

Contents

1	Introduction	1
1.1	Structure of the Book	2
1.2	History of the Discipline Technical Reliability	5
2	Technical Reliability and Product Emergence Process	9
2.1	Product Emergence Process and Product Life Cycle	9
2.1.1	Basic Features of the Product Emergence Process	9
2.1.2	Concept and Series Development Phases	11
2.1.3	Production and Distribution Phases	13
2.2	Technical Reliability in the Product Emergence Process	15
2.2.1	Use of Technical Reliability Methods	15
2.2.2	Risk Elimination and Risk Prevention	18
3	Elementary Terms	21
3.1	Statistics and Specification	21
3.2	Product and Process Characteristics and Their Specificity	24
3.3	Technical Reliability and Maintenance	28
3.3.1	Technical Reliability According to Bitter and DIN	28
3.3.2	Discussion of the Definition of Reliability According to Bitter and DIN	30
3.3.3	Definition of Technical Reliability	31
3.3.4	Technical Reliability and Failure Behaviour	32
3.3.5	Data, Damage Data, Product Fleet and Censoring	33
3.3.6	Key Indicators	34
3.3.7	Maintenance and Quality	35
3.4	Measuring and Testing	36
3.5	Risk and Risk Analysis	39
4	Descriptive Statistics: Forms of Visualization	43
4.1	Introduction and Case Study Engine Connecting Rod	43
4.2	Value Pattern	45
4.3	Bar Diagram	46
4.4	Histogram	47
4.5	Cumulative Diagram	48

4.6	Mathematical Papers: Log Representations	49
4.6.1	Logarithmic paper	49
4.6.2	Weibull Probability Paper	50
4.7	Boxplot.	52
4.8	Isochrone Diagram.	54
4.9	X–Y Plot	58
5	Probability and Random Experiments	61
5.1	Probability	61
5.2	Probabilistics	68
5.3	Examples for Probabilistics	71
5.3.1	Sampling Inspection in the Incoming Inspection.	71
5.3.2	Urn Model: The Ball Drawing	72
5.3.3	The Monty Hall Problem (Goat Problem)	75
6	Data Collection and First Analysis Steps	79
6.1	Sample	79
6.2	Data Classification	80
6.3	Estimation Methods for Unknown Parameters	
	Mean and Dispersion of a Distribution	83
6.3.1	Estimators.	84
6.3.2	Estimators and Estimates for Mean M and Variance σ^2	85
6.3.3	Estimation Function and Estimation of the Proportion Value p	86
6.4	Basic Estimators and Characteristics of a Sample.	87
6.4.1	Case Study Engine Connecting Rod: Characteristic Description, Characteristic Values of a Sample	87
6.4.2	Estimator for the Mean Value Based on a Sample.	88
6.4.3	Estimator for the Dispersion Based on a Sample.	89
6.4.4	Mean, Dispersion and Skewness of a Measured Value Series	90
7	Distribution Models and Functions	93
7.1	Fundamentals of a Distribution Model	93
7.2	Continuous Distribution Models	94
7.2.1	Basics and Fields of Application	94
7.2.2	Normal Distribution	96
7.2.3	Standard Normal Distribution and Application	99
7.2.4	Folded Normal Distribution	104
7.2.5	Rayleigh Distribution.	106
7.2.6	Logarithmic Normal Distribution	107
7.2.7	Weibull Distribution	109
7.2.8	Exponential Distribution	111
7.2.9	Uniform Distribution	112
7.2.10	Gamma Distribution.	114

7.2.11	Erlang Distribution	115
7.2.12	Extreme Value Distribution Models	117
7.2.13	Distribution Model and Technical Reliability Analysis	119
7.3	Test Distributions	121
7.3.1	t-Distribution According to Gosset (Respectively Student)	121
7.3.2	χ^2 -Distribution	123
7.3.3	Fisher's F-Distribution	125
7.4	Discrete Distribution Models	126
7.4.1	Basics	127
7.4.2	Binomial Distribution	128
7.4.3	Poisson Distribution	132
7.4.4	Hypergeometric Distribution	135
7.5	Growth Process and Saturation Function	137
7.5.1	Logistic Function	137
7.5.2	Application Example Verhulst Model: Corrosion Process	139
7.6	Mixed Distribution Models	140
7.6.1	Alternative Models	141
7.6.2	Competing Models	143
8	Distribution Models: Parameter Estimation	145
8.1	Regression Analysis	146
8.2	Maximum Likelihood Estimation Method (Fisher)	147
8.3	Special Parameter Estimators with Reference to Specific Distribution Models	150
8.3.1	Dubey	150
8.3.2	Gumbel	152
8.3.3	Tintner and Rhodes	153
9	Confidence Intervals	155
9.1	Introduction Confidence Interval	155
9.2	Confidence Intervals for Estimators with Normally Distributed Population	157
9.2.1	Confidence Interval for Unknown Mean with Known Variance	157
9.2.2	Confidence Interval for Unknown Mean with Unknown Variance	160
9.2.3	Confidence Interval for Unknown Variance	161
9.2.4	Application Example: Confidence Interval for Mean and Variance	163
9.3	Confidence Interval for Proportion Value with Binomially Distributed Population	167
9.3.1	Approximation via Normal Distribution	167

