Preface	xiii
Acknowledgements	xv
1 Knowledge-Based Systems: An Overview	1
Aims of the Book	1
Computing Systems and Design	2
What are KBS?	4
Historical Perspective	5
Types of KBS	7
Successful KBS Applications	9
Will KBS Freeze Expertise? – The Deskilling Argument	10
Attitudes to “Computer Mistakes”	11
Will KBS Make Experts or Others Redundant?	12
What will be the Benefits of Design KBS?	13
2 Knowledge	15
Objectives	15
Introduction	15
What is Knowledge?	15
Types of Knowledge	17
Application to Design	18
Further Classifications of Knowledge	19
Algorithmic Knowledge and Heuristics	19
Simple Example	20
Examples from Design	20
The Basis of Heuristics	22
KBS Heuristics	23
Classification of Heuristics	24
Short-Cut Heuristics	25
Heuristics Based on Background Knowledge	26
Heuristics Based on Ill-Defined Concepts	26
Heuristics Based on Empirical Data	26
Heuristics Provided by Others	27
Replacement of Heuristics	27
An Example	28
Deep and Shallow Knowledge	30
Meta-Knowledge	31

Bias In Human Decision Making	32
Consequences of Bias	33
Conclusions	34
3 Uncertainty	35
Objectives	35
Introduction	35
Sources of Uncertainty	36
Uncertainty in KBS Development	37
How do People Deal with Uncertainty?	37
The Case for Pessimism	37
The Optimistic View	38
The Applicability of Representing Uncertainty in KBS	39
Design Versus Diagnostic Systems	39
How Do your Experts Deal with Uncertainty?	40
Is Uncertainty Relevant in Your Domain?	40
Does Uncertainty Representation Breed Uncertainty?	41
How Subjective is Uncertainty?	41
Is it up to the Expert to Reason Uncertainty out of the Domain?	42
Uncertainty Management – An Overview	43
Representation and Propagation of Uncertain Information	44
Numerical Approaches	44
Probability	44
Bayesian Probabilities	45
Certainty Factors	46
The Dempster–Shafer Theory of Evidence	48
Fuzzy Logic	49
Non-Numerical Approaches	50
Logic-Based Approaches to Uncertainty Representation	51
Non-Formal Representations of Uncertainty	52
Conclusions	53
4 Design	55
Objectives	55
Introduction	55
Chapter Contents	55
An Overview of Design	55
Definitions of Design	57
Historical and Sociological Perspectives	58
Components of Design	59
Classes of Design	59
Subsections of Design	60
The Effect of Profession and Organisation	62
Types of Profession	62
Organisational Structures	63
Design: The Reality	65
Introduction	65
Are Designers Aware of How They Design?	65
Protocol Analysis	65
So How Do Designers Design?	66

Memory, Notes and Sketches	69
Chunking of Knowledge and Recall	70
Summary of "Real Design"	72
Systematic Design	73
Introduction	73
Origins of/Motivation for Systematic Design	73
Systematic Design: An Example	74
Clarification of the Task	74
Conceptual Design	74
Embodiment and Detail Design	77
Systematic Design: A Summary and a Comparison	77
Design and KBS	78
Positive Arguments	78
Negative Arguments	81
The Place of Design KBS	82
5 Knowledge Acquisition and Interpretation	83
Objectives	83
Introduction	83
Assessing Your Target Domain	84
Identification of Users and their Requirements	85
Choosing the Right Experts	85
Can the System Developer be the Expert?	85
What Makes an Expert "Right"?	86
Finding Co-operative Companies	86
Finding the Individual Experts	87
The Inarticulate Expert	87
The Sceptical Expert	87
The Expert Who Fears Replacement or Redundancy	88
The Non-Committal Expert	88
The Out-of-Date Expert	88
The Inaccessible Expert	89
The Expert Who Doubts His/Her Own Expertise	89
The "Fake" Expert	90
Single or Multiple Experts?	90
Advantages of Using More than One Expert	91
Reduced Inaccessibility	91
Alternative Source for Explanations	92
Two Different Approaches to the Domain Available	92
Less Chance of Missing Vital Information	93
Elicitation of the Exceptions to the Rule	93
Preferences Owing to Familiarity Counterbalanced	93
Reduction in Time	93
Immediate Verification Procedure	94
Disadvantages of Using Multiple Experts	94
Possibility of Clashes of Information	94
Questioning of Integrity	95
Covering the Same Ground Twice	95
The Importance of Assessing How Your Experts Think	95
The Factors which Help You to Assess the Experts	96

