

Table of Contents

1 Dynamics of Electric Field Domains in Superlattices	
<i>by L.L. Bonilla</i>	1
1.1 Introduction	1
1.2 Steady States	5
1.2.1 Undoped Photoexcited SL, $\nu = 0, \gamma > 0$	7
1.2.2 Doped SL, $\nu > 0, \gamma \geq 0$	7
1.3 Phase Diagram and PC Time-Dependent Oscillations	7
1.3.1 Undoped Photoexcited SL, $\nu = 0, \gamma > 0$	7
1.3.2 Doped SL, $\nu > 0, \gamma \geq 0, 0 < c \ll 1$	11
1.4 Asymptotics	13
1.5 Final Remarks	18
2 Oscillatory Transport Instabilities and Complex Spatio-Temporal Dynamics in Semiconductors	
<i>by E. Schöll, A. Wacker</i>	21
2.1 Introduction	21
2.2 Current Filaments in Crossed Electric and Magnetic Fields	23
2.3 Spiking in Layered Semiconductor Structures	30
2.3.1 Modelling the Dynamic Behaviour	31
2.3.2 Results	33
2.4 Field Domains in Superlattices	36
2.4.1 The Model	36
2.4.2 Static Characteristic	38
2.4.3 Spatio-Temporal Oscillations	40
2.5 Conclusions	42
3 Space Charge Instabilities and Nonlinear Waves in Extrinsic Semiconductors	
<i>by S.W. Teitsworth, M.J. Bergmann, L.L. Bonilla</i>	46
3.1 Introduction	46
3.2 Full Rate Equation Model	48
3.3 Non-Dimensionalization and the Reduced Model	51

3.4	The Case of Time-Independent (dc) Current Bias	54
3.4.1	Steady States and the J - E Curve	54
3.4.2	Periodic, Solitary and Monotone Wave Solutions	56
3.4.3	Dynamical Stability of Periodic, Solitary and Monotone Waves	58
3.5	The Case of dc Voltage Bias	60
3.5.1	Position-Dependent Steady States	60
3.5.2	Numerical Studies of Solitary Waves	62
3.5.3	Stability Analysis and Hopf Bifurcations from the Steady State	66
3.6	Concluding Remarks	68
4	Autosolitons in Form of Current Filaments and Electric Field Domains in Semiconductors and Devices	
	<i>by B.S. Kerner</i>	70
4.1	Introduction	70
4.2	Formation of Current Filaments and Electric Field Domains in Semiconductors with Positive Differential Conductivity	72
4.2.1	Current Filaments in Transistor Structures	72
4.2.2	Multi-Filament Current States in Reverse-Biased P - N Structures	74
4.2.3	Current Filaments in Dense Electron Hole-Plasmas	77
4.2.4	Electric Field Domains in Hot Electron Hole-Plasmas	80
4.3	Local Active and Damping Processes. Concept of "Activator" and "Inhibitor"	83
4.3.1	Possibility of the Appearance of Current Filaments or Electric Field Domains and Form of the Current-Voltage Characteristic of Semiconductors	84
4.3.2	An Activator-Inhibitor Model	86
4.4	Autosolitons in Semiconductors	86
4.4.1	Form of Autosolitons	86
4.4.2	Basic Types of Autosolitons	89
4.5	Some Properties of Autosolitons	96
4.5.1	Main Types of Self-Organization Phenomena	96
4.5.2	"Nucleation Centre" for the Spontaneous Formation of Autosolitons in Semiconductors	97
4.5.3	Effects Determining the Evolution of Autosolitons	99
4.5.4	Processes of Random Appearance and Disappearance of Autosolitons	103
4.5.5	Transitions Between Different Types of Autosolitons	103
4.5.6	On Mechanisms of Spatiotemporal Chaos (Turbulence) in Semiconductors	105
4.6	Conclusions	106

5 Pattern Formation of the Electroluminescence in AC ZnS:Mn Devices

by *Ch. Goßen, F.-J. Niedernostheide, H.-G. Purwins* 112

5.1	Introduction	112
5.2	Experimental Set-Up	113
5.3	Electroluminescence Basics	114
5.4	Experimental Results	116
5.4.1	Stationary Microfilaments and Hysteresis	116
5.4.2	Frontpropagation	117
5.4.3	Autowaves	119
5.4.4	Mobile Filaments and Strings	120
5.4.5	Global Spatiotemporal Oscillations	123
5.4.6	Summary of Experimental Results	126
5.5	Discussion	127
5.5.1	Formation of Microfilaments	127
5.5.2	Comparison with Reaction-Diffusion Systems	128
5.6	Conclusions	131

