

Contents

1	Introduction and Motivation	1
1.1	Programme	1
1.2	Short Overview of the Different Logics	2
1.2.1	Nonmonotonic Logics	2
1.2.2	Theory Revision	3
1.2.3	Theory Update	4
1.2.4	Deontic Logic	6
1.2.5	Counterfactual Conditionals	6
1.2.6	Modal Logic	7
1.2.7	Intuitionistic Logic	8
1.2.8	Inheritance Systems	8
1.2.9	A Summarizing Table for the Semantics	8
1.3	A Discussion of Concepts	10
1.3.1	Basic Semantic Entities, Truth Values, and Operators	10
1.3.2	Algebraic and Structural Semantics	12
1.3.3	Restricted Operators and Relations	15
1.3.4	Copies in Preferential Models	16
1.3.5	Further Remarks on Universality of Representation Proofs	17
1.3.6	$\vdash$ in the Object Language?	17
1.3.7	Various Considerations on Abstract Semantics	20
1.3.8	A Comparison with Reiter Defaults	21
1.4	IBRS	21
1.4.1	Definition and Comments	21
1.4.2	The Power of IBRS	25
1.4.3	Abstract Semantics for IBRS and Its Engineering Realization	26
2	Basic Definitions and Results	31
2.1	Algebraic Definitions	31
2.2	Basic Logical Definitions	34
2.3	Basic Definitions and Results for Nonmonotonic Logics	35

3	Abstract Semantics by Size	53
3.1	The First-Order Setting	53
3.2	General Size Semantics	54
3.2.1	Introduction	54
3.2.2	Main Table	55
3.2.3	Coherent Systems	64
3.2.4	Size and Principal Filter Logic	69
4	Preferential Structures – Part I	73
4.1	Introduction	73
4.1.1	Remarks on Nonmonotonic Logics and Preferential Semantics	73
4.1.2	Basic Definitions	77
4.2	Preferential Structures Without Domain Conditions	87
4.2.1	General Discussion	87
4.2.2	Detailed Discussion	94
5	Preferential Structures – Part II	119
5.1	Simplifications by Domain Conditions, Logical Properties	119
5.1.1	Introduction	119
5.1.2	Smooth Structures	119
5.1.3	Ranked Structures	123
5.1.4	The Logical Properties with Definability Preservation	124
5.2	$\mathcal{A}$ -Ranked Structures	125
5.2.1	Representation Results for $\mathcal{A}$ -Ranked Structures	125
5.3	Two-Sequent Calculi	131
5.3.1	Introduction	131
5.3.2	Plausibility Logic	131
5.3.3	A Comment on the Work by Arieli and Avron	133
5.4	Blurred Observation – Absence of Definability Preservation	134
5.4.1	Introduction	134
5.4.2	General and Smooth Structures Without Definability Preservation	138
5.4.3	Ranked Structures	143
5.5	The Limit Variant	145
5.5.1	Introduction	145
5.5.2	The Algebraic Limit	147
5.5.3	The Logical Limit	149
6	Higher Preferential Structures	157
6.1	Introduction	157
6.2	The General Case	162
6.3	Discussion of the Totally Smooth Case	167
6.4	The Essentially Smooth Case	169
6.5	Translation to Logic	173

7	Deontic Logic and Hierarchical Conditionals	175
7.1	Semantics of Deontic Logic	175
7.1.1	Introductory Remarks	175
7.1.2	Basic Definitions	179
7.1.3	Philosophical Discussion of Obligations	186
7.1.4	Examination of the Various Cases	193
7.1.5	What Is An Obligation?	197
7.1.6	Conclusion	198
7.2	A Comment on Work by Aqvist	198
7.2.1	Introduction	198
7.2.2	There Are (At Least) Two Solutions	199
7.2.3	Outline	201
7.2.4	$G \vdash A$ Implies $G \vdash A$ (Outline)	205
7.3	Hierarchical Conditionals	205
7.3.1	Introduction	205
7.3.2	Formal Modelling and Summary of Results	209
7.3.3	Overview	211
7.3.4	Connections with Other Concepts	212
7.3.5	Formal Results and Representation for Hierarchical Conditionals	214
8	Theory Update and Theory Revision	219
8.1	Update	219
8.1.1	Introduction	219
8.1.2	Hidden Dimensions	219
8.2	Theory Revision	227
8.2.1	Introduction to Theory Revision	227
8.2.2	Booth Revision	236
8.2.3	Revision and Independence	244
8.2.4	Preferential Modelling of Defaults	249
8.2.5	Remarks on Independence	250
9	An Analysis of Defeasible Inheritance Systems	251
9.1	Introduction	251
9.1.1	Terminology	251
9.1.2	Inheritance and Reactive Diagrams	251
9.1.3	Conceptual Analysis	257
9.2	Introduction to Nonmonotonic Inheritance	258
9.2.1	Basic Discussion	258
9.2.2	Directly Sceptical Split Validity Upward Chaining Off-Path Inheritance	262
9.2.3	Review of Other Approaches and Problems	269
9.3	Defeasible Inheritance and Reactive Diagrams	270
9.3.1	Summary of Our Algorithm	270

9.3.2	Overview	272
9.3.3	Compilation and Memorization	273
9.3.4	Executing the Algorithm	273
9.3.5	Signposts	274
9.3.6	Beyond Inheritance	274
9.4	Interpretations	275
9.4.1	Introduction	275
9.4.2	Informal Comparison of Inheritance with the Systems <i>P</i> and <i>R</i>	276
9.4.3	Inheritance as Information Transfer	277
9.4.4	Inheritance as Reasoning with Prototypes	281
9.5	Detailed Translation of Inheritance to Modified Systems of Small Sets	284
9.5.1	Normality	284
9.5.2	Small Sets	285
Bibliography		295
Index		299
