff.
1.1.7 References for 1.1	41	–
1.2 Silicon (Si)	43	–
1.2.1 Electronic properties	43	349, 359 ff., 396
1.2.2 Impurities and defects	48	362 ff.
1.2.3 Lattice properties	61	349, 369 ff.
1.2.4 Transport properties	66	373 ff.
1.2.5 Optical properties	70	386 ff.
1.2.6 Further properties	76	395, 397 ff.
1.2.7 References for 1.2	77	–

	Data	Figures
1.3 Germanium (Ge)	87	-
1.3.1 Electronic properties	87	349 ff., 400 ff.
1.3.2 Impurities and defects	94	406 ff.
1.3.3 Lattice properties	103	410 ff.
1.3.4 Transport properties	107	413 ff., 417
1.3.5 Optical properties	113	389, 396, 405, 426 ff.
1.3.6 Further properties	119	432 ff., 602
1.3.7 References for 1.3	120	-
1.4 Grey tin (α -Sn)	127	-
1.4.1 Electronic properties	127	349, 434 ff.
1.4.2 Impurities and defects	129	-
1.4.3 Lattice properties	129	349, 435 ff.
1.4.4 Transport properties	130	435 ff.
1.4.5,6 Optical and further properties	131	435, 439 ff.
1.4.7 References for 1.4	131	-
1.5 Silicon carbide (SiC)	132	442
1.5.1 Electronic properties	133	349 ff., 443 ff.
1.5.2 Impurities and defects	135	444 ff.
1.5.3 Lattice properties	136	349, 445 ff.
1.5.4 Transport properties	137	446 ff.
1.5.5 Optical properties	138	447 ff.
1.5.6 Further properties	140	449
1.5.7 References for 1.5	141	-
1.6 $\text{Si}_x\text{Ge}_{1-x}$	142	449 ff.
References for 1.6	143	-
2 III-V compounds	144	-
2.0 Structure, chemical bond	144	349, 454 ff.
2.0.1 Properties of high pressure phases of III-V compounds	145	456 ff.
2.0.2 References for 2.0	147	-
2.1. Boron nitride (BN)	148	-
2.1.A Cubic boron nitride	148	-
2.1.A.1 Electronic properties	148	349, 460
2.1.A.3 Lattice properties	148	460
2.1.A.4 Transport properties	148	461
2.1.A.5 Optical properties	149	460 ff.
2.1.A.6 Further properties	149	461
2.1.B Hexagonal boron nitride	150	461
2.1.B.1 Electronic properties	150	462
2.1.B.3 Lattice properties	150	462
2.1.B.5 Optical properties	150	462 ff.
2.1.B.6 Further properties	151	463 ff.
2.1.C Wurtzite-type boron nitride	152	-
2.1.7 References for 2.1	152	-
2.2 Boron phosphide (BP)	153	-
2.2.1 Electronic properties	153	349, 464
2.2.2 Impurities and defects	153	465
2.2.3 Lattice properties	153	465
2.2.4 Transport properties	154	465 ff.
2.2.5 Optical properties	155	465, 467, 510
2.2.6 Further properties	155	467
2.2.7 References for 2.2	156	-
2.3 Boron arsenide (BAs)	156	349, 468 ff.
References for 2.3	157	-