6 Structure Formation in Charge Density Wave Systems

by *M.J. Bünner, G. Heinz, A. Kittel, J. Parisi* 133

6.1	The Peierls Transition	133
6.2	Materials	134
6.3	The Electronic Transport in CDW Systems	135
6.4	Structure Formation of CDW Systems	137
6.4.1	Metastability, Memory, and Hysteresis	137
6.4.2	Intermittent Oscillations and S-Shaped Negative Differential Resistance	139
6.4.3	Narrow-Band Noise and Broad-Band Noise	140
6.4.4	Mode-Locking	141
6.5	Conclusion and Outlook	142

7 Current Filamentation in Dipolar Electric Fields

by *V. Novák, W. Prettl* 144

7.1	Introduction	144
7.2	Stationary Current Filaments in a Dipolar Electric Field	145
7.2.1	Experimental Setup	145
7.2.2	Large-Area Filament Reconstruction	147
7.2.3	One-Dimensional Model of a Large-Area Filament	148
7.2.4	Magnetic Field in the One-Dimensional Model	153
7.2.5	Equal-Areas Rule for Coexistence Field	155
7.2.6	Bendable Filament	157
7.3	Filamentary Structure under Interband Illumination	158
7.3.1	Dynamic Behaviour of Illuminated Samples	158
7.3.2	Hypothesis on the Underlying Mechanism	162
7.3.3	Large Time Scale Dynamic Behaviour	165
7.4	Conclusions	166

8 Spatiotemporal Patterns and Generic Bifurcations in a Semiconductor Device

by *F.-J. Niedernostheide*

168

8.1	Introduction	168
8.2	Measuring Techniques	170
8.3	Experimentally Observed Bifurcation Sequences by Increasing the DC Voltage Bias	172
8.3.1	The Current-Voltage Characteristic	172
8.3.2	Transition of a Spatially Uniform State to a Static Local- ized Filament	172
8.3.3	Transition of a Static to a Rocking Filament	174
8.3.4	Period-Doubling Cascade and Chaotic Filament Motions	175
8.3.5	Transition of a Rocking to a Travelling Filament	177
8.4	Influence of Other Parameters on the Dynamical Behaviour	179
8.4.1	Frequency-Locking and Quasiperiodicity	179
8.4.2	Influence of the Temperature	181
8.4.3	Influence of a Magnetic Field	182
8.5	Model and Physical Mechanism	183
8.5.1	Two-Layer Model	183
8.5.2	Activation, Inhibition, Competition	186
8.6	Numerical Results	187
8.6.1	Bifurcations to Static, Breathing, Travelling and Chaot- ically Oscillating Filaments by Using Homogeneous Neu- mann Boundary Conditions	188
8.6.2	Influence of the Time Constants	194
8.6.3	Bifurcations to Static, Rocking and Travelling Filaments by Using Mixed Boundary Conditions	194
8.7	Summary and Conclusions	197

9 Current Filamentation in P-I-N Diodes: Experimental Observations and an Equivalent Circuit Model*

by *R. Symanczyk*

200

9.1	Introduction	200
9.2	Theoretical Description	202
9.2.1	Double Injection with Deep Traps	202
9.2.2	Equivalent Circuit Model	204
9.3	Stationary Pattern Formation	206
9.3.1	Experimental Technique	207
9.3.2	Observations and Comparison	208
9.4	Spatio-Temporal Dynamics	211
9.4.1	Periodic Oscillations	212
9.4.2	Nonperiodic Oscillations	214
9.5	Conclusion	216

**10 Nonlinear and Chaotic Charge Transport in
Semi-Insulating Semiconductors**

<i>by V.A. Samuilov</i>	220
10.1 Introduction	220
10.2 Materials and Experimental Procedure	221
10.2.1 GaAs	222
10.2.2 InP	222
10.2.3 Polycrystalline Si	223
10.2.4 Porous Si	224
10.3 Results and Discussion	225
10.3.1 GaAs	225
10.3.2 InP	226
10.3.3 Polycrystalline Si	233
10.3.4 Porous Si	235
10.4 Model of LFO in Crystalline Semi-Insulating Semiconductors with Deep Levels	238
10.5 Conclusions	245

**11 Technical Applications of a 2-D Optoelectronic
P-N-P-N Winner-Take-All Array***

<i>by C.V. Radehaus, H. Willebrand</i>	250
11.1 Introduction	250
11.2 The Winner-Take-All Network	251
11.2.1 Maximum Identification	256
11.3 Applications of the WTA Network	258
11.3.1 Vander Lugt Correlator with WTA Maximum Identification	258
11.3.2 WTA Networks and Fuzzy Logic	259
11.3.3 Minimum Identification	262
11.3.4 Optical Neural Network	263
11.4 Concluding Remarks	265