9.3.2	Application Example: Confidence Interval for a Proportion Value p	170
9.3.3	Approaches Based on Clopper-Pearson and Fisher.	172
9.4	Weibull Distribution Model: Confidence Intervals of Parameters.	175
9.4.1	Shape Parameter.	175
9.4.2	Characteristic Life Span.	175
9.4.3	Threshold (Threshold, Failure-Free Time).	176
9.5	Confidence Interval for a Function (Distribution Model)	177
10	Correlation and Regression	181
10.1	Basics of Correlation and Regression	181
10.2	Correlation Analysis.	182
10.2.1	Correlation According to Bravais-Pearson.	185
10.2.2	Correlation According to Spearman.	185
10.3	Regression Analysis.	186
10.4	Case Studies on Correlation and Regression Analysis.	190
10.5	Spurious Causality and Correlation	196
11	System Analysis: Function, Fault Tree and Failure Mode and Effects	201
11.1	Basics of Function and Fault Tree Analysis.	201
11.1.1	Fault tree: Development and Visualisation.	202
11.1.2	Boolean Algebra.	205
11.1.3	Illustration of System Function and Failure Analysis.	208
11.1.4	Importance Parameters.	212
11.2	Application Examples: Function and Fault Tree Analysis.	213
11.2.1	Braking System of a Motor Vehicle	213
11.2.2	Bridge Circuit.	216
11.2.3	Double Bridge Configuration.	219
11.3	Failure Mode and Effects Analysis (FMEA)	225
12	Analysis of the Failure Behaviour of Components, Assemblies, Systems	231
12.1	Reliability Analysis Based on Damage Data	231
12.1.1	Base of Operations and Overview	232
12.1.2	Data Review	232
12.1.3	Mapping of the Failure Behaviour	233
12.1.4	Key Indicators for the Characterisation of the Failure Behaviour.	235
12.1.5	Confidence Intervals for Parameters, Key Indicators and Model	236
12.1.6	Survival Probability and Failure Rate	237

12.1.7	Interpretation of Key Indicators and Model Parameters	238
12.1.8	Candidate Prognosis.	242
12.2	Case Study: Analysis of Failure Behaviour of a Coolant Pump	243
12.3	Candidate Prognosis in Testing and Field	251
12.3.1	Sudden Death Test and Field Data Analytics.	252
12.3.2	Johnson Ranking	253
12.3.3	Procedure According to Nelson	254
12.3.4	Product Use Profile: Empirical Distribution Function	255
12.3.5	Kaplan and Meier Method	257
12.3.6	Eckel Method	257
12.4	RAPP – Analysis of Serial Damages	258
12.4.1	Risk Analysis and Prognosis of complex Products (RAPP).	259
12.4.2	Case Study RAPP: Damage Focus in a Fleet.	264
12.5	Case Study Sensor: Failure Behaviour; Saturation Model Versus Weibull Model	269
13	Significance Tests.	275
13.1	Introduction and Application Example	275
13.2	Basics of Significance Tests.	278
13.2.1	Performance of Significance Tests, p-Value.	278
13.2.2	Error 1st Kind, Error 2nd Kind and Test Efficiency	280
13.2.3	Dependent and Independent Samples	282
13.2.4	Parametric and Parameter-Free Significance Tests	283
13.2.5	Overview: Statistical Tests for the One, Two, Multiple Sample Case	284
13.3	Single Sample Case	286
13.3.1	Wallis-Moore Test for Randomness.	286
13.3.2	Kolmogorov–Smirnov Test: Test of Goodness of Fit	291
13.3.3	Sign Test: Test for Location Parameters.	296
13.3.4	Test for Outliers Within an Observation Series	302
13.3.5	t-Test: Comparison of Sample Mean Against Reference Value	306
13.3.6	Cox and Stuart Test: Trend Analysis	307
13.4	Two Sample Case.	311
13.4.1	Mann–Whitney U Test: Comparison of Two Centroids	311
13.4.2	Siegel–Tukey Test: Dispersion Comparison.	317
13.4.3	t-Test: Comparison of Two Mean Values.	324
13.4.4	F-Test: Comparison of Two Variances	331

