## Preface

## Chapter 1: Bio-Based Polymers and Composites

|                                                                                                                                                                                                                                                   |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Study of the Potential Employment of Malvaceae Species in Composites Materials</b><br>B.M.G. Guimarães, D. Cayuela Marín, W.F. Zonatti, W. Mantovani, C. Relvas, F. Cunha, R. Figueiro, H. Savastano and J. Baruque-Ramos                      | 3   |
| <b>Smart and Sustainable Materials for Military Applications Based on Natural Fibres and Silver Nanoparticles</b><br>D.P. Ferreira, S.M. Costa, H. Felgueiras and R. Figueiro                                                                     | 14  |
| <b>Potential for Use of Veneer-Based Multi-Material Systems in Vehicle Structures</b><br>D.B. Käse, G. Piazza, E. Beeh, H.E. Friedrich, D. Kohl, H. Nguyen, D. Berthold and C. Burgold                                                            | 23  |
| <b>Preliminary Investigation on Improving Biopolymer Properties Using Nanocellulose from Tropical Forest Species</b><br>S. Adnan, T. Khadiran, L. Jasmani and R. Rusli                                                                            | 29  |
| <b>Use of Simulation to Enhance the Performance of Sustainable Bio-Based Polyurethane Fome</b><br>R.M. Raouf, H.A. Abdalgane and R.S. Al-Jadiri                                                                                                   | 35  |
| <b>Recent Advances in Bio-Based Sustainable Aliphatic and Aromatic Epoxy Resins for Composite Applications</b><br>S. Sathiyaraj and K. Sekar                                                                                                      | 42  |
| <b>Tensile Properties of Unidirectional Kenaf Polypropylene Composite at Various Temperatures and Orientations</b><br>D. Tholibon, A.B. Sulong, N. Muhamad, I. Tharazi, N.F. Ismail and D.A. Tholibon                                             | 53  |
| <b>Unidirectional Kenaf Polypropylene Composites: Optimization Process by Two Level Full Factorial</b><br>D. Tholibon, A.B. Sulong, N. Muhamad, N.F. Ismail, I. Tharazi and M.K.F. Md Radzi                                                       | 57  |
| <b>Water Sorption of Vegetable Fiber Reinforced Polymer Composites</b><br>L.H. de Carvalho, A.G. Barbosa de Lima, E.L. Canedo, A.F.C. Bezerra, W.S. Cavalcanti and V.A.D. Marinho                                                                 | 61  |
| <b>Experimental Strength of Woven Fabric Kenaf Composite Plates with Different Stacking Sequences</b><br>H. Ahmad and K. Supar                                                                                                                    | 68  |
| <b>Evaluation of the Performance of the Composite Bamboo Yacht Material</b><br>X.D. Huang, S.H. Zhuan, J.K. Huang, C.Y. Hse and T.F. Shupe                                                                                                        | 74  |
| <b>Mechanical Properties of New Sustainable Polymeric Formulations for Rotomoulding Processes</b><br>A. Martínez-García, A. Ibáñez-García and F.J. Varela-Gandía                                                                                  | 84  |
| <b>Sustainable Fabrication Technology of Composite Board by Kenaf-Polypropylene for Automobile Door Interior Applications</b><br>L. Anggraini and A. Anjany                                                                                       | 90  |
| <b>Microstructure of Thermoplastic Composites Reinforced with Wool and Wood</b><br>C. Baptista, G. Martins, C. Santos, A. Mateus and F. Antunes                                                                                                   | 96  |
| <b>Tensile and Flexural Properties of Untreated Sisal Fibers Reinforced Unsaturated Polyester Resin Composites</b><br>S.C.C. de Souza, I.C.B. Vieira, I.F. Barbosa, N.F.T.G. Leão, A.C.B. Zancanella, R. Maziero, B.D. de Castro and J.C.C. Rubio | 111 |
| <b>Optimal Use of Industrial Hemp for PLA Biocomposite and LLDPE Composite Reinforcement</b><br>A. Smoca and Z. Zelca                                                                                                                             | 117 |
| <b>Development of Plywood Binder by Partial Replacement of Phenol-Formaldehyde Resins with Birch Outer Bark Components</b><br>A. Paze, J. Rizhikovs, D. Godiņa, R. Makars and R. Berzins                                                          | 125 |
| <b>Study of an Appropriate Suberinic Acids Binder for Manufacturing of Plywood</b><br>A. Paze and J. Rizhikovs                                                                                                                                    | 131 |

|                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Short Review: Potential Production of Acacia Wood and its Biocomposites</b><br>M.K. bin Bakri, E. Jayamani, K.H. Soon and A. Kakar | 136 |
|---------------------------------------------------------------------------------------------------------------------------------------|-----|

## Chapter 2: Materials for Energy Storage and Conversion Technologies

|                                                                                                                                                                                                                                            |     |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Effect of Particle Size on the Physical Properties of Activated Palm Kernel Shell for Supercapacitor Application</b><br>R.T. Ayinla, J.O. Dennis, H.B.M. Zaid, F. Usman and A. Yar                                                      | 143 |
| <b>Optimization of Dye Extraction from Purple Cabbage and Cordyline Fruticosa in Dye-Sensitized Solar Cell</b><br>A.K. Rosli, S. Suhaimi, M.A. Hashim@Ismail, N.M. Yatim and N. Hamid                                                      | 148 |
| <b>Carbon Nanosheet Frameworks Derived from Pine Cone Shells as Sodium-Ion Battery Anodes</b><br>F.Y. Hu, S.Y. Liu, J.Y. Wang, S.M. Li and X.G. Jian                                                                                       | 157 |
| <b>Hydrothermal Synthesis of Binder-Free Kapok (<i>Ceiba pentandra</i>) Fiber Paper-NiCo<sub>2</sub>O<sub>4</sub> Supercapacitor Electrode</b><br>K.C. Fermano and M.D.L. Balela                                                           | 166 |
| <b>The Interconnected Open-Channel Highly Porous Carbon Material Derived from Pineapple Leaf Fibers as a Sustainable Electrode Material for Electrochemical Energy Storage Devices</b><br>S. Kingsakklang, S. Roddechach and M. Sriariyana | 172 |

