

Table of Contents

Perturbation Theory of Effective Hamiltonians B.H. Brandow.	1
Folded Diagram Theory, Time-Dependent Approach of Johnson and Baranger M.B. Johnson.	25
A Time-Dependent, Diagrammatic Analysis of Effective Interactions and Operators K.F. Ratcliff	42
Determination of Effective Matrix Elements from Experimental Data I. Talmi.	64
How Do We Decide Which Unperturbed Basis to Use ? What is the Role of Self-Consistency ? P.U. Sauer	80
Computation of the Reaction Matrix, G R.L. Becker	96
Perturbation Calculation in a Double-Partitioned Hilbert Space B.R. Barrett	119
The Average Effective Interaction P. Goode	134
Algebraic Structure of Effective Interactions and Operators: Convergence Properties of the Perturbation Expansions H.A. Weidenmüller	152
Is there an Universal Relationship Connecting All Two-Body Effective Interactions ? J.P. Schiffer	168
Relevant Aspects of Statistical Spectroscopy J.B. French	191
Infinite Partial Summations D.W.L. Sprung	207

Padé Approximants and the Calculation of Effective Interactions	
T.H. Schucan	.228
Shell-Model Diagonalizations in an Expanded Space	
D.J. Rowe	.250
Density Dependent Interactions	
J.W. Negele	.270
Calculation of Other Effective Operators	
P.J. Ellis	.296
Theory Versus Theory as a Test of the Effective Interaction	
L. Zamick	.313
Summary Talk: Where do We Stand at the Present Time Regarding the Microscopic Theory of Effective Interactions and Operators ?	
M.W. Kirson	.330
