

Table of Contents

Invited Lectures

<i>Towards automatic parallelization of logic programs</i> K.R. Apt	1
<i>Functional algorithm design</i> R.S. Bird	2
<i>Mathematics of software engineering</i> M. Broy	18
<i>Program construction in intuitionistic type theory</i> T. Coquand	49
<i>Computer-aided computing</i> N. Shankar	50

Contributed Lectures

<i>Derivation of parallel algorithms from functional specifications to CSP processes</i> A.E. Abdallah	67
<i>Architecture independent massive parallelization of divide-and-conquer algorithms</i> K. Achatz, W. Schulte	97
<i>Exploring summation and product operators in the refinement calculus</i> R.-J.R. Back, M. Butler	128
<i>An action system specification of the Caltech asynchronous microprocessor</i> R.-J.R. Back, A.J. Martin, K. Sere	159
<i>Formal derivation of CSP programs from temporal specifications</i> R. Berghammer, B. von Karger	180
<i>A compositional proof system for asynchronously communicating processes</i> F.S. de Boer, M. van Hulst	197
<i>A graphical calculus</i> S. Curtis, G. Lowe	214

<i>A simple, efficient, and flexible implementation of flexible arrays</i> V.J. Dielissen, A. Kaldewaij	232
<i>Induction and recursion on datatypes</i> H. Doornbos, R. Backhouse	242
<i>Program construction by parts</i> M. Frappier, A. Mili, J. Desharnais	257
<i>An initial-algebra approach to directed acyclic graphs</i> J. Gibbons	282
<i>Algebraic proof assistants in HOL</i> R. Groenboom, C. Hendriks, I. Polak, J. Terlouw, J. Tijmen Udding	304
<i>Angelic termination in Dijkstra's calculus</i> W.H. Hesselink	322
<i>Extracting programs with exceptions in an impredicative type system</i> J.-F. Monin	335
<i>Synthesizing proofs from programs in the calculus of inductive constructions</i> C. Parent	351
<i>A general scheme for breadth-first graph traversal</i> M. Russling	380
<i>SPECWARE: Formal support for composing software</i> Y. V. Srinivas, R. Jüllig	399
<i>A refinement relation supporting the transition from unbounded to bounded communication buffers</i> K. Stølen	423
<i>ImpUNITY: UNITY with procedures and local variables</i> R. T. Uddink, J. N. Kok	452