## Chapter 3: Organic Corrosion Inhibitors, Coatings and Lubricants

|                                                                                                                                                                                                                 |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Austenitic 316L Stainless Steel; Corrosion and Organic Inhibitor: A Review</b><br>M.A. Fajobi, R.T. Loto and O.O. Oluwole                                                                                    | 183 |
| <b>Comparison of the Protection Performance of Calciofon and Rosmarinus Officinalis on Low Carbon Steel Corrosion in Petrochemical Drilling Fluid</b><br>R.T. Loto                                              | 190 |
| <b>The Synthesis and Surface Properties of Newly Eco-Resin Based Coconut Oil for Superhydrophobic Coating</b><br>N. Marsi, A.Z.M. Rus, I. Mohd Razali, S.A. Samsuddin and A.H. Abdul Rashid                     | 198 |
| <b>Tribological Evaluation on Various Formulation of Modified RBD Palm Olein as Sustainable Metalworking Fluids for Machining Process</b><br>E.A. Rahim, N. Talib, A.S. Abdul Sani, S. Syahrullail and Z. Mohid | 203 |

## Chapter 4: Materials Based on Organic Waste

|                                                                                                                                                                                                                       |     |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Grass Waste Derived Cellulose Nanocrystals as Nanofiller in Polyvinyl Alcohol Composite Film for Packaging Application</b><br>D. Wan Hazman, R.M. Taib, M.A.A. Samah and Z.A. Majid                                | 211 |
| <b>Design and Research of Eco-Friendly Polymer Composites</b><br>V. Lebedev, T. Tykhomyrova, I. Litvinenko, S. Avina and Z. Saimbetova                                                                                | 219 |
| <b>Can European Sea Bass (<i>Dicentrarchus labrax</i>) Scale Be a Good Candidate for Nano-Bioceramics Production?</b><br>Y.M. Sahin, O. Gunduz, A. Fical, N. Ekren, A. Tuna, A.T. Inan and F.N. Oktar                 | 227 |
| <b>The Influence of Mechanical and Mechanochemical Activation of Hardwood Wood Waste on Biocomposite Properties</b><br>J. Jaunslavietis, G. Shulga, J. Ozolins, B. Neiberte, A. Verovkins, S. Vitolina and V. Shakels | 233 |
| <b>Synthesis of Sustainable and High Purity of Quicklime Derived from Calcination of Eggshell Waste in a Laboratory-Scale Rotary Furnace</b><br>S. Chuakham, A. Putkham, A.I. Putkham and S. Kanokwan                 | 238 |

## Chapter 5: Materials Based on Inorganic Waste

|                                                                                                                     |     |
|---------------------------------------------------------------------------------------------------------------------|-----|
| <b>Utilization of Fly Ash in the Synthesis of Refractory Forsterite-Spinel Ceramics</b><br>M. Nguyen and R. Sokolaj | 249 |
|---------------------------------------------------------------------------------------------------------------------|-----|

|                                                                                                                                                                                                    |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Preparation of SiO<sub>2</sub>-Na<sub>2</sub>O-CaO-P<sub>2</sub>O<sub>5</sub> Glass-Ceramic from Waste Materials and Heat Treatment Effects on its Morphology</b>                               |     |
| N.F.B. Pallan, K.A. Matori, M. Hashim, W.F. Lim, H.J. Quah, A.N. Fauzana, N. Rosnah, M.Z.A. Khiri, S. Farhana, N. Zainuddin, N.A. Zarifah, M. Nurzilla, M.Z.M. Hafiz, C.W. Loy and M.I.M. Zamratul | 259 |
| <b>Influence of Fly Ash Addition in the Raw Mixture on Synthesis and Properties of Forsterite</b>                                                                                                  |     |
| M. Nguyen and R. Sokolař                                                                                                                                                                           | 263 |
| <b>Development of Composite Using Recycled PET Reinforced with Fiberglass Powder, Sawdust and Gypsum</b>                                                                                           |     |
| A. Mathu, S.A. Asif, K. Chandra, S. Motru, D. Patel and R. Syed                                                                                                                                    | 269 |
| <b>Novel Bio-Based Composites Panels from TetraPak Waste</b>                                                                                                                                       |     |
| A. Hassanin and Z. Candan                                                                                                                                                                          | 275 |
| <b>A Study on Acoustic Property of Composites from Waste Tyres</b>                                                                                                                                 |     |
| B.P. Jena, A. Jagdev, B.B. Nayak and S. Satapathy                                                                                                                                                  | 280 |
| <b>Novel Sustainable Composites with Geopolymeric Steel Slag and Recycled from Packing PET</b>                                                                                                     |     |
| E.M. Santos, A.V. Gomes, F.J.H.T.V. Ramos and S.N. Monteiro                                                                                                                                        | 288 |
| <b>Synthesis of Spinel Color Pigments from Aluminum Dross Waste</b>                                                                                                                                |     |
| N. Yongvanich, B. Emtip, B. Hengprayoon and E. Jankat                                                                                                                                              | 294 |
| <b>Effect of Borax on Lightweight Material from Cullet and Fly Ash</b>                                                                                                                             |     |
| S. Sriprasertsuk, P. Suwannason and W.T. Saengchantara                                                                                                                                             | 300 |