	Data	Figures
2.4 Aluminum nitride (AlN)	.158	-
2.4.1 Electronic properties	.158	350, 462, 468 ff.
2.4.3 Lattice properties	.158	470 ff.
2.4.4 Transport properties	.159	471
2.4.5 Optical properties	.159	462, 469 ff.
2.4.6 Further properties	.160	472
2.4.7 References for 2.4	.160	-
2.5 Aluminum phosphide (AlP)	.161	-
2.5.1 Electronic properties	.161	349, 473 ff.
2.5.2 Impurities and defects	.162	-
2.5.3 Lattice properties	.162	474
2.5.4 Transport properties	.162	474 ff.
2.5.5 Optical properties	.163	473 ff., 510
2.5.6 Further properties	.163	476
2.5.7 References for 2.5	.164	-
2.6 Aluminum arsenide (AlAs)	.164	-
2.6.1 Electronic properties	.164	349, 473, 476 ff.
2.6.2 Impurities and defects	.166	-
2.6.3 Lattice properties	.166	477 ff.
2.6.4 Transport properties	.166	478
2.6.5 Optical properties	.167	475 ff., 479, 544
2.6.6 Further properties	.167	476
2.6.7 References for 2.6	.168	-
2.7 Aluminum antimonide (AlSb)	.169	-
2.7.1 Electronic properties	.169	349, 479 ff.
2.7.2 Impurities and defects	.171	-
2.7.3 Lattice properties	.171	349, 481
2.7.4 Transport properties	.172	482 ff.
2.7.5 Optical properties	.174	480 ff., 484 ff.
2.7.6 Further properties	.175	486 ff.
2.7.7 References for 2.7	.176	-
2.8 Gallium nitride (GaN)	.178	-
2.8.1 Electronic properties	.178	350, 387 ff.
2.8.2 Impurities and defects	.179	489 ff.
2.8.3 Lattice properties	.181	490 ff.
2.8.4 Transport properties	.181	491 ff.
2.8.5 Optical properties	.182	462, 487 ff., 490, 493
2.8.6 Further properties	.183	493 ff.
2.8.7 References for 2.8	.184	-
2.9 Gallium phosphide (GaP)	.185	-
2.9.1 Electronic properties	.185	349 ff., 494 ff.
2.9.2 Impurities and defects	.189	498 ff.
2.9.3 Lattice properties	.204	349, 504 ff.
2.9.4 Transport properties	.207	506 ff.
2.9.5 Optical properties	.208	389, 430, 486, 496 ff., 508 ff.
2.9.6 Further properties	.211	486, 511
2.9.7 References for 2.9	.212	-
2.10 Gallium arsenide (GaAs)	.218	-
2.10.1 Electronic properties	.218	349, 512 ff.
2.10.2 Impurities and defects	.224	518 ff.
2.10.3 Lattice properties	.234	349, 527 ff.
2.10.4 Transport properties	.236	529 ff.
2.10.5 Optical properties	.242	389, 430, 486, 510, 514, 538 ff.
2.10.6 Further properties	.247	389, 543
2.10.7 References for 2.10	.248	-

	Data	Figures
2.11 Gallium antimonide (GaSb)	.258	–
2.11.1 Electronic properties	.258	349, 546 ff.
2.11.2 Impurities and defects	.263	548 ff.
2.11.3 Lattice properties	.264	349, 550 ff.
2.11.4 Transport properties	.266	551 ff.
2.11.5 Optical properties	.271	486, 556 ff.
2.11.6 Further properties	.274	398, 486, 557
2.11.7 References for 2.11	.274	–
2.12 Indium nitride (InN)	.278	472, 558
References for 2.12	.280	–
2.13 Indium phosphide (InP)	.281	–
2.13.1 Electronic properties	.281	349, 559 ff.
2.13.2 Impurities and defects	.284	561 ff.
2.13.3 Lattice properties	.287	349, 564 ff.
2.13.4 Transport properties	.288	565 ff.
2.13.5 Optical properties	.290	510, 570
2.13.6 Further properties	.292	571 ff.
2.13.7 References for 2.13	.293	–
2.14 Indium arsenide (InAs)	.297	–
2.14.1 Electronic properties	.297	349, 572 ff.
2.14.2 Impurities and defects	.300	–
2.14.3 Lattice properties	.300	349, 510, 574 ff.
2.14.4 Transport properties	.301	575 ff.
2.14.5 Optical properties	.303	540, 571, 573, 575, 581 ff.
2.14.6 Further properties	.306	398, 584
2.14.7 References for 2.14	.307	–
2.15 Indium antimonide (InSb)	.310	–
2.15.1 Electronic properties	.310	349, 584 ff.
2.15.2 Impurities and defects	.314	588
2.15.3 Lattice properties	.315	349, 550, 588 ff.
2.15.4 Transport properties	.318	579, 590 ff.
2.15.5 Optical properties	.323	389, 540, 570, 583, 585, 587, 600 ff.
2.15.6 Further properties	.326	398, 601 ff.
2.15.7 References for 2.15	.327	–
2.16 Solid solutions between III–V compounds and with other semiconductors	.333	603 ff.
References for 2.16	.342	–
