Contents - I. Fundamentals

Part I Fundamentals

1 Variational Principles 3
1.1 Prehistory 3
1.2 Mopertuis Variational Principle 11
1.3 Euler's Calculus of Variations 15
1.4 Lagrange Variational Principle 20
1.5 Jacobi Variational Principle 26
1.6 Hamilton Variational Principle 26
1.7 Hamiltonian Equations 32
1.8 Physical Meaning of the Least Action Principle 36

2 Thermodynamics 45
2.1 Thermodynamic Description 45
2.2 Temperature 47
2.3 Entropy 51
2.4 Entropy and Probability 59
2.5 Gibbs Principles 59
2.6 Nonequilibrium Processes 60
2.7 Secondary Thermodynamics and Higher Order Thermodynamics .. 64

3 Continuum Mechanics 67
3.1 Continuum Kinematics 67
3.2 Basic Laws of Continuum Mechanics 93
3.3 Classical Continuum Models 98
3.4 Thermodynamic Formalism 112

4 Principle of Least Action in Continuum Mechanics 117
4.1 Variation of Integral Functionals 117
4.2 Variations of Kinematic Parameters 121

Bibliografische Informationen
http://d-nb.info/990358542

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.3 Principle of Least Action 125
4.4 Variational Equations 128
4.5 Models with High Derivatives 134
4.6 Tensor Variations 136

5 Direct Methods of Calculus of Variations 149
5.1 Introductory Remarks 150
5.2 Quadratic Functionals 163
5.3 Existence of the Minimizing Element 167
5.4 Uniqueness of the Minimizing Element 168
5.5 Upper and Lower Estimates 172
5.6 Dual Variational Principles 178
5.7 Legendre and Young-Fenchel Transformations 181
5.8 Examples of Dual Variational Principles 201
5.9 Hashin-Strikman Variational Principle 216
5.10 Variational Problems with Constraints 224
5.11 Variational-Asymptotic Method 243
5.12 Variational Problems and Functional Integrals 270
5.13 Miscellaneous 278

Part II Variational Features of Classical Continuum Models

6 Statics of a Geometrically Linear Elastic Body 285
6.1 Gibbs Principle 285
6.2 Boundedness from Below 289
6.3 Complementary Energy 293
6.4 Reissner Variational Principle 294
6.5 Physically Linear Elastic Body 294
6.6 Castigliano Variational Principle 298
6.7 Hashin-Strikman Variational Principle 306
6.8 Internal Stresses 318
6.9 Thermoelasticity 321
6.10 Dislocations 323
6.11 Continuously Distributed Dislocations 328

7 Statics of a Geometrically Nonlinear Elastic Body 341
7.1 Energy Functional 341
7.2 Gibbs Principle 350
7.3 Dual Variational Principle 355
7.4 Phase Equilibrium of Elastic Bodies 369

8 Dynamics of Elastic Bodies 375
8.1 Least Action vs Stationary Action 375

8.2 Nonlinear Eigenvibrations 377
8.3 Linear Vibrations: The Rayleigh Principle 379
8.4 The Principle of Least Action in Eulerian Coordinates 381

9 Ideal Incompressible Fluid 389
9.1 Least Action Principle 389
9.2 General Features of Solutions of Momentum Equations 392
9.3 Variational Principles in Eulerian Coordinates 396
9.4 Potential Flows 405
9.5 Variational Features of Kinetic Energy in Vortex Flows 408
9.6 Dynamics of Vortex Lines 414
9.7 Quasi-Two-Dimensional and Two-Dimensional Vortex Flows 427
9.8 Dynamics of Vortex Filaments in Unbounded Space 433
9.9 Vortex Sheets 444
9.10 Symmetry of the Action Functional and the Integrals of Motion 446
9.11 Variational Principles for Open Flows 453

10 Ideal Compressible Fluid 455
10.1 Variational Principles in Lagrangian Coordinates 455
10.2 General Features of Dynamics of Compressible Fluid 457
10.3 Variational Principles in Eulerian Coordinates 461
10.4 Potential Flows 468
10.5 Incompressible Fluid as a Limit Case of Compressible Fluid 470

