Preface — V

Contributors — XI

Gavin Burke, Elaine Kenny, Maurice Dalton, Declan M. Devine, Eilish Hoctor, Ian Major and Luke Geever

1 Biodegradation and biodegradable polymers — 1

1.1 Introduction — 1
1.2 Natural biodegradable polymers — 4
1.3 Synthetic biodegradable polymers — 5
1.4 Polylactic acid — 7
1.5 Polycaprolactone — 9
1.6 Polyglycolic acid — 11
1.7 Polydioxanone — 12
1.8 Polyhydroxyalkanoates — 13
1.9 Summary — 13
Bibliography — 13

Yuanyuan Chen, Marcelo Jorge Cavalcanti De Sá, Maurice Dalton and Declan M. Devine

2 Biodegradable medical implants — 17

2.1 Introduction — 17
2.2 Biodegradable sutures — 18
2.3 Bone-fixation devices — 20
2.4 Fully biodegradable stents — 24
2.5 Biodegradable anti-adhesive tissue barriers — 29
2.6 Tissue engineering — 31
2.6.1 Bone tissue engineering — 32
2.6.2 Repair of peripheral nerves — 35
2.7 Summary — 39
References — 39

Gabriel Goetten de Lima, Shane Halligan, Luke Geever, Maurice Dalton, Chris McConville and Michael J.D. Nugent

3 Controlled release of poorly soluble active ingredients from bioresorbable polymers — 47

3.1 Introduction — 47
3.2 Poorly water-soluble drugs — 48
3.3 Mechanisms of drug release from biodegradable polymers — 50
3.4 Polymers for controlled release of poorly water-soluble drugs — 52

Bibliografische Informationen
http://d-nb.info/1178822818

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

3.4.1 Controlled release from water-soluble/bioresorbable hydrogels — 52
3.4.2 Controlled release from polymeric micelles — 53
3.5 Recent strategies for poorly water-soluble drugs — 55
3.5.1 Hydrogels/polymeric micelles — 55
3.5.2 Nanocomposite hydrogels — 57
3.6 Stimuli-responsive hydrogels — 58
3.6.1 Hydrogels that are responsive to temperature — 59
3.6.2 Hydrogels that are responsive to pH — 61
3.6.3 Combining pH and temperature-responsive hydrogels — 62
3.7 Applications of stimuli-responsive hydrogels — 62
3.7.1 Injectable hydrogels in drug delivery — 63
3.8 Summary — 64
References — 64

Martin Forde and Ian Major
4 Potential for biodegradable polymer-based nanotechnology in drug delivery — 69
4.1 Introduction — 69
4.2 The bio-nano interface — 70
4.3 Size and shape matter — 71
4.3.1 Polymeric nanoparticles — 71
4.4 Silver nanoparticles conjugated with polymers — 72
4.4.1 Silver nanoparticles for gene technology — 73
4.4.2 Silver nanoparticles for rheumatoid arthritis — 73
4.5 Gold nanoparticles conjugated with polymers — 74
4.6 Platinum nanoparticles conjugated with polymers — 75
4.7 Other polymer non-metal nanoparticles for smart drug delivery — 77
4.8 Biomedical implants — 78
4.8.1 Neuronal implants — 79
4.8.2 Cochlear and neural implants — 80
4.9 Toxicity of nanoparticles – a major concern — 80
4.10 Summary — 82
References — 83

Ian Major, Elaine Kenny, Andrew Healy, Luke Geever, Declan M. Devine and John Lyons
5 Processing of biodegradable polymers — 87
5.1 Introduction — 87
5.2 Hot-melt extrusion — 87
5.3 Injection moulding — 89

5.4 Fused deposition modelling — 90
5.5 Special considerations for hot-melt processing bioresorbable polymers — 93
5.5.1 Polylactic acid — 93
5.5.2 Polycaprolactone — 95
5.5.3 Polyglycolic acid — 96
5.6 Summary — 96
References — 97

Emily Crowley, Maurice Dalton and Gavin Burke
6 Cytotoxicity and biocompatibility of bioresorbable polymers — 101
6.1 Introduction — 101
6.2 Foreign-body reaction — 102
6.3 Natural biomaterials — 104
6.3.1 Alginate — 104
6.3.2 Chitosan — 105
6.3.3 Hyaluronic acid — 106
6.4 Synthetic biomaterials — 108
6.4.1 Polylactic acid — 108
6.4.2 Polyglycolic acid — 113
6.4.3 Polycaprolactone — 114
6.4.4 Polyethylene glycol — 115
6.4.5 Polyvinyl alcohol — 116
6.4.6 Polyvinylpyrrolidone — 116
6.5 Summary — 117
References — 117

Abbreviations — 121

Index — 125
