

Contents

Introduction and Foreword	5
Chapter 1. Historical Development (Up to 1961)	7
Chapter 2. Continuum Models	15
2.1. The Continuum Model of Linder.	15
2.2. The Continuum Model of De Montgolfier.	19
2.3. The McRae Formula.	23
Chapter 3. Pair Interaction Models σ_w	24
3.1. The Binary Collision Gas Model of Raynes, Buckingham and Bernstein.	24
3.2. The Cage Model	27
3.3. Kromhout and Linder's Quantum Mechanical Model	28
3.4. A Preliminary Comparison of the Various Models Suggested for σ_w	31
Chapter 4. Other Experimental Proton σ_w Data	32
Chapter 5. The Physical Nature of the Field $\overline{F^2}$ and of the Associated Excitation Energy	39
5.1. The Bothner-By Method	39
5.2. The Raynes-Buckingham-Bernstein (RBB) Method	40
5.3. Linder's Model	43
5.4. De Montgolfier's Method	44
5.5. The Method of Kromhout and Linder	44
5.6. An Empirical Test	44

Chapter 6.	The Site Factor	46
6.1.	The Solute Site Factor of Rummens <i>et al.</i>	46
6.2.	The Solute-Solvent Site Factor of Raynes	50
6.3.	The Solute Site Factor of De Montgolfier	51
Chapter 7.	The Repulsion Effect	53
7.1.	The Repulsion Formulation in the Binary Gas Collision Model; Application to Effects on Protons	53
7.2.	Repulsion Effects in ^{19}F σ_{w} Shifts	55
7.3.	Repulsion Effects in ^{129}Xe	56
7.4.	Pressure Effects on σ_{w}	58
Chapter 8.	The Effects of Higher Order Dispersion Terms	59
Chapter 9.	The Parameters B	
9.1.	Marshall and Pople's Calculation of B for an H Atom	61
9.2.	Calculation of B for H Atoms and Rare-gas Atoms According to Jameson, Jameson and Gutowsky	62
9.3.	σ_{w} of Two Interacting H Atoms According to Marshall and Pople	63
9.4.	The Perturbation Calculations of Yonemoto	65
9.5.	Kromhout and Linder's Calculation	66
9.6.	Empirical Determinations of B for Atoms and Non-polar Molecules	68
Chapter 10.	σ_{w} in Dense Media	70
10.1.	The Effects of Higher Order Collisions in Gases	70
10.2.	The Gas-Liquid Transition	72
Chapter 11.	The Temperature Dependence of σ_{w}	73
11.1.	The Intramolecular Temperature Effect	73
11.2.	$d\sigma_{\text{w}}/dt$ in Gases	77
11.3.	$d\sigma_{\text{w}}/dt$ in Liquids	79
Chapter 12.	Factor Analysis	81
12.1.	Introduction to the Formalism	81
12.2.	Medium Effects as Product Functions	84
12.3.	Applications of Factor Analysis	85
12.4.	Criticism of the Factor Analysis Method	87
Chapter 13.	^{19}F σ_{w} Studies	90
Chapter 14.	σ_{w} of Nuclei other than ^1H and ^{19}F	94
14.1.	σ_{w} of ^{13}C and ^{29}Si	94
14.2.	σ_{w} of ^{31}P	96
14.3.	σ_{w} of ^{129}Xe	97

Chapter 15.	Alternate Referencing Systems	98
15.1.	Internally Referenced σ_w Data	98
15.2.	Externally Referenced Measurements	101
15.3.	χ_M and the Bulk Susceptibility Correction σ_b	102
Chapter 16.	On the Required Molecular Parameters and Physical Constants	106
16.1.	Bulk Properties	106
16.2.	Molecular Properties	107
16.3.	The Lennard-Jones (6–12) Force Constants ϵ/k and r_0 and the Functions $\mathcal{H}_6(\nu)$ and S_6^g	109