13.5	Multi-Sample Case.	333
13.5.1	Kruskal–Wallis H Test and Conover Post hoc Analysis: Centroids	334
13.5.2	Bartlett-Test: Comparison of Variances	337
13.5.3	Meyer-Bahlburg Test: Comparison of Variances	339
14	Prototype Testing and Accelerated Testing	341
14.1	Accelerated Testing	341
14.2	Quantitative Accelerated Testing: Models	344
14.2.1	Arrhenius Model	344
14.2.2	Wöhler Test and Damage Accumulation Hypotheses	348
14.2.3	Inverse Power Law: Introduction	356
14.2.4	Coffin-Manson Model	357
14.2.5	Inverse Power Weibull Model	357
14.2.6	Lundberg-Palmgren Equation	358
14.2.7	Taylor Equation	359
14.2.8	Eyring Model	360
14.2.9	Power Acceleration Factor	360
14.3	Minimum Test Scope in a Prototype Test	360
14.3.1	Test Scope on the Basis of Survival Probability	361
14.3.2	Test Scope Based on Failure Behaviour and Test Duration	362
14.4	Case Study: Accelerated Testing and Weibull Distribution Model	366
14.4.1	Introduction	366
14.4.2	Accelerated Testing: Example Paper Clip Bending	367
14.5	Qualitative Accelerated Testing: HALT and HASS	372
15	Test Process Suitability	377
15.1	Basics of the Analysis of Measuring and Testing Processes	377
15.2	Test Equipment Capability and Test Process Suitability	381
15.3	Short-Term Test Equipment Capability: C_g -/ C_{gk} -Study	384
15.3.1	Basics of the C_g -/ C_{gk} -Study	384
15.3.2	Application Example C_g -/ C_{gk} -Study: Cylinder Head Testing	386
15.4	Repeatability and Reproducibility: %GRR Study	387
15.4.1	Basics of the %GRR Study	387
15.4.2	Application Example %GRR Study: Engine Piston Rod Testing	389
15.5	Test Process Suitability: Analysis of Measurement Uncertainty (Q_{MS} -/ Q_{MP} -Study)	392
15.5.1	Analysis of the measurement uncertainty	392
15.5.2	Notes on the Analysis of Measurement Uncertainty	396

15.5.3	Application Example Q_{MS}/Q_{MP} -Study: Measurement of Body-in-White	399
15.6	Notes and References: Procedure X	402
16	Statistical Process Control (SPC)	403
16.1	Basics and Definitions	404
16.1.1	Process suitability analyses	406
16.1.2	Inspection Strategy: Full Inspection versus Sampling Inspection Procedure	408
16.2	Planning and Realization of SPC.....	409
16.2.1	Procedure	409
16.2.2	Summary: Scope of Analysis, Indices and Notes	412
16.3	Machine and Process Analysis: Capability Indices	413
16.3.1	Machine Capability and Preliminary Process Capability	413
16.3.2	Process Capability in the Current Series	414
16.3.3	Capability Analysis with Arbitrary Distribution Model: Quantile Approach.....	417
16.3.4	Capability Analysis and Interpretation of Process Images.....	420
16.3.5	Case Study: Capability Analysis of a Machining Process	423
16.4	Multivariate Process Evaluation.....	424
16.4.1	Multivariate Process Capability Index.....	426
16.4.2	Reject Probability Regarding Characteristic Sets	428
16.5	Process Visualization and Control Technology: Control Charts	431
16.5.1	Basics: Structure of Control Charts	432
16.5.2	Control Charts for Continuous Characteristics	435
16.5.3	Case Study Engine Piston Rod: Acceptance and Shewhart Control Charts.....	440
16.5.4	Control Charts for Discrete Characteristics	441
16.5.5	Case Study Grey Cast Iron Component Production: Design of a Control Chart	445
16.5.6	Analysis of Typical Process Scenarios by Means of Control Charts	446
	Appendix	449
	References	493
