|          |  |
|----------|--|
| <b>1</b> | <b>Introduction to recycling and the re-use of rubber — 1</b>                      |
|          | References — 6   |
| <b>2</b> | <b>Brief history of rubber recycling — 9</b>                                       |
|          | References — 11  |
| <b>3</b> | <b>Overview of the world rubber recycling market — 13</b>                          |
|          | References — 19  |
| <b>4</b> | <b>Review of devulcanisation techniques — 21</b>                                   |
| 4.1      | Introduction — 21  |
| 4.2      | Structure of sulfur vulcanised rubber and the properties of sulfur crosslinks — 23 |
| 4.2.1    | Covalent bond energies — 25  |
| 4.2.2    | Stiffness of the covalent bonds — 25   |
| 4.2.3    | Reactivity of the covalent bonds — 26  |
| 4.2.4    | Microbiological attack on the sulfur atoms — 26                                    |
| 4.3      | Thermal devulcanisation processes — 27   |
| 4.3.1    | Background to process — 27   |
| 4.3.2    | Examples of processes and published studies — 28                                   |
| 4.4      | Mechanical devulcanisation processes — 29  |
| 4.4.1    | Background to process — 29   |
| 4.4.2    | Examples of processes and published studies — 30                                   |
| 4.5      | Mechanical devulcanisation in the presence of chemical agents — 36                 |
| 4.5.1    | Background to process — 36   |
| 4.5.2    | Examples of processes and published studies — 38                                   |
| 4.6      | Ultrasonic devulcanisation — 47  |
| 4.6.1    | Background to ultrasonic process — 47  |
| 4.6.2    | Examples of processes and published studies — 48                                   |
| 4.7      | Microwave devulcanisation — 53   |
| 4.7.1    | Background to process — 53   |
| 4.7.2    | Examples of processes and published studies — 54                                   |
| 4.8      | Microbiological devulcanisation — 57   |
| 4.8.1    | Background to process — 57   |

|          |  |            |
|----------|--|------------|
| 4.8.2    | Examples of processes and published studies —  | <b>57</b>  |
| 4.9      | Miscellaneous devulcanisation processes —  | <b>60</b>  |
|          | References —   | <b>64</b>  |
| <b>5</b> | <b>Characterisation of devulcanised rubber and products containing devulcanised rubber —</b>                 | <b>71</b>  |
| 5.1      | Characterisation of devulcanised rubber —  | <b>71</b>  |
| 5.1.1    | Chemical analysis tests that can be carried out on waste rubber prior to devulcanisation —                   | <b>72</b>  |
| 5.1.2    | Tests that can be carried out to assess the quality of devulcanised rubber —                                 | <b>73</b>  |
| 5.1.3    | Tests that can be carried out to determine processing properties of devulcanised rubber —                    | <b>74</b>  |
| 5.1.4    | Tests that can be carried out to obtain physical properties of vulcanisates containing devulcanised rubber — | <b>74</b>  |
| 5.2      | Characterisation of products manufactured from devulcanised rubber —   | <b>75</b>  |
| 5.2.1    | Introduction —   | <b>75</b>  |
| 5.2.2    | Published results —  | <b>76</b>  |
| 5.2.2.1  | DevulCO <sub>2</sub> and ReMould research projects —   | <b>76</b>  |
| 5.2.2.2  | DeLink —   | <b>80</b>  |
| 5.2.2.3  | Levgum —   | <b>83</b>  |
| 5.2.2.4  | Rubber resources (formerly called vredestein rubber recycling) —   | <b>84</b>  |
| 5.2.2.5  | Miscellaneous processes —  | <b>84</b>  |
| 5.2.2.6  | Comparative studies —  | <b>87</b>  |
|          | References —   | <b>89</b>  |
| <b>6</b> | <b>Production of rubber crumb —</b>  | <b>91</b>  |
| 6.1      | Introduction —   | <b>91</b>  |
| 6.2      | Methods for the production of rubber crumb —   | <b>93</b>  |
| 6.2.1    | Preparation of waste rubber products prior to grinding or crumbing —   | <b>95</b>  |
| 6.2.2    | Cryogenic processes —  | <b>95</b>  |
| 6.2.3    | Water processes —  | <b>96</b>  |
| 6.2.4    | Ambient processes —  | <b>101</b> |
| 6.3      | Sieving of rubber crumb —  | <b>104</b> |
| 6.4      | Quality control monitoring of rubber crumb and products containing rubber crumb —                            | <b>104</b> |
| 6.4.1    | The WRAP quality protocol and guidance documents —   | <b>105</b> |
| 6.4.1.1  | UK WRAP quality protocol —   | <b>105</b> |
| 6.4.1.2  | Good practice for the storage of rubber crumb —  | <b>107</b> |

