1	Introduction (Review of Literature)	1
1.1	Preliminary Remarks	1
1.2	General Mechanisms for the Regulation of the Morphology of Bone Tissue	3
1.3	Morphology of the Subchondral Bone	5
1.3.1	Definition of the Term "Subchondral Bone"	5
1.3.2	Structure of Normal Subchondral Bone	6
1.3.2.1	Architecture	6
1.3.2.2	Vascularity of the Subchondral Bone Plate	7
1.3.2.3	Thickness of the Subchondral Bone Plate	9
1.3.2.4	Density Distribution in the Subchondral Plate	9
1.3.3	Structure of Pathologically Altered Subchondral Bone	10
1.3.3.1	In Osteoarthritis (OA)	10
1.3.3.2	In Chondromalacia Patellae	13
1.3.4	Mechanical Properties of the Subchondral Bone Plate in Normal and Pathological Conditions	14
1.3.4.1	Strength of Subchondral Bone	14
1.3.4.2	Stiffness of the Subchondral Bone Plate	16
1.3.4.3	Energy Absorption Capacity of the Subchondral Bone Plate	17
1.3.4.4	Hardness of the Subchondral Bone Plate	18
1.3.5	Correlation Between Structural Parameters and Mechanical Properties	18
1.4	Function of the Subchondral Bone Plate	20
1.5	Possible Pathomechanisms Leading to Osteoarthritic Changes	21
1.5.1	Is Osteoarthritis a "Final Common Pathway"?	22
1.6	Factors Regulating the Remodeling of the Subchondral Bone	24
1.7	The Aims of this Investigation	27

2	Materials.....	29
2.1	Material for the Validation of CT-OAM	29
2.2	Materials Used for CT-OAM.....	31
2.2.1	Spine Samples.....	31
2.2.2	Shoulder Joint Samples.....	31
2.2.3	Elbow Joint Samples	31
2.2.4	Radiocarpal Joint Samples	31
2.2.5	Hip Joint Samples	32
2.2.6	Femorotibial Joint Samples	32
2.2.7	Animal Studies of the Femorotibial Joint	32
2.2.8	Femoropatellar Joint Samples	32
2.2.9	Ankle Joint Samples.....	32
3	Methods	33
3.1	X-ray Densitometry	33
3.2	CT OAM Used to Demonstrate the Patterns of Subchondral Mineralization in the Living Subject....	33
3.2.1	CT OAM With a Radiotherapy Planning Computer.....	33
3.2.2	CT OAM With an X-Ray Computer Tomograph ..	34
3.2.3	CT OAM Processed by Means of the Software ANALYZE	36
3.3	The Production of Secondary Sections	38
3.4	Dual-energy QCT with basis material decomposition ...	38
3.5	Methods of Achieving Standardized Evaluation and Quantification of the Mineralization Patterns	38
3.5.1	Localization and Displacement of the Maxima ..	38
3.5.2	Degree of Mineralization	40
3.5.3	Extent of Changes in Depth	40
4	Validation of CT OAM	41
	M. MÜLLER-GERBL, N. HODAPP	
4.1	Comparison with Conventional Procedures	41
4.1.1	The Physical Background to the Assessment of the Mineral Content of Bone Tissue by Means of the X-Ray Densitometry of Thin Sections and Using CT or DEQCT	41
4.1.2	The Basis of X-Ray Densitometry.....	43
4.1.3	The Basis of CT OAM	43
4.1.4	Conventional X-Ray Densitometry as Applied to Physical Sections Compared with CT OAM ..	44
4.1.4.1	First Model (Two Component Model)	46
4.1.4.2	Second Model (Four Component Model)	46

4.2	Dependence of the Absorption Value on the Calcium Concentration	54
4.2.1	Fundamentals of Dual Energy Quantitative Computed Tomography (DEQCT) with Basis Material Decomposition.....	54
4.2.1.1	Selective Measurement and Imaging of Substances.....	56
4.2.1.2	Calibration of Values Against a Standard Phantom Bone	57
4.2.2	Comparison of the Hounsfield and Calcium Values	58
4.3	The Use of CT OAM in Connection With Sections Cut at Other Angles.....	60
5	Mineralization Patterns in Healthy Subjects.....	65
5.1	Vertebral Column (Lumbar Region)	65
5.2	Shoulder Joint	66
5.2.1	Control Group.....	66
5.2.2	Mineralization Patterns of Athletes.....	68
5.2.3	Mineralization Patterns in Cases of Unreduced Traumatic Dislocation of the Shoulder Joint	68
5.3	Elbow Joint	68
5.4	Radiocarpal Joint.....	70
5.5	Hip Joint	70
5.6	Femorotibial Joint.....	72
5.7	Femoropatellar Joint.....	74
5.8	Ankle Joint	74
6	Pathological Mineralization Patterns	77
6.1	Vertebral Column	77
6.1.1	Low-Grade Scoliosis.....	77
6.2	Shoulder Joint	77
6.2.1	Comparison Between Individuals with Healthy and Diseased Shoulders.....	77
6.3	Radiocarpal Joint.....	79
6.3.1	Healed Defective Repositioning of a Distal Fracture of the Radius	79
6.3.2	Kienböck's Disease (Avascular Necrosis of the Lunate).....	79
6.4	Hip Joint	79
6.4.1	Dysplasia of the Hip.....	79
6.5	Femorotibial Joint.....	80

6.5.1	Patterns in Patients with Malalignment of the Knee Joint.	80
6.5.2	Patterns Found in Patients with Genu Varum After a Correction Osteotomy	80
6.5.3	Patterns Following Reconstruction of the Anterior Cruciate Ligament with a Patellar Tendon Transplant (Sheep)....	83
6.5.4	Patterns After Medial Meniscectomy (Sheep) ..	83
6.5.5	Patterns After Primary Replacement of the Meniscus by an Autogenous Graft of the Patellar Tendon Covered with a Layer of Fascia Lata	83
6.6	Femoropatellar Joint	89
6.6.1	Patients with Retropatellar Pain	89
7	Factors Influencing the Development of Normal Patterns of Mineralization	91
7.1	The Shape of the Joint Surfaces	92
7.1.1	Spherical and Hinge Joints	92
7.1.2	Nonspherical Joints.....	95
7.2	The Magnitude of the Joint Reaction Force	97
7.3	Position and Extent of the Contact Surfaces	99
7.4	Penetration Point of the Joint Reaction Force.....	100
7.5	Changes in the Mineralization Patterns with Age.....	101
8	Factors Influencing the Development of Pathological Patterns of Mineralization	103
8.1	Abnormal Geometrical Relationships.....	103
8.2	Changes in the Magnitude of the Joint Reaction Force .	104
8.3	Changes in Size and Position of the Contact Surfaces ..	104
8.4	Changes in the Penetration Point of the Joint Reaction Force	105
8.5	The Temporal Course of the Changes.....	107
9	Possible Clinical Application of CT OAM	109
9.1	Basic Clinical Research	109
9.2	Diagnosis	111
9.3	Following the Progress of Treatment	112
10	Summary	115