Co-operation	97
Enthusiasm	97
Articulateness	97
Bias	97
Confidence	98
How Comfortable is Your Expert?	98
Choosing an Overall Approach to KE	98
Is Rapid Prototyping Suitable?	99
Interviewing Techniques	99
Unstructured Interviewing	99
Structured Interviewing	100
Alternative Interviewing Techniques	100
Pictorial Representations	100
Card Sorts	102
Repertory Grids/Triples	102
Questionnaires	104
Case Studies	104
Paper Models	105
Brainstorming	105
Role Playing	107
Choosing Interviewing Techniques	107
Recording and Interpreting the Knowledge	108
Transcript Analysis	108
Intermediate Representation Techniques	110
Forms of Intermediate Representation	110
Feedback	111
Conclusions	112
6 Knowledge Representation and Control	113
Objectives	113
Introduction	113
Artificial Intelligence	114
How do People Think?	114
Different Set of Interests When Developing KBS	115
Which Development System?	115
Languages	116
Symbolic Languages	116
Algorithmic Languages	116
C	117
Shells and Toolkits	117
Which Method of KR?	118
When to Choose the Form of Knowledge Representation	118
Approaches to Knowledge Representation	118
Object-Based Approaches	119
Semantic Networks	119
Frames	120
Object Oriented Programming	122
Rule-Based Representation	123
Predicate and Logic Programming	125
Control and Search Mechanisms	126

Backward Chaining	126
Forward Chaining	127
Hybrid Control Structures	128
Search Strategies	128
Depth First Search	129
Breadth First Search	130
Other Search Techniques	130
Genetic Algorithms	131
Constraint Logic Programming	132
Rule Selection	132
Meta-Rules	133
Decision Lattices	133
Conclusions	134
7 Evaluation of Practical Systems	135
Objectives	135
Introduction	135
Evaluation, Verification and Validation	136
Evaluation	136
Validation	136
Verification	137
Why Bother with Evaluation?	137
Why is Evaluation Important for Design KBS?	138
The Difficulties with Evaluation	139
How these Difficulties can be Overcome	140
Evaluation of Other Systems	141
Considerations in Evaluation	141
Objective Standards	142
Bias	142
User Orientation	143
Efficiency	143
Interaction of Knowledge	143
Realistic Time Demand on the Evaluators	144
An Overall Summary of the Basic Approaches to Evaluation	144
Using Case Studies	144
Using Experts	145
Using a Broad Range of Interviewing Techniques and Reviewers	145
The Reviewers	146
The Evaluation Process	147
When to Evaluate	147
Preliminary Evaluation	148
If Rapid Prototyping has not been used	148
When Rapid Prototyping has been used	149
Long-Term Evaluation	149
User Interaction	151
Aims of the User Interaction	151
Acquiring and Assessing the Evaluation Information	152
The Diary	152
Follow-Up Interviews	152
Listing of Comments	153

The Analysis of the Information Obtained	153
The Importance of Feedback in Evaluation	154
Summary and Conclusions	155
8 Examples of the Implementation of KBS for Conceptual Design	157
Objectives	157
Introduction	157
Literature Review of Design KBS	158
The Evolution of Design Knowledge-Based Systems	158
Some Recent Examples of Design KBS	160
Example 1: A Progressive System	160
Example 2: The Benefits of Using a Restricted Domain	161
Example 3: Systems Using Co-operating Agents	162
Example 4: Case-Based Reasoning	163
Detailed Applications	165
Case Study 1	165
Introduction	165
Choice of Domain and Aims of the System	166
Software and Hardware	167
System Features	171
An Example of a System Consultation	173
Future Developments	179
Case Study 2	179
Introduction	179
Choice of Domain	180
Aims of the System	181
Sources of Knowledge	182
User Interaction	182
Style of Knowledge Elicitation	183
System Development	184
Knowledge Representation	185
System Features	186
User Interface	190
The Help Facility	193
An Example of a System Consultation	196
Evaluation	198
Future Developments	199
Case Study 3	199
Introduction	199
Initial Work	200
Setting up the Domain	201
System Objectives	201
Hardware/Software	202
Knowledge Elicitation	203
Knowledge Base	203
System Features	204
The Input	205
The Analysis	207
The Output	207
An Example	209

Future Developments	213
Conclusions	213
9 Future Developments	215
Objectives	215
Introduction	215
The Overall Form of Design Systems	216
Data Exchange	216
Small is Beautiful?	217
Product Models	218
KBS for Conceptual Design	219
Prescriptive or Reactive?	219
What Form of Knowledge Base?	220
Uncertainty	221
Combining Advanced Computing Techniques	222
Improving the Acceptance of KBS in Industry	222
Evaluation	223
Increased Interaction with Industry	223
Increased User Involvement and Control	223
Conclusions	224
References	225
Index	241