11 Steady Motion of Ideal Fluid and Elastic Body 473
11.1 The Kinematics of Steady Flow 473
11.2 Steady Motion with Impenetrable Boundaries 475
11.3 Open Steady Flows of Ideal Fluid 479
11.4 Two-Dimensional Flows 483
11.5 Variational Principles on the Set of Equivortical Flows 484
11.6 Potential Flows 490
11.7 Regularization of Functionals in Unbounded Domains 493

12 Principle of Least Dissipation 495
12.1 Heat Conduction 495
12.2 Creeping Motion of Viscous Fluid 498
12.3 Ideal Plasticity 502
12.4 Fluctuations and Variations in Steady Non-Equilibrium Processes . 505

13 Motion of Rigid Bodies in Fluids 509
13.1 Motion of a Rigid Body in Creeping Flow of Viscous Fluid 509
13.2 Motion of a Body in Ideal Incompressible Fluid 514
13.3 Motion of a Body in a Viscous Fluid 521

Appendices 531
A. Holonomic Variational Equations 531
B. On Variational Formulation of Arbitrary Systems of Equations 538
C. A Variational Principle for Probability Density 543
D. Lagrange Variational Principle 549
E. Microdynamics Yielding Classical Thermodynamics 553

Contents - II. Applications

Part III Some Applications of Variational Methods to Development of Continuum Mechanics Models

14 Theory of Elastic Plates and Shells 589
14.1 Preliminaries from Geometry of Surfaces 590
14.2 Classical Shell Theory: Phenomenological Approach 598
14.3 Plates 620
14.4 Derivation of Classical Shell Theory from Three-Dimensional Elasticity 626
14.5 Short Wave Extrapolation 640
14.6 Refined Shell Theories 642
14.7 Theory of Anisotropic Heterogeneous Shells 665
14.8 Laminated Plates 679
14.9 Sandwich Plates 688
14.10 Nonlinear Theory of Hard-Skin Plates and Shells 701

15 Elastic Beams 715
15.1 Phenomenological Approach 715
15.2 Variational Problem for Energy Density 725
15.3 Asymptotic Analysis of the Energy Functional of Three-Dimensional Elasticity 741

16 Some Stochastic Variational Problems 751
16.1 Stochastic Variational Problems 751
16.2 Stochastic Quadratic Functionals 756
16.3 Extreme Values of Energy 761
16.4 Probability Distribution of Energy: Gaussian Excitation 768
16.5 Probability Distribution of Energy: Small Excitations 771
16.6 Probability Distribution of Energy: Large Excitations 789
16.7 Probability Distribution of Linear Functionals of Minimizers 797
16.8 Variational Principle for Probability Densities 801

17 Homogenization 817
17.1 The Problem of Homogenization 817
17.2 Homogenization of Periodic Structures 818
17.3 Some Non-asymptotic Features of Homogenization Problem 833
17.4 Homogenization of Random Structures 840
17.5 Homogenization in One-Dimensional Problems 849
17.6 A One-Dimensional Nonlinear Homogenization Problem: Spring Theory 856
17.7 Two-Dimensional Structures 862
17.8 Two-Dimensional Incompressible Elastic Composites 875
17.9 Some Three-Dimensional Homogenization Problems 883
17.10 Estimates of Effective Characteristics of Random Cell Structures in Terms of that for Periodic Structures 892

18 Homogenization of Random Structures: a Closer View 899
18.1 More on Kozlov's Cell Problem 899
18.2 Variational Principle for Probability Densities 918
18.3 Equations for Probability Densities 922
18.4 Approximations of Probability Densities 927
18.5 The Choice of Probabilistic Measure 931
18.6 Entropy of Microstructure 934
18.7 Temperature of Microstructure 939
18.8 Entropy of an Elastic Bar 943

19 Some Other Applications 961
19.1 Shallow Water Theory 961
19.2 Models of Heterogeneous Mixtures 966
19.3 A Granular Material Model 976
19.4 A Turbulence Model 978