|         |  |
|---------|--|
| 6.4.1.3 | Good practice for unbound applications of tyre- derived rubber materials in sensitive environments – UK WRAP quality protocol — <b>108</b>             |
| 6.4.1.4 | Good practice for unbound, sports, recreation and leisure applications in close proximity to aquatic receptors – UK WRAP quality protocol — <b>108</b> |
| 6.4.1.5 | Good practice for unbound civil engineering applications of tyre-derived rubber materials – UK WRAP quality protocol — <b>109</b>                      |
| 6.4.2   | Quality standards — <b>109</b>   |
| 6.4.2.1 | The production of rubber crumb — <b>109</b>  |
| 6.4.2.2 | Properties of rubber crumb — <b>109</b>  |
| 6.4.2.3 | The use of rubber crumb in civil engineering and landfill engineering applications — <b>111</b>  |
| 6.5     | Sintering techniques to produce products from rubber crumb — <b>113</b>  |
| 6.6     | Activation of rubber crumb — <b>118</b>  |
|         | References — <b>122</b>  |

## **7 Products made from rubber crumb and waste rubber — 125**

|       |  |
|-------|--|
| 7.1   | Introduction — <b>125</b>                                  |
| 7.2   | In blends with thermoplastics — <b>126</b>                 |
| 7.3   | In blends with rubber compounds — <b>131</b>               |
| 7.4   | Use in construction products — <b>135</b>                  |
| 7.4.1 | Concrete products — <b>135</b>                             |
| 7.4.2 | Bitumen and asphalt products — <b>137</b>                  |
| 7.4.3 | Gypsum and screed products — <b>141</b>                    |
| 7.4.4 | Roofing products — <b>141</b>                              |
| 7.4.5 | Sound and vibration insulation products — <b>143</b>       |
| 7.4.6 | Miscellaneous products for construction — <b>145</b>       |
| 7.5   | Use in sports and other recreational surfaces — <b>147</b> |
| 7.6   | Miscellaneous uses — <b>151</b>                            |
|       | References — <b>154</b>                                    |

## **8 Other methods for recycling and re-using waste rubber — 159**

|       |  |
|-------|--|
| 8.1   | Reclaiming process — <b>159</b>  |
| 8.2   | Pyrolysis products — <b>159</b>  |
| 8.2.1 | Introduction — <b>159</b>  |
| 8.2.2 | Pyro-gas and oil — <b>162</b>  |
| 8.2.3 | Recovered carbon black — <b>162</b>  |
| 8.3   | Depolymerisation to produce monomers and low-molecular-weight compounds — <b>166</b> |
| 8.4   | Generation of energy by incineration — <b>167</b>                                    |
|       | References — <b>169</b>  |

**9 Conclusion — 171**

**Appendix 1 Brief overview of regulations applying to waste rubber  
in the European Union and the USA — 173**

- A1.1 Introduction — 173
- A1.2 Situation in the United Kingdom — 173
  - A1.2.1 Is end-of-life tyre rubber regarded as a waste product or not? — 173
  - A1.2.2 Waste shipment regulation (EC/1013/2006) — 174
- A1.3 Situation in the European Union — 174
  - A1.3.1 European waste catalogue — 174
  - A1.3.2 REACH treatment of waste materials — 174
  - A1.3.3 REACH treatment of aromatic process oils in tyres — 175
  - A1.3.4 REACH treatment of devulcanised rubber, polymers, preparations  
and blends — 175
- A1.4 Situation in the USA — 175
  - References — 176
